APPLICATION FOR PERMIT TO DRILL, DEEPEN, OR PLUG BACK

1a. Type of Work

DRILL  DEEPEN  PLUG BACK

b. Type of Well

Oil Well  Gas Well  Other Coalbed Methane Single Zone  Multiple Zone

2. Name of Operator 214/750-8888 5950 Berkshire Lane, #600  
PG & E Resources Company Dallas, TX 75225

3. Address of Operator 13585 Jackson Drive  
Permitco Inc. - Agent Denver, CO 80241

4. Location of Well (Report location clearly and in accordance with any State requirements.\*)  
At surface 1999' FSL and 2006' FEL

At proposed prod. zone Sec. 11 NWSE

14. Distance in miles and direction from nearest town or post office\*  
15 miles north of Price, Utah

15. Distance from proposed\* location to nearest property or lease line, ft. (Also to nearest drlg. line, if any) 1999'

16. No. of acres in lease 800

17. No. of acres assigned to this well 160

18. Distance from proposed\* location to nearest well, drilling, completed, or applied for, on this lease, ft. 1700'

19. Proposed depth 5165'

20. Rotary or cable tools Rotary

21. Elevations (Show whether DF, RT, GR, etc.)  
7252' GR

22. Approx. date work will start\*  
Immediately upon approval of this application.

23. PROPOSED CASING AND CEMENTING PROGRAM

Size of Hole	Size of Casing	Weight per Foot	Setting Depth	Quantity of Cement
12-1/4"	9-5/8"	36#	500'	265 sx or suffic to circ to surf.
8-3/4"	7" *	26#	5165'	475 sx, stage tool at 3200'

PG & E Resources Company proposes to drill a well to 5165' to test the Blackhawk and Star Point Coals for coalbed methane. If productive, casing will be run and the well completed. If dry, the well will be plugged and abandoned as per State of Utah requirements.

TECHNICAL REVIEW  
Engr. [Signature] 8/18/92  
Geol. [Signature]  
Surface [Signature]

See Drilling Program attached.

Bond coverage for this well is provided under Bond No. 8063-38-07 and 8057-26-00.

\* This well may be considered in the future for possible use as a water disposal well. If so, the appropriate UIC application will be filed with the Division of Oil, Gas & Mining.

IN ABOVE SPACE DESCRIBE PROPOSED PROGRAM: If proposal is to deepen or plug back, give data on present productive zone and proposed new productive zone. If proposal is to drill or deepen directionally, give pertinent data on subsurface locations and measured and true vertical depths. Give blowout preventer program, if any.

**Permitco Incorporated**  
A Petroleum Permitting Company

The subject well is being drilled to test the Blackhawk and Star Point Coals for Coalbed Methane. If this well is productive, it may also be considered for use as a water disposal well. If so, the required UIC application will be filed with the Division of Oil, Gas & Mining.

1. Formation Tops

The estimated tops of important geologic markers are as follows:

<u>Formation</u>	<u>Depth</u>
Flagstaff	Surface
Price River	2892'
Castlegate	3369'
Blackhawk	3663'
Kenilworth (S.P. I)	4382'
Aberdeen (S.P. II)	4585'
T.D.	5165'

2. Casing Program

The proposed casing program will be as follows:

<u>Purpose</u>	<u>Depth</u>	<u>Hole Size</u>	<u>O.D.</u>	<u>Weight</u>	<u>Grade</u>
Surface	0-500'	12-1/4"	9-5/8"	36#	K-55
Produc.	0-5165'	8-3/4"	7"	26#	N-80

Casing design subject to revision based on geologic conditions encountered.

3. Cement Program

The cement program will be as follows:

Surface  
0-500'

Type and Amount

Cement to surface with 265 sx Premium Cement + 2% CaCl<sub>2</sub> + 0.25 #/sk Flocele (or equivalent). Centralizers will be run on bottom 3 joints plus every 4th joint to surface.

Production

Type and Amount

Two stage cement to surface w/stage tool at 3200'. First Stage: 300 sx 50/50 Pozmix + 2% Gel + .25% Flocele. Second Stage: 175 sx Silica Lite + 4% Gel + 4% CaCl<sub>2</sub>.

4. Drilling Fluids

The proposed circulating mediums to be employed in drilling are as follows:

<u>Interval</u>	<u>Mud Type</u>	<u>Mud Wt.</u>	<u>Visc.</u>	<u>FL</u>	<u>PH</u>
0-500'	Air/Spud Mud	8.4-9.0	32-50	N/C	8.0-9.0
500-3500'	FW w/Gel Sweeps	8.4-8.8	28-32	N/C	8.0-9.0
3500-5165'	FW-LSND	8.6-9.0	34-45	10-15	8.0-9.0

5. Testing, Logging and Coring

The anticipated type and amount of testing, logging and coring are as follows:

- a. No drill stem tests are planned.

- b. The logging program will consist of a Cased Hole Dual Spaced Neutron w/Gamma Ray, 2" & 5" from T.D. to Base of Surface Casing and an Acoustic CBL/CCL, - 5" from T. D. to Base of Surface casing.
- c. No cores are anticipated.

6. Spud Date/Drilling Time

- a. Drilling is planned to commence upon approval of this application.
- b. It is anticipated that the drilling of this well will take approximately 20 days (4 days - Spudder rig; 16 days Drill rig).

7. Road Use/Water Source

- a. All access is located on Private or County Roads. The Carbon County Road Department has been contacted for use of County Roads. Surface use agreements will be reached with the other land owners for use of access roads and drillsite.
- b. Produced water from five producing wells in the immediate area will be used for drilling. The location of the existing water pits are as follows:
  - 1) N 540' E 1900' from SW cor.. Sec. 11, T12S - R10E
  - 2) N 793' W 780' from SE cor., Sec. 11, T12S - R10E
  - 3) S 1980' E 1780' from NW cor.. Sec. 14, T12S - R10E
  - 4) S 660' W 2340' from NE cor., Sec. 14, T12S - R10E
  - 5) S 1980' W 800' from NE cor., Sec. 14, T12S - R10E

The proposed water sources are located on private lands. A Temporary Change application (#t92-91-12) is on file with the Utah Division of Water Rights for use of these water sources.

8. BOP Requirements

PG & E's minimum specifications for pressure control equipment are as follows:  
Ram Type: 10" Hydraulic double, 2000 psi w.p.

Ram type preventers and associated equipment shall be tested to approved stack working pressure if isolated by test plug or to 70 percent of internal yield pressure of casing. Pressure shall be maintained for at least 10 minutes or until requirements of test are met, whichever is longer. If a test plug is utilized, no bleed-off pressure is acceptable. For a test not utilizing a test plug, if a decline in pressure of more than 10 percent in 30 minutes occurs, the test shall be considered to have failed. Valve on casing head below test plug shall be open during test of BOP stack.

As a minimum, the above test shall be performed:

- a. when initially installed;
- b. whenever any seal subject to test pressure is broken
- c. following related repairs; and
- d. at 30-day intervals

Valves shall be tested from working pressure side during BOPE tests with all down stream valves open.

When testing the kill line valve(s) the check valve shall be held open or the ball removed.

Pipe and blind rams shall be activated each trip, however, this function need not be performed more than once a day.

Pressure tests shall apply to all related well control equipment.

All of the above described tests and/or drills shall be recorded in the drilling log.

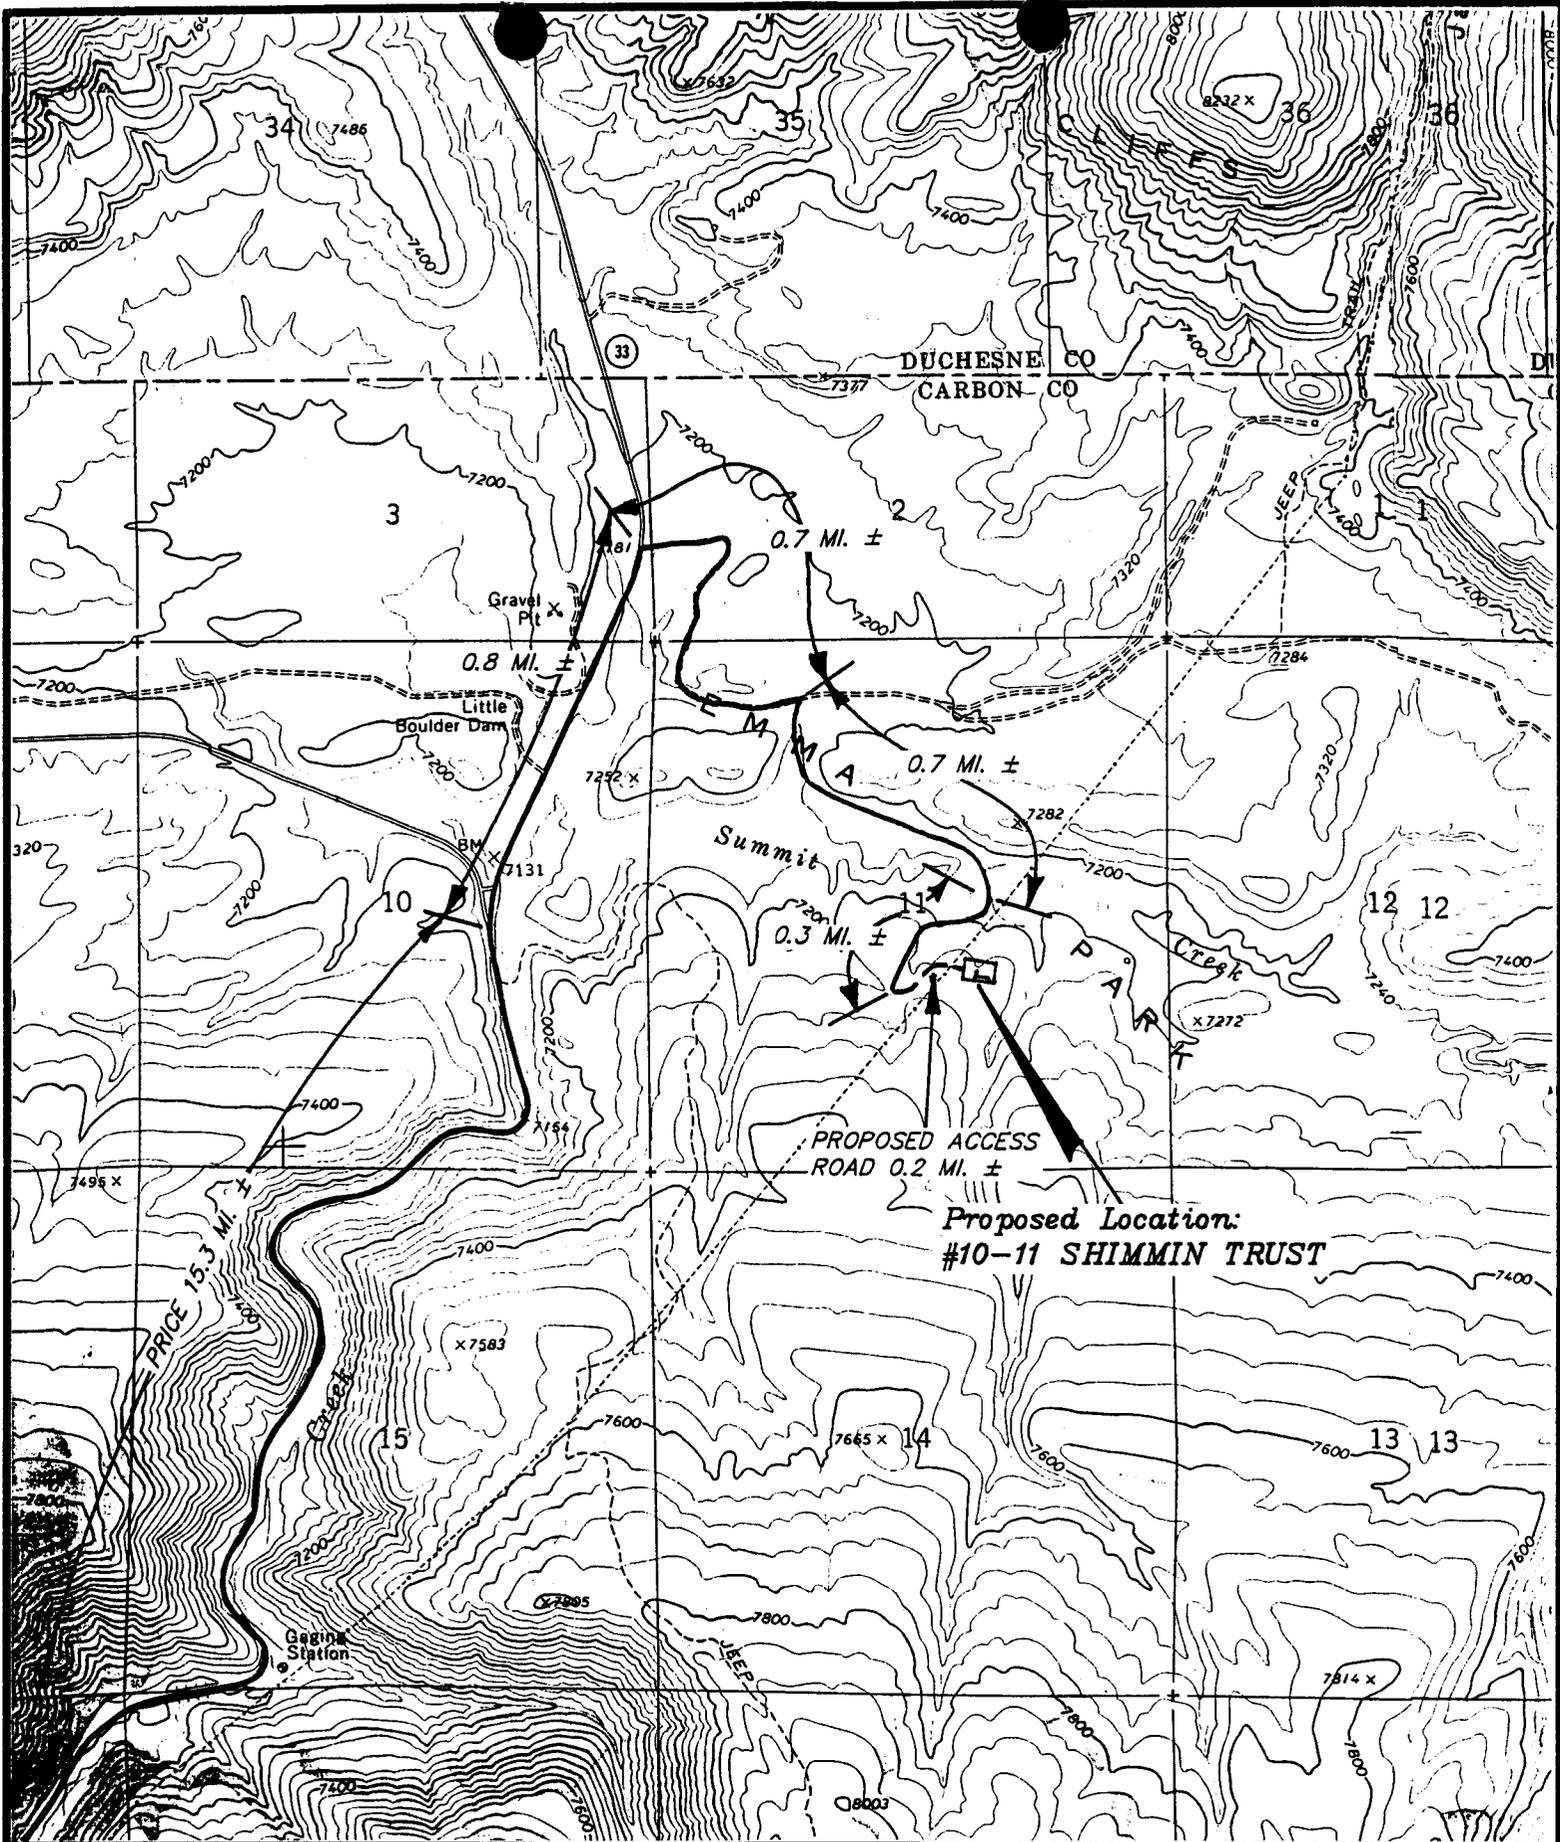

BOP systems shall be consistent with API RP53. Pressure tests will be conducted before drilling out from under casing strings which have been set and cemented in

place. Blowout preventer controls will be installed prior to drilling the surface casing plug and will remain in use until the well is completed or abandoned. Preventers will be inspected and operated at least daily to ensure good mechanical working order, and this inspection will be recorded on the daily drilling report. Preventers will be pressure tested before drilling casing cement plugs.

- a. The size and rating of the BOP stack is shown on the attached diagram.
- b. A choke line and a kill line are to be properly installed. The kill line is not to be used as a fill-up line.
- c. The accumulator system shall have a pressure capacity to provide for repeated operation of hydraulic preventers.
- d. Drill string safety valve(s), to fit all tools in the drill string, are to be maintained on the rig floor while drilling operations are in progress.

9. Anticipated Pressures

- a. The expected maximum bottom hole pressure is 2242 psi (.434 psi/ft). The maximum surface pressure is 1105 psi (based on partially evacuated hole at 0.22 psi/ft.)
- b. No hydrogen sulfide gas or abnormal pressures are anticipated.

Castlegate Prospect  
Application for Temporary Change  
of Water  
Carbon County, Utah

Dear Tammi,

Enclosed please find one copy of the Application for Temporary Change of Water for PG & E's Castlegate Prospect in Carbon County, Utah.

As you know, several Applications for Permit to Drill have already been submitted and several additional applications will be forthcoming.

In future applications I will reference the Change Application Number (t92-91-12 (91 Area), rather than send additional copies of this application.

If you should need additional information, please feel free to contact me.

Sincerely,

PERMITCO INC.

WATER RIGHTS

For the purpose of obtaining permission to make a temporary change of water in the State of Utah, application is hereby made to the State Engineer, based upon the following showing of facts, submitted in accordance with the requirements of Section 73-3-3 Utah Code Annotated 1953, as amended.

\*WATER RIGHT NO. 91 Area \_\_\_\_\_ \*APPLICATION NO. 92-91-12

Changes are proposed in (check those applicable)

point of diversion.  place of use.  nature of use.  period of use.

1. OWNER INFORMATION

Name: West Hazmat Oil Field Services Inc. \*Interest: \_\_\_\_\_ %  
Address: East Highway 40  
City: Roosevelt State: Utah Zip Code: 84066

2. \*PRIORITY OF CHANGE: July 31, 1992 \*FILING DATE: July 31, 1992

\*Is this change amendatory? (Yes/No): No

3. RIGHT EVIDENCED BY: 91-366, Cert.#a229, Morse Decree First Class

Prior Approved Temporary Change Applications for this right: t91-91-09; t92-91-03; t92-91-04;  
t92-91-05; t92-91-09; t92-91-10.

\*\*\*\*\* HERETOFORE \*\*\*\*\*

4. QUANTITY OF WATER: 7.98 cfs and/or \_\_\_\_\_ ac-ft.

5. SOURCE: Price River

6. COUNTY: Carbon

7. POINT(S) OF DIVERSION: \_\_\_\_\_  
S. 560 ft. & E. 680 ft. from N $\frac{1}{2}$  Cor. Sec. 1, T14S, R9E, SLB&M.

Description of Diverting Works: Concrete diversion dam, earthen ditches

8. POINT(S) OF REDIVERSION

The water has been rediverted from \_\_\_\_\_ at a point: \_\_\_\_\_

Description of Diverting Works: \_\_\_\_\_

9. POINT(S) OF RETURN

The amount of water consumed is 7.98 cfs or \_\_\_\_\_ ac-ft.

The amount of water returned is \_\_\_\_\_ cfs or \_\_\_\_\_ ac-ft.

The water has been returned to the natural stream/source at a point(s): \_\_\_\_\_

DRILLING LOCATION ASSESSMENT

State of Utah  
Division of Oil, Gas and Mining

OPERATOR: PG&E RESOURCES CO. WELL NAME: #10-11 SHIMMIN TRUST  
SECTION: 11 TWP: 12S RNG: 10E LOC: 1999 FSL 2006 FEL  
QTR/QTR NE/SW COUNTY: CARBON FIELD: COALBED METHANE  
SURFACE OWNER: SHIMMIN TRUST  
SPACING: 460 F SECTION LINE 460 F QTR/QTR LINE 920 F ANOTHER WELL  
GEOLOGIST: BRAD HILL DATE AND TIME: 7/20/92 15:00

PARTICIPANTS: Lisa Smith-Permitco, Dean Shimmin-Landowner, Robert Kay-Uintah Engineering

REGIONAL SETTING/TOPOGRAPHY: The proposed location is on the western edge of the Book Cliffs physiographic province. It is located on the Flagstaff dip slope. The uphill side of the location is flat and the downhill side is sloped.

LAND USE:

CURRENT SURFACE USE: Domestic grazing and wildlife habitat.

PROPOSED SURFACE DISTURBANCE: The proposed pad is rectangular in shape with approximate dimensions of 340'X 200' including a 130'X 50' reserve pit. Approximately .2 miles of new road will be constructed for access.

AFFECTED FLOODPLAINS AND/OR WETLANDS: None

FLORA/FAUNA: Sage, Rabbitbrush, Bunch grass, Lupine, Skyrocket  
Gillia/Cows, Deer, Elk, Rabbits, Rodents, Birds

ENVIRONMENTAL PARAMETERS

SURFACE GEOLOGY

SOIL TYPE AND CHARACTERISTICS: Clayey-silt with abundant limestone fragments.

SURFACE FORMATION & CHARACTERISTICS: Quaternary alluvium and Flagstaff Limestone.

EROSION/SEDIMENTATION/STABILITY: No active erosion or sedimentation at present. Location should be stable.

PALEONTOLOGICAL POTENTIAL: None observed.

## SUBSURFACE GEOLOGY

OBJECTIVES/DEPTHS: Blackhawk-3663', Kenilworth-4382',  
Aberdeen-4585'

ABNORMAL PRESSURES-HIGH AND LOW: None anticipated.

CULTURAL RESOURCES/ARCHAEOLOGY: NA

CONSTRUCTION MATERIALS: Onsite materials will be used for  
construction.

SITE RECLAMATION: As per land owner instructions.

### RESERVE PIT

CHARACTERISTICS: A rectangular reserve pit will be constructed  
with approximate dimensions of 130'X 50'X 10'.

LINING: The reserve pit is to be evaluated after construction to  
determine if a synthetic liner is required.

MUD PROGRAM: 0-500'-air/spud mud; 500'-3500'-FW w/Gel Sweeps;  
3500'-5165'-FW-LSND

DRILLING WATER SUPPLY: Drilling water will be from the existing  
Shimmins Trust wells.

### STIPULATIONS FOR APD APPROVAL

The reserve pit is to be evaluated after construction.  
The down hill side of the location is to be bermed to prevent run  
off from the location.

### ATTACHMENTS

Photographs will be placed on file.

Dallas, Texas 75225

Gentlemen:

Re: Shimmin Trust #10-11 Well, 1999 feet from the south line, 2006 feet from the east line, NW 1/4 SE 1/4, Section 11, Township 12 South, Range 10 East, Carbon County, Utah

Pursuant to Utah Admin. R. 649-3-2, Location and Siting of Wells and Utah Admin. R. 649-3-4, Permitting of Wells to be Drilled, Deepened or Plugged-Back, approval to drill the referenced well is hereby granted.

In addition, the following specific actions are necessary to fully comply with this approval:

1. PG & E Resources Company, as designated operator, is the bonded principal in reference to this Application for Permit to Drill. Should this designation change or a transfer of ownership occur, liability will remain with the designated operator until the division is notified by letter of a new bonded principal.
2. The reserve pit should be inspected after construction to determine if a synthetic liner is required.
3. The downhill side of the location should be bermed to prevent runoff from the location.
4. Compliance with the requirements of Utah Admin. R. 649-1 et seq., Oil and Gas Conservation General Rules.
5. Notification within 24 hours after drilling operations commence.

Page 2  
PG & E Resources Company  
Shimmin Trust #10-11 Well  
September 9, 1992

6. Submittal of Entity Action Form, Form 6, within five working days following commencement of drilling operations and whenever a change in operations or interests necessitates an entity status change.
7. Submittal of the Report of Water Encountered During Drilling, Form 7.
8. Prompt notification prior to commencing operations, if necessary, to plug and abandon the well. Notify Frank R. Matthews, Petroleum Engineer, (Office) (801)538-5340, (Home) (801)476-8613, or R.J. Firth, Associate Director, (Home) (801)571-6068.
9. Compliance with the requirements of Utah Admin. R. 649-3-20, Gas Flaring or Venting, if the well is completed for production.

Trash and sanitary waste should be properly contained and transported to approved disposal locations, not retained in or disposed of in pits on location or downhole. Prior to the commencement of drilling operations, the operator should consult the local/county sanitarian and/or the Department of Environmental Quality, Division of Drinking Water/Sanitation, regarding appropriate disposal of sanitary waste.

This approval shall expire one year after date of issuance unless substantial and continuous operation is underway or a request for an extension is made prior to the approval expiration date. The API number assigned to this well is 43-007-30167.

Sincerely,

R.J. Firth  
Associate Director, Oil and Gas

---ooOoo---

THE STATE OF UTAH TO ALL PERSONS INTERESTED IN THE ABOVE ENTITLED MATTER.

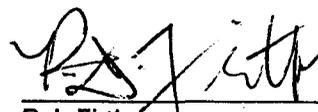

Notice is hereby given that the Division is commencing an informal adjudicative proceeding to consider the application of PG & E Resources Company for administrative approval of the Jensen 16-10, Jensen 9-10, Shimmin Trust 11-11, and Shimmin Trust 10-11 Wells, located in Sections 10 and 11, Township 12 South, Range 10 East, Carbon County, Utah, for conversion to Class II injection wells. The proceeding will be conducted in accordance with Utah Admin. R.649-10, Administrative Procedures.

The interval from 4730 feet to 4869 feet (Spring Canyon Sand of the Mesa Verde Group) will be selectively perforated for water disposal. The average injection pressure is estimated to be 1500 psig or less with a maximum requested injection pressure of 2000 psig. The estimated injection volume will be approximately 6500 barrels of water per day.

Any person desiring to object to the application or otherwise intervene in the proceeding, must file a written protest or notice of intervention with the Division within fifteen days of the date of publication of this notice. If such a protest or notice of intervention is received, a hearing may be scheduled before the Board of Oil, Gas and Mining. Protestants and/or intervenors should be prepared to demonstrate at the hearing how this matter affects their interests.

DATED this 17th day of February, 1993.

## I. OVERVIEW

The purpose of the Castlegate CBM Project is to develop and exploit the Coal Bed Methane associated with the Blackhawk Coal in Carbon County, Utah. The Methane will be produced through twenty five (25) wells which have already been drilled. Of these twenty five (25) wells, only seven (7) have been completed to date. Six (6) wells have been completed in the Blackhawk Coal as producers and one (1) well has been completed in the Spring Canyon Sand as an injection well. This well was utilized for injectivity testing. The remaining eighteen (18) wells are scheduled to be completed in 1993, at which time the project will be put on production.

Exploitation of the Methane from the Blackhawk Coal requires that the coal be dewatered. As the water is removed from the coal, the Methane will begin to disassociate and will be produced. The dewatering process will result in the initial production of approximately eighteen thousand seven hundred fifty (18,750) barrels of saltwater per day or seven hundred fifty (750) barrels per day per producing well. This water must then be disposed. The two options available for disposal of the water are to reduce the amount of Total Dissolved Solids (TDS) in the water and then discharge the water into the surface waters or to dispose the water into the Spring Canyon Sand through disposal wells.

PG&E Resources intends to inject the produced water into the Spring Canyon Sand. This would be accomplished by dually completing four (4) of the wells. These wells will produce from the Blackhawk through the upper tubing string and inject into the Spring Canyon Sand through the lower tubing string. The produced water will be filtered prior to injection to remove any coal fragments which may be present. Water Analysis of the produced water (6,500+ mg/l TDS) and Spring Canyon Sand formation water (10,520 mg/l TDS) indicate that the waters are compatible.

The success of the Castlegate CBM Project is dependent upon receiving authorization to use disposal wells to dispose of the produced water.

**IV. SHIMMIN TRUST #10-11**

**DIVISION OF OIL, GAS AND MINING  
UNDERGROUND INJECTION CONTROL PROGRAM**

**PERMIT  
DECISION DOCUMENT**

**Applicant:** PG&E Resources      **Location:** Castle Gate, Carbon County

**Well:** Jensen 16-10, Jensen 9-10,  
Shimmin Trust 10-11, Shimmin Trust 11-11

**Ownership Issues:** The proposed project is located in sections 10 and 11, township 12 south, range 10 east Carbon County, Utah. Surface ownership within the entire area is held by private individuals, except for a small parcel of land owned by the State of Utah. Mineral interests are held by private individuals, the State of Utah, and the federal government. PG&E Resources has submitted an affidavit stating that a copy of UIC form 1 was sent as notice to all surface owners within a 1/2 mile radius of each of the proposed injection wells.

**Well Integrity:** The four wells proposed for conversion to injection all have surface casing set at approximately 500 feet  $\pm$  30 feet, and were all cemented to surface. Production casing was set at a depth of approximately 6000 feet  $\pm$  75 feet, and were all cemented in two stages to surface. Cement bond logs will be run and submitted to the Division when the wells are converted to injection. The interval from 4730 feet to 4869 feet (Spring Canyon Sand of the Mesa Verde Group) will be selectively perforated for water disposal. All four wells will be dually completed. Production will be from the Blackhawk Formation through the upper 2 7/8" tubing and disposal will be into the Spring Canyon Sand through the lower 2 1/16" tubing and packer assembly. There are a total of 9 producing wells in the 1/2 mile area of review. All wells in the AOR have sufficient cement behind the production string and have adequate surface casing to prevent migration of fluid up the hole. At the time of conversion a retrievable packer will be set above the blackhawk perforations and the casing will be pressure tested. Casing/tubing annulus pressure will be monitored on a daily basis and reported on a monthly basis thereafter. Additional casing pressure tests shall be run every five years or whenever the tubing and packer assemblies are pulled for workover purposes.

**Ground Water Protection:** Surface geology of the area consists of Quaternary alluvium, Colton Formation, and Flagstaff Limestone. Ground water occurs in the alluvium, and in the sands and gravel of the Colton Formation. There are several springs located on the dip slope of the Flagstaff Formation and are probably seasonal depending on the amount of upgradient recharge. Water analysis reports indicate that the quality of the water is less than 10,000 mg/l down through the Blackhawk coals. Analyses of waters from the Spring Canyon Sand indicate an increase to over 11,000 mg/l. Existing casing and cement programs in the proposed injection wells and surrounding wells are adequate to protect any USDW's. The upper confining interval above the injection zone is composed of

interbedded sand, shale and siltstones of the Aberdeen and Kenilworth Formations. The lower confining zone is the Mancos Shale. A stress test was run on shales in both the upper and lower confining zones. Results of these tests indicate that the upper shales have a fracture gradient of .63 psi/ft, and the lower shales have a fracture gradient of .54 psi/ft. A seprate/falloff test on the Spring Canyon Sand indicated a fracture gradient of .51 psi/ft. A comparison of the above fracture gradients indicates that the Spring Canyon Sand will be bound by the shales above and below. Cross sections provided by PGE Resources show that the lateral extent of the confining intervals and the injection zone include the entire project area.

**Oil/Gas & Other Mineral Resources Protection:** PG&E Resources owns all mineral leases in the area of review. Injection of water into the Spring Canyon Sand should have no adverse affect on any other mineral interests.

**Bonding:** PG&E Resources is the operator of all wells within the project and has provided a statewide bond coverage in the amount of \$80,000.

**Actions Taken and Further Approvals Needed:** A public notice was published in both the Salt Lake Tribune and the Sun Advocate on 2-23-93. No objections were received in the 15 day comment period. Administrative approval was granted to convert the wells in accordance with conditions of the permit on 03-12-93.

INJECTION WELL APPLICATION

REVIEW SUMMARY

Applicant: PGE Resources Well: Shimmin Trust #10-11

Location: section 11 township 12S range 10E

API #: 43-007-30167 Well Type: disp. X enhanced recov.     

If enhanced recovery has project been approved by the Board? NA

Lease Type: Fee Surface Ownership: Shimmin Trust

Field: Wildcat Unit: - Indian Country: N

UIC Form 1: Yes Plat: Yes Wells in AOR: 4 Producing

Logs Available: Yes Bond Log: no

Casing Program: 9 5/8 C476', 7" C4990' Both string cemented to surface

Integrity Test: RAT will be run

Injection Fluid: H<sub>2</sub>O

Geologic Information: Spring Canyon ss. Injection Zone.

Analyses of Injection Fluid: Y Formation Fluid: Y Compat. Y

Fracture Gradient Information: 5/psi/ft Parting Pressure 2300 psi

Affidavit of Notice to Owners: needs notary.

Fresh Water Aquifers in Area: need info

Depth Base of Moderately Saline Water: ??

Confining Interval: manlius shale below, Aberdeen Above

Reviewer: D. Janis Date: 2-4/93

Gentlemen:

Re: Conversion of the Jensen 16-10, Jensen 9-10, Shimmin Trust 11-11, and Shimmin Trust 10-11 wells located in Sections 10 and 11, Township 12 South, Range 10 East, Carbon County, Utah, to Water Disposal Wells

In accordance with Utah Admin. R. 649-5-3-3, administrative approval for conversion of the referenced wells to Class II injection wells is granted.

The following actions are necessary to fully comply with this approval:

1. Compliance with the UIC requirements for operation, maintenance and reporting for Class II injection wells.
2. Conformance with all conditions of the submitted applications.

If you have any questions regarding this approval or the necessary requirements, please contact this office.

Sincerely,

R.J. Firth  
Associate Director, Oil and Gas

**SUNDRY NOTICES AND REPORTS ON WELLS**

Do not use this form for proposals to drill new wells, deepen existing wells, or to reenter plugged and abandoned wells.  
Use APPLICATION FOR PERMIT— for such proposals

1. Type of Well  
 Oil Well     Gas Well     Other (specify)

2. Name of Operator  
PG&E Resources Company

3. Address of Operator  
6688 N. Central Expwy., Dallas, TX 75206

4. Telephone Number  
214/750-3800

5. Location of Well  
Footage : See Attached Schedule "A" 43-007-30167    County : Carbon  
OO, Sec. T., R., M. : Skimmin Trust 10-11 Sec 11, T12S, R10E    State : UTAH

**12. CHECK APPROPRIATE BOXES TO INDICATE NATURE OF NOTICE, REPORT, OR OTHER DATA**

**NOTICE OF INTENT**  
(Submit in Duplicate)

- Abandonment
  - Casing Repair
  - Change of Plans
  - Conversion to Injection
  - Fracture Treat
  - Multiple Completion
  - Other Complete Wells
- New Construction
  - Pull or Alter Casing
  - Recompletion
  - Shoot or Acidize
  - Vent or Flare
  - Water Shut-Off

Approximate Date Work Will Start 05/01/93

**SUBSEQUENT REPORT**  
(Submit Original Form Only)

- Abandonment \*
  - Casing Repair
  - Change of Plans
  - Conversion to Injection
  - Fracture Treat
  - Other \_\_\_\_\_
- New Construction
  - Pull or Alter Casing
  - Shoot or Acidize
  - Vent or Flare
  - Water Shut-Off

Date of Work Completion \_\_\_\_\_

Report results of Multiple Completions and Recompletions to different reservoirs on WELL COMPLETION OR RECOMPLETION AND LOG form.  
\* Must be accompanied by a cement verification report.

**13. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)**

PG&E Resources Company requests approval for the attached Completion Procedure for the wells listed on Schedule "A". Daily reports will be furnished when completion operations commence.

RE: Jensen 10-11  
Section 11, T12S-R10E  
Carbon County, Utah

Gentlemen:

Attached is an original and two copies of Form 8 "Well Completion or Recompletion Report and Log" for each completion. The Jensen 10-11 has been completed as a gas well in the Blackhawk Coal Seam and as a SWD well in the Spring Canyon.

If you have any questions or need further information, please contact the undersigned at (214) 706-3640.

Very truly yours,

Cindy R. Keister  
Sr. Regulatory Analyst

## INSTRUCTIONS

This form should be completed in compliance with the Utah Oil and Gas Conservation General Rules. If not filed prior to this time, all logs, tests, and directional surveys as required by Utah Rules should be attached and submitted with this report.

ITEM 18: Indicate which elevation is used as reference for depth measurements given in other spaces on this form and on any attachments.

ITEMS 22 and 24: If this well is completed for separate production from more than one interval zone (multiple completion), so state in item 22, and in item 24 show the producing interval, or intervals, top(s), bottom(s) and name(s) for only the interval reported in item 33. Submit a separate report (page) on this form, adequately identified, for each additional interval to be separately produced, showing the additional data pertinent to such interval.

ITEM 29: "Sacks Cement": Attached supplemental records for this well should show the details of any multiple stage cementing and the location of the cementing tool.

ITEM 33: Submit a separate completion report on this form for each interval to be separately produced (see instruction for items 22 and 24 above).

37. SUMMARY OF POROUS ZONES: Show all important zones of porosity and contents thereof; cored intervals; and all drill-stem tests, including depth interval tested, cushion used, time tool open, flowing and shut-in pressures, and recoveries.				38. GEOLOGIC MARKERS		
Formation	Top	Bottom	Description, contents, etc.	Name	Top	
					Meas. Depth	True Vert. Depth
Black Hawk	3680'	4399'	Natural gas	Price River ss		2914'
				Castlegate ss		3378'
				Black Hawk		3680'
				Kenilworth ss		4400'
				Aberdeen ss		4597'
				Spring Canyon		4728'

**E. WELL LOGS**

The following well logs were run on the subject well by Halliburton Logging Services, Inc. and have been previously submitted to the Division of Oil, Gas and Mining:

<u>Date Logged</u>	<u>Type of Log</u>
October 9, 1992	Spectral Density - Dual Spaced Neutron Log
October 9, 1992	Dual Induction Guard Log

**F. CEMENT BOND LOG**

An Acoustic Cement Bond Log was run and has been previously submitted to the Division of Oil, Gas and Mining.

**G. CASING PROGRAM**

This well was drilled, casing was set and dually completed on July 30, 1993.

	<u>Surface Casing</u>	<u>Production Casing</u>	<u>DV Tool</u>
Hole Size	12-1/4"	8-3/4"	8-3/4"
Casing Size	9-5/8"	7"	7"
Weight (lbs/ft)	6	26 & 29	
Grade	J-55	N-80	
Setting Depth	476'	4,990'	3,290'
Amount of Cement	275 sacks	380 sacks	435 sacks
Type of Cement	Class G	50/50 Pozmix	Class G
Slurry Volume	327.25	501.6	1,435.3
Top of Cement	Surface	3,290'	Surface
Date Set	9-25-92	10-10-92	10-11-92
PBTD		4,902'	

**H. CASING TEST PROGRAM**

Before injection begins, the casing outside the tubing shall be tested to 1000 psi as required in R615-5-5.

**I. INJECTION FLUID**

The injection fluid will consist of produced water containing an average of 9,000 mg/l TDS. The saltwater is a byproduct of gas production from the Blackhawk Coal formation. The proposed daily injection rates are: maximum - 8,000 barrels per day, average - 5,000 barrels per day.

**J. INJECTION PRESSURES**

The proposed injection pressures are: maximum - 2,000 psig, average - 1,500 psig.

**K. REVIEW OF WELLS WITHIN 1/2 MILE RADIUS**

Listed below is a review of the casing and cement programs for the four (4) offset wells which are located within a one-half (1/2) mile radius of the Shimmin Trust #10-11 well. All of these wells have been cased and cemented in a manner which will prevent migration of the injection fluids up or down the wellbore and will prevent entry of injection fluids into improper zones.

**Shimmin Trust 1**

**L. GEOLOGIC DATA**

The proposed injection zone for the produced water from the Blackhawk Coal section using the Shimmin Trust No. 10-11 Well is in the Price River sandstone. The Price River is a Cretaceous age sandstone, siltstone and shale sequence of the Mesaverde Group that consists of fine to medium grained, sub-angular to sub-rounded, moderately to well sorted, slightly calcareous sand deposited in a fluvial environment. Sand thickness is approximately 150 feet over all, from 2945' - 3122' using a density porosity cut off of eight percent (8%). Confinement is provided by the massive Castlegate sandstone below, a very fine to fine grained fluvial sand and above, by the North Horn formation, a very fine to fine grained interbedded sand, shale, siltstone and mudstone deposited in a fluvial environment.

With the current well control, the lateral extent of the Price River sandstone includes the entire project area, (T12S-R10E).

At this time, there appears to be no structural or stratigraphic limitations which would effect the conveyance and/or storage of the injected water.

**M. INJECTIVITY DATA**

A Step Rate Test will be performed.

**N. AFFIDAVIT OF NOTIFICATION**

To whom it may concern:

Copies of the UIC Form 1 application for the Shimmin Trust #10-11 well have been mailed to the following on January 5, 1994.

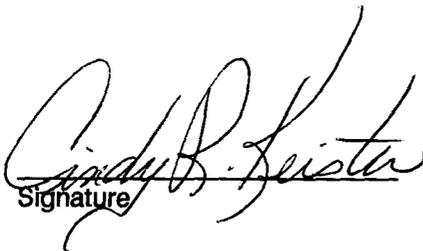

**OFFSET OPERATORS:**

None

Utah Division of Oil, Gas and Mining

Attachment to Sundry Notice and Report on Wells  
dated January 4, 1994.

Subject: Request of PG&E Resources Company for permission to  
recomplete and test for possible injection into the  
Shimmin Trust 10-11 well, sec. 11, T12S, R10E, Carbon,  
County.  
API = 43-007-30167

Conditions of Approval:

- 1) DOGM will be contacted prior to casing test and swabbing sample in #4 to allow opportunity for duplicate sample, testing and witnessing.
- 2) Results of testing must be provided to the Division. No injection will take place until water quality test results are obtained and discussed with appropriate DOGM staff.

**CASTLEGATE PROJECT  
CHANGE OF DISPOSAL ZONE  
SUMMARY OF WORKOVER PROCEDURES  
DECEMBER 30, 1993**

Shallow Zone Injection utilizing the Shimmin Trust No. 10-11.

**PROCEDURE**

1. MIRU Service Rig. Set isolation plug in the packer at 4652'. POOH w/ short and long strings.
2. RIH w/ work string; spot sand on packer. POOH. Run RBP and set at 3200'. Spot sand on the RBP; test RBP and casing to 1000 psi (give the Utah DOGM 24 hrs notice of test). Swab well to 2000'. POOH.
3. Perforate the Price River Sand from 2945' to 68' (23') and from 2995' to 3122' (127') at 2 spf using 4" casing guns.
4. RIH w/ test packer and work string; set packer at 2900'+/-. Test casing to 1000 psi. Swab well to obtain water sample.
5. Upon DOGM approval to inject water, acidize the Price River Sand with 3750 gal of 15% HCL.
6. Perform step rate test; continue injection for long term test (30 days).
7. Upon completion of the long term test and UIC permit approval, pull tubing, packer, and RBP. Retrieve the packer from 4652'.
8. Set CIBPs at 4710' and 4127'; dump 10' of cement on each CIBP.
9. Set the Otis Perma-Latch packer at 2900'+/- with the 2 7/8" work string. POOH.
10. RIH w/ 2 7/8" internally coated tubing and On-Off tool. Pressure test tubing and On-Off tool to 2500 psi. Pressure test the casing to 1000 psi. File casing integrity test form. Place well on injection.

BEFORE THE DIVISION OF OIL, GAS AND MINING  
DEPARTMENT OF NATURAL RESOURCES  
STATE OF UTAH

--ooOoo--

IN THE MATTER OF THE APPLICATION	:	NOTICE OF AGENCY ACTION
OF PG & E RESOURCES COMPANY	:	
FOR ADMINISTRATIVE APPROVAL OF	:	CAUSE NO. UIC-146
THE SHIMMIN TRUST 11-10 WELL	:	
LOCATED IN SECTION 11, TOWNSHIP	:	
12 SOUTH, RANGE 10 EAST, S.L.M.,	:	
CARBON COUNTY, UTAH, FOR	:	
CONVERSION TO A CLASS II	:	
INJECTION WELL	:	

--ooOoo--

THE STATE OF UTAH TO ALL PERSONS INTERESTED IN THE ABOVE ENTITLED MATTER.

Notice is hereby given that the Division of Oil, Gas and Mining ("Division") is commencing an informal adjudicative proceeding to consider the application of PG & E Resources Company ("PG & E") for administrative approval of the Shimmin Trust 11-10 Well, located in Section 11, Township 12 South, Range 10 East, Carbon County, Utah, for conversion to a Class II injection well. The proceeding will be conducted in accordance with Utah Admin. R.649-10, Administrative Procedures.

PG & E has proposed to inject fluids into the Price River Formation interval from 2,945 to 3,122 feet in the Shimmin Trust 11-10 disposal well. The injection fluid is water produced in conjunction with the extraction of coal bed methane gas from the Mesaverde Blackhawk Formation in the Castlegate Field area.

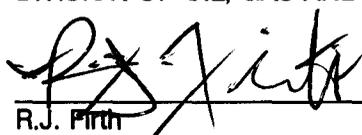

PG & E has perforated the Price River Formation interval and performed swab testing operations to obtain a water sample. The water analysis indicated the total dissolved solids (TDS) content of the Price River Formation water to be approximately 26,000 milligrams per liter (mg/l). Therefore, the disposal interval does not constitute an underground source of drinking water (USDW) and an aquifer exemption is not necessary.

The maximum allowable injection pressure and rate will be determined after conducting step-rate pressure testing following conversion of the well.

Any person desiring to object to the application or otherwise intervene in the proceeding, must file a written protest or notice of intervention with the Division within fifteen days following publication of this notice. If such a protest or notice of intervention is received, a hearing will be scheduled before the Board of Oil, Gas and Mining. Protestants and/or intervenors should be prepared to demonstrate at the hearing how this matter affects their interests.

DATED this 3rd day of February, 1994.

Date of Work Completion 01/28/1994

Report results of Multiple Completions and Recompletions to different reservoirs on WELL COMPLETION OR RECOMPLETION AND LOG form.  
\* Must be accompanied by a cement verification report.

**13. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)**

PG&E Resources Company has plugged off the Spring Canyon and Blackhawk formations and recompleted the Shimmin Trust 10-11 in the Price River formation as shown on the attached daily report. Also attached is a copy of the required Step Rate Test for the Price River. As shown on the daily report, the annulus was tested to 1000 psi for 30 minutes on 01/28/94. First injection into the Price River upon final completion was 1/28/94.

RE: Application for Water Disposal Well  
Shimmin Trust 10-11  
Castlegate CBM Project  
Carbon County, Utah

Dear Mr. Hunt:

PG&E Resources Company respectfully requests approval to utilize the referenced well for salt water disposal:

The enclosed application has been prepared in accordance with R615-5-2 and is being submitted for your review and approval. If you have any questions or need additional information, please contact the undersigned at (214) 706-7640 or Jim LaFevers at (214) 750-3988.

Sincerely,

Cindy R. Keister  
Sr. Regulatory Analyst

A. **OVERVIEW**

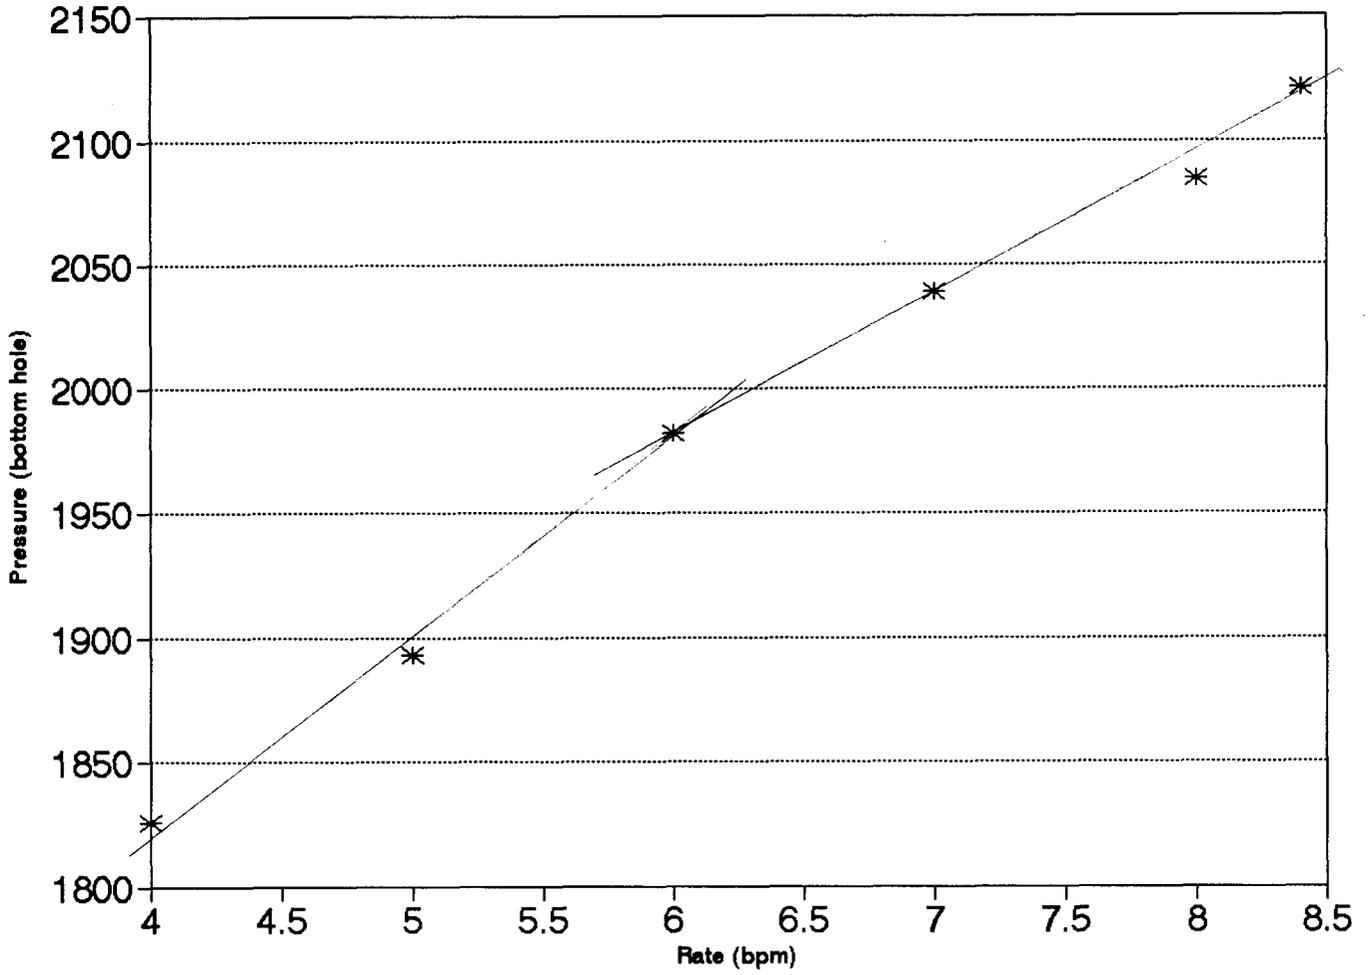

The purpose of the Castlegate CBM Project is to develop and exploit the Coal Bed Methane associated with the Blackhawk Coal in Carbon County, Utah. The Methane will be produced through twenty five (25) wells which have been drilled and completed. Exploitation of the Methane from the Blackhawk Coal requires that the coal be dewatered. As the water is removed from the coal, the Methane will begin to disassociate and will be produced. PG&E Resources intends to inject the produced water into the Price River Sand. This would be accomplished by plugging off the Spring Canyon Sand and the Blackhawk perforations and perforating the Price River Sand.

**SHIMMIN TRUST No. 10-11  
NE, NW, Sec. 11, T12S, R10E  
CASTLEGATE FIELD  
Carbon Co., Utah  
AFE No. 92-1238**

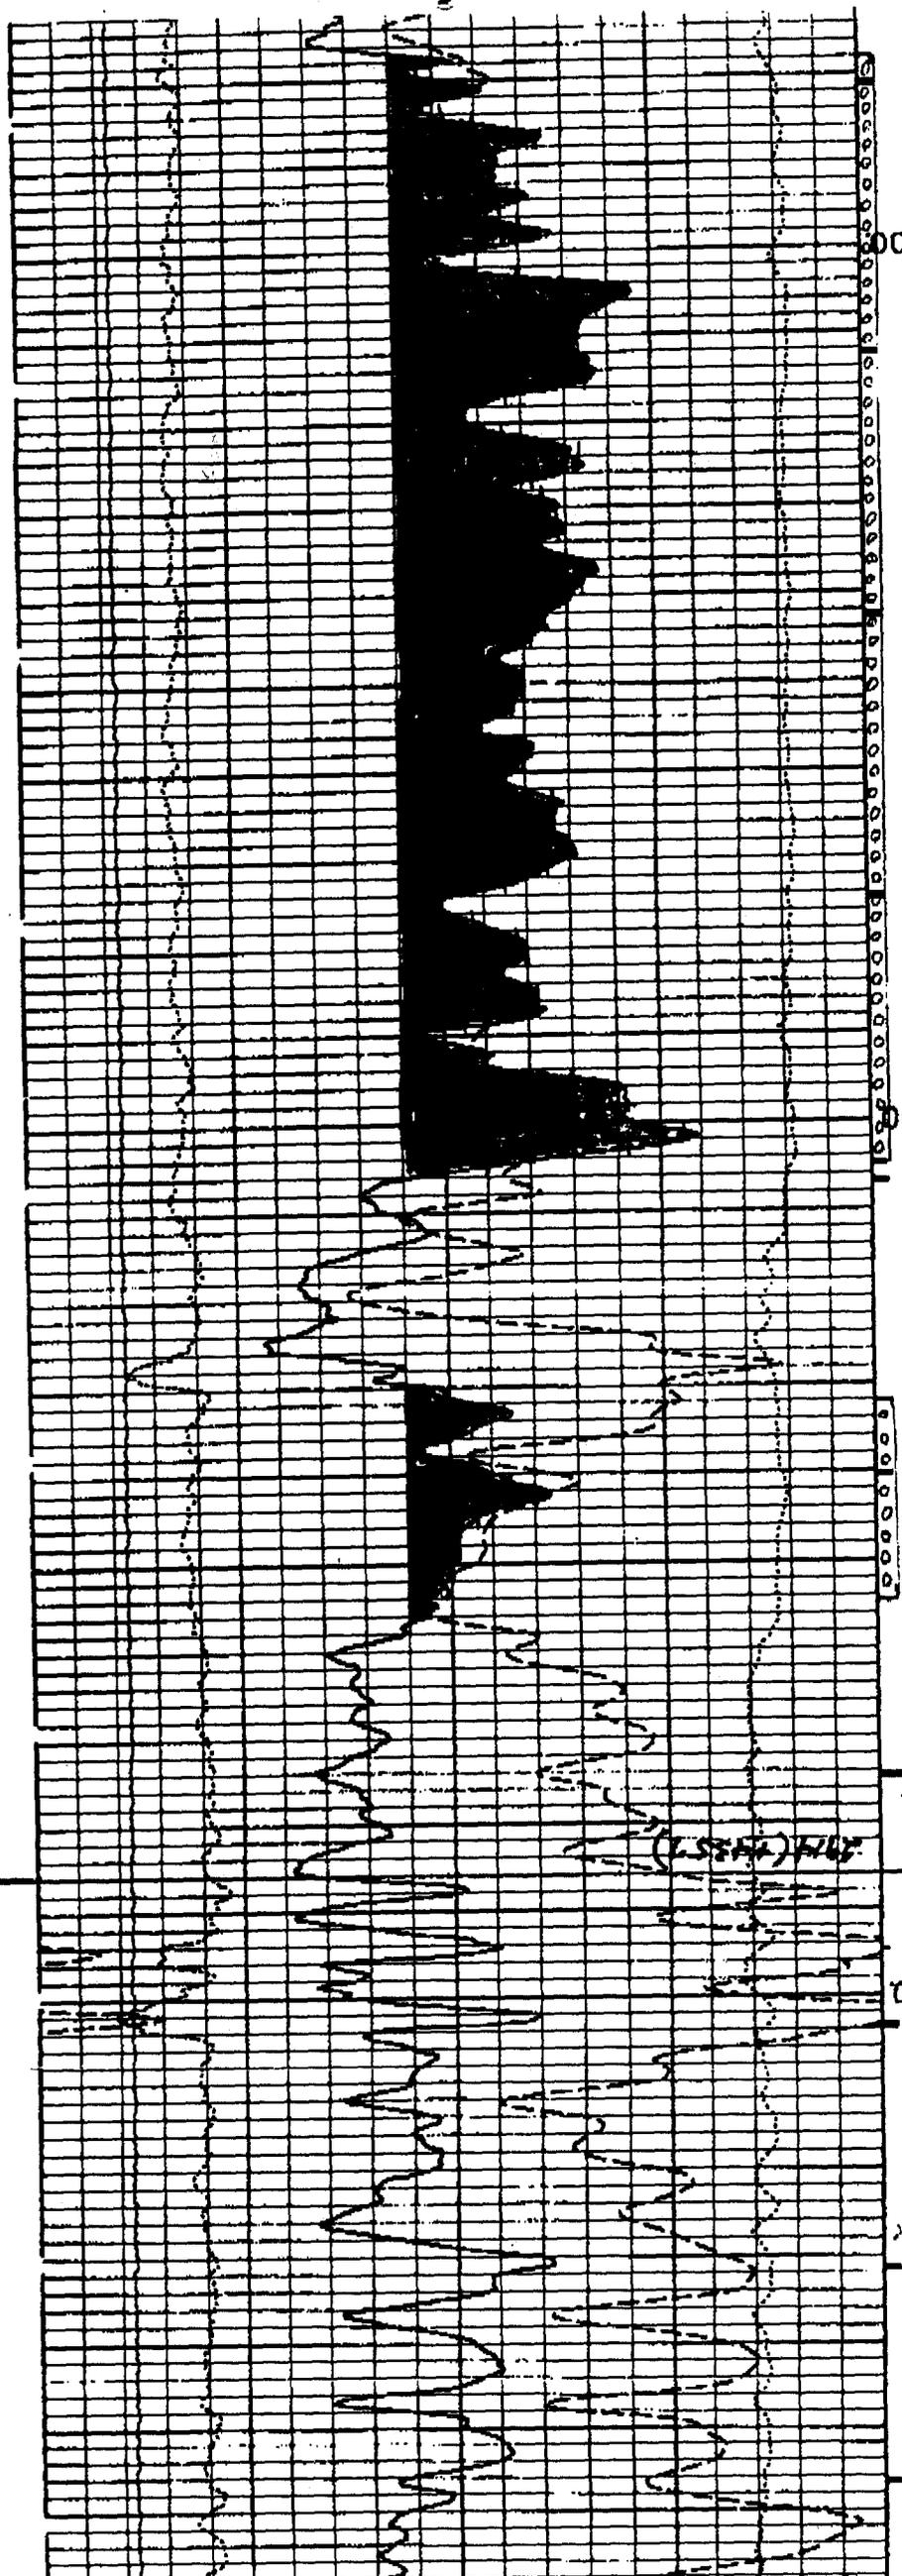

**STEP RATE TEST DETAIL**

**PROCEDURE:**

1. POOH. RIH w/ 2 7/8" "XN" nipple, packer, two joints of tubing, "X" nipple, and tubing. Set packer at 2900' +/- . Hang pressure bombs in "XN" nipple. Run "PN" plug body and set in "N" nipple.
2. Perform step rate test with filtered produced water per the following schedule:

<u>STEP</u>	<u>DURATION (HR)</u>	<u>RATE (bpm)</u>	<u>VOLUME (BBL)</u>
1	1	0.25	15
2	1	0.5	30
3	1	1.0	60
4	1	2.0	120
5	1	3.0	180
6	1	4.0	240
7	1	5.0	300
8	3	5.5	990
	<u>10</u>		<u>1935</u>

3. On final rate, RIH with prong for "PN" plug; shut well in with plug for 48 hour falloff test. Pressure up on top of the plug to 1000 psi over final injection pressure. Monitor tubing pressure for 48 hrs.
4. Pull bombs; evaluate data and report results to DOGM.

## WELL HISTORY

### 10-11 Shimmin Trust

Castlegate Area  
Carbon County, Utah  
(PG&ER Operated)

- 01-10-94 RU rig, RD drive head, well flowing 130 BPH. LD 1" rods, final flow rate 110 BPH. Hook up 2-1/16" inj line to ann & flowing both to plant overnight.
- 01-11-94 100 psi SIP, bled off gas, well dead. Ran 1.5" GR to Otis Perma Latch pkr at 4652', TOH, ran in with 1.5" Otis 'PN' plug & set at 4652'. Test plug to 1500 psi (ok). No flow on 2-1/16", 2-7/8" tbg flowing gas & wtr, slight vac on csg. Pump 20 bbl wtr down csg to displace gas in 2-7/8" tbg, 2-1/16" started to flow. Pump 10 bbl wtr down 2-1/16" tbg at 2 BPM with 500 psi, no surf returns. TIH with prong over shot, rec'd loose prong (pin sheared). Fish plug & redress same. Re-run plug, test to 1500 psi (ok), no flow back.
- 01-12-94 Thaw out wellhead, check PN plug in 2-1/16" string - no flow back. Displace well down 2-7/8" tbg with 150 bbl produced wtr, still flowing at 50 BPH with 100 psi SIP. 2-1/16" tbg started to flow 5 min after pumping down 2-7/8" tbg. Press up on 2-1/16" to 1000 psi (ok), bleed off press & flow back at 24 BPH. WO WL.
- 01-13-94 2-1/16" tbg, 150 psi, 2-7/8" & csg 100 psi - SIP. TIH, recovered equalizer prong - took 150# to come loose, recovered "N" plug, re-dressed "PN" plug & set in Perma-Latch pkr at 4652'. Pressure test to 1000 psi - held OK, bled off, no flow back. Displaced hole down 2-7/8" tbg w/130 bbls brine wtr, 10 #/gal. Well dead. NU BOP, Un-J short string & LD same, SDFN.
- 01-14-94 Un J at 2-1/16" overshot, LD 2-1/16" tbg. PU & tally 149 jts 2-7/8" workstring & SDFN.
- 01-15-94 Spot 1 sack sand on pkr at 4652' & TOH with work string. PU Miller cup type RBP, TIH & set at 3215' KB. Press test csg & RBP to 1000 psi (ok). Spot 1 sack sand on RBP, displace hole with produced wtr. Swab well down to 2000', POOH. RU to perf & SDFN.

# Resistivity-Salinity-Temperature Conversions of NaCl Solutions

## WELL HISTORY

**10-11 Shimmin Trust**  
Castlegate Area  
Carbon County, Utah  
(PG&ER Operated)

- 01-16-94 Perf Price River Sand 2945-68' & 2995-3122' using a 4" csg gun, 180° phase, .45" diam hole, 22.7 gram charge with 2 SPF. IFL 1890', initial entry rate estimated at 839 BPD, start swab with FL at 450' KB. TIH with pkr, set at 2898', test to 1000 psi (ok). Swab, FL at 450', rec'd 190 bbl, final rate 60 BPH. Sample preliminary TDS 29,484 ppm. SDFN.
- 01-17-94 Prep rods for storage. Step rate test scheduled for 1-20.
- 01-18-94 Unseat pkr, TOH & TIH. Set bottom of "FB" pkr at 2890' with 26,000 lbs tension, XN nip at 2883' & X nip at 2819'. Press test ann to 1000 psi for 30 min, ok. Estab inj rate in Price River Sand at 3 BPM with 300 psi for 20 bbl of filtered produced wtr with rig pump. Fill frac tanks with filtered produced wtr & SDFN.
- 01-19-94 WO Halliburton to run step rate test. Rig shut down for day.
- 01-20-94 Run press bombs in XN nip at 2883', run PX plug body in X nip at 2819'. Press up ann to 400 psi, test lines to 4000 psi (ok), run step rate test with filtered produced wtr. Final rate: 5.5 BPM (7920 BPD), 1620 psi. SI for fall-off test. Note: Water sample confirmation by Ford Labs indicated TDS at 26,640 MPL.
- 01-21-94 Well on Step Rate Fall-Off test, 2300 psi SITP, 100 psi SICP.
- 01-22-94 Well on Step Rate Fall-Off test, 1250 psi SITP, 375 psi SICP.
- 01-23-94 500 psi SITP, 375 psi SICP. Recover PX plug & press bombs. SDFN.
- 01-24-94 TOH with pkr, TIH & recover RBP. TIH, circ 45' to top pkr, circ BU. Latch on pkr at 4652', could not pull pkr loose, tbg came free. TOH with 20 stands & SDFN.

Country: USA	
Formation Tested: UNKNOWN	
Hole Temp: 120.00 F	
Total Depth: ft	
Net Pay: 150.00 ft	
Gross Tested Interval:	ft
Perforated Interval (ft):	

RECOVERY:

CALCULATED PARAMETERS FOR LIQUID WELL USING SEMI-LOG ANALYSIS:

Gauge No: 2743	Gauge Depth: 3000.00 ft	Period No.: 10	Period Type: FO
X-axis Function.....		Xj	
Y-axis Function.....		Pressure	
Production Rate (bbl/D).....		-4320.0	
Pressure Intercept (psi).....		1107.54	
Flow Capacity (md-ft).....		3232.59	
Permeability (md).....		21.55	
Skin Factor.....		-2.135	
Delta P due to Skin.....		-223.770	
Damage Ratio.....		0.731	
Flow Efficiency.....		1.368	
Radius of Investigation (ft).....		151.64	
at Transient Time (hr).....		0.95	

REMARKS: FRIABLE SANDSTONE.

THE STEP-RATE TEST DID NOT CONCLUSIVELY DEFINE THE PARTING PRESSURE OF THE INJECTED FORMATION. THE LARGE PERFORATED INTERVAL MOST LIKELY RESULTED IN A COMBINATION OF INDUCED FRACTURE FLOW AND RADIAL MATRIX FLOW. THE SUPERPOSITION OF THE TWO TYPES OF FLOW REGIME TEND TO CONFUSE THE INTERPRETATION OF THE STEP-RATE PLOT. A BEST FIT OF THE STEP RATE PLOT WOULD YIELD A RATE OF 3.0 BPM AT 1730 PSI.

TEST PERIOD SUMMARY

RESERVOIR PARAMETERS  
USING SEMI-LOG METHOD FOR LIQUID WELLS

Oil Gravity: .....	API @ 60 F
Gas Gravity: .....	SG
Gas/Oil Ratio: .....	ScF/STB
Well Bore Radius: .....	0.3333 ft
Net Pay: .....	150.00 ft
Porosity: .....	15.00 %
Water Salinity: .....	0.00 % SALT
Fluid Properties Reference: .....	2000.0 psi
Formation Temperature: .....	120.00 F
Viscosity: .....	0.549 cp
Formation Volume Factor: .....	1.011 Rvol/Svol
Total System Compressibility: .....	7.125 x 10 <sup>-6</sup> vol/vol/psi
Bubble Point: .....	psi

Gauge number:	2743
Gauge Depth (ft):	3000.00
Test Period:	10
Period Type:	Fall-off
X-axis Function:	Xj
Y-axis Function:	Pressure
Period Start Press. (psi):	1715.94
Y Intercept (#1 Units):	1107.541
Pressure Intercept (psi):	1107.541
Slope (#2 Units):	120.671
Sy (#1 Units):	1.132

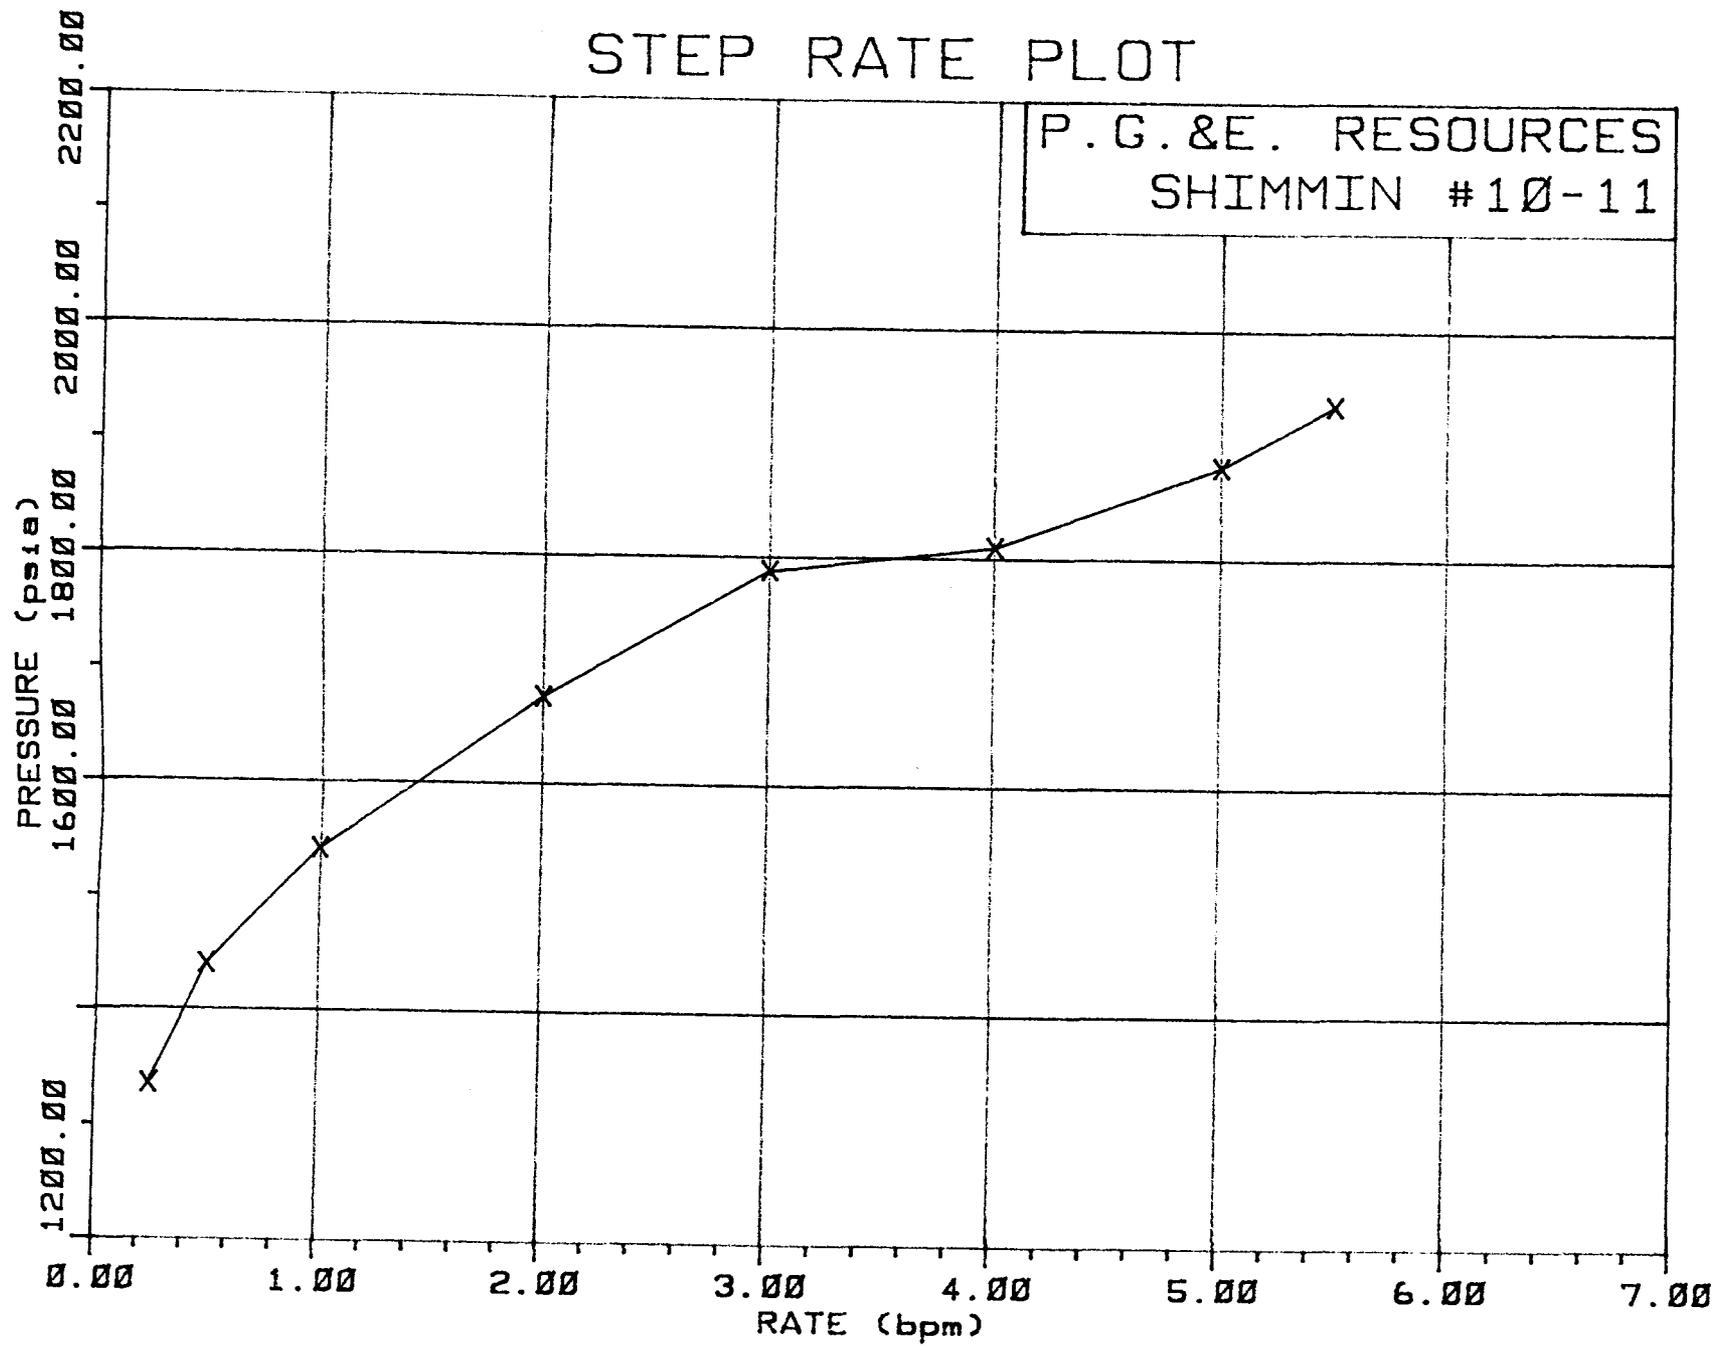

Production Rate (bbl/D):	-4320.0
Flow Capacity (md-ft):	3232.59
Permeability (md):	21.55
Skin Factor:	-2.135
Delta P due to Skin (psi):	-223.770
Damage Ratio:	0.731
Flow Efficiency:	1.368
Theoretical Rate (bbl/D):	
Rad. of Investigation (ft):	151.64
at Transient Time ( hr):	0.95

Note: #1 Units = psi for Pressure Y-axis function.  
 #1 Units = psi/bbl/D for dp/dq Y-axis function.  
 #2 Units = psi/cy for Pressure Y-axis function.  
 #2 Units = psi/cy/bbl/D for dp/dq Y-axis function.

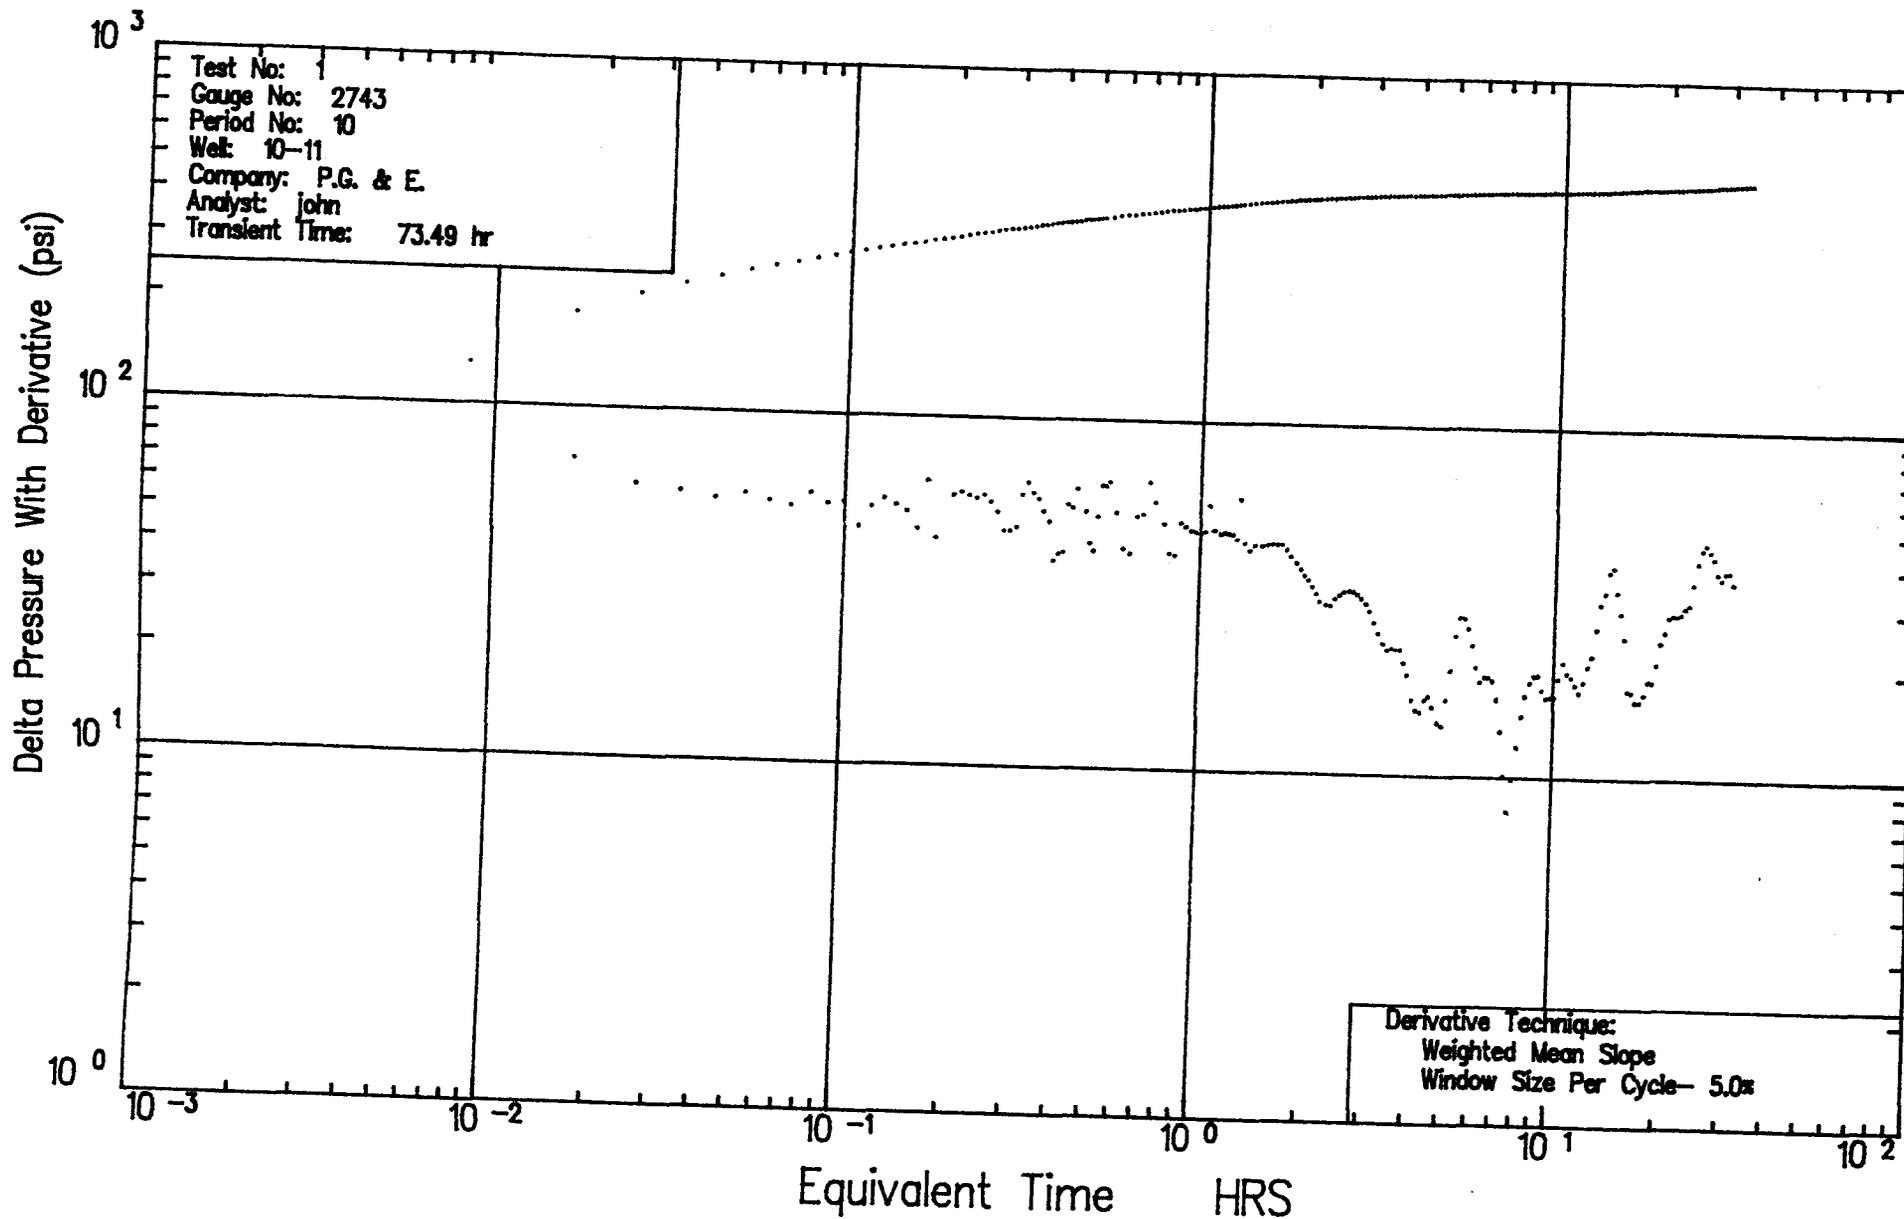

REMARKS: THE STEP-RATE TEST DID NOT CONCLUSIVELY DEFINE THE PARTING PRESSURE OF THE INJECTED FORMATION. THE LARGE PEFORATED INTERVAL MOST LIKELY RESULTED IN A COMBINATION OF INDUCED FRACTURE FLOW AND RADIAL MATRIX FLOW. THE SUPERPOSITION OF THE TWO TYPES OF FLOW REGIME TEND TO CONFUSE THE INTERPRETATION OF THE STEP-RATE PLOT. A BEST FIT OF THE STEP RATE PLOT WOULD YIELD A RATE OF 3.0 BPM AT 1730 PSI.

## INSTRUCTIONS

This form should be completed in compliance with the Utah Oil and Gas Conservation General Rules. If not filed prior to this time, all logs, tests, and directional surveys as required by Utah Rules should be attached and submitted with this report.

ITEM 18: Indicate which elevation is used as reference for depth measurements given in other spaces on this form and on any attachments.

ITEMS 22 and 24: If this well is completed for separate production from more than one interval zone (multiple completion), so state in item 22, and in item 24 show the producing interval, or intervals, top(s), bottom(s) and name(s) for only the interval reported in item 33. Submit a separate report (page) on this form, adequately identified, for each additional interval to be separately produced, showing the additional data pertinent to such interval.

ITEM 29: "Sacks Cement": Attached supplemental records for this well should show the details of any multiple stage cementing and the location of the cementing tool.

ITEM 33: Submit a separate completion report on this form for each interval to be separately produced (see instruction for items 22 and 24 above).

37. SUMMARY OF POROUS ZONES: Show all important zones of porosity and contents thereof; cored intervals; and all drill-stem, tests, including depth interval tested, cushion used, time tool open, flowing and shut-in pressures, and recoveries.		38. GEOLOGIC MARKERS

Re: Shimmin Trust 10-11 Well, Section 11, Township 12 South, Range 10 East,  
Carbon County, Utah

Gentlemen:

Pursuant to Utah Admin. Code R649-5-3-3, the Division of Oil, Gas and Mining (the "Division") issues its administrative approval for conversion of the referenced well to a Class II injection well. Accordingly, the following stipulations shall apply for full compliance with this approval:

1. Compliance with all applicable requirements for the operation, maintenance and reporting for Underground Injection Control ("UIC") Class II injection wells pursuant to Utah Admin. Code R649-1 et seq.
2. Conformance with all conditions and requirements of the complete application submitted by PG & E Resources Company.
3. Submittal of water quality data representative of the overlying formations.
4. Conduct additional step-rate testing to determine fracture gradient information.

Page 2  
PG & E Resources Company  
March 2, 1994

Following completion of the well conversion work, pressure testing and other operations and submittal of the required documents to the Division, a final UIC permit will be issued. If you have any questions regarding this approval or the necessary requirements, please contact Dan Jarvis at this office.

Sincerely,

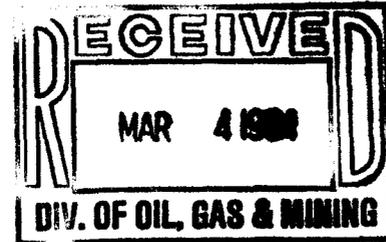

A handwritten signature in black ink, appearing to read 'R.J. Firth', with a checkmark at the end.

R.J. Firth  
Associate Director

RE: Application for Water Disposal Well  
Shimmin Trust 10-11  
Castlegate CBM Project  
Carbon County, Utah

Dear Mr. Jarvis:

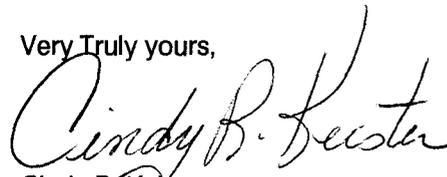

Per your request, the following information is supplied for the referenced water disposal application.

Springs in the project area were identified by Waddell et al (1981). The springs are located in the NENE Section 20, T12S, R11E and the NENW and SWNE of Section 21, T12S, R11E, Carbon County, Utah. The total dissolved solids were 420 and 386 respectively. Attached is a water analysis for a spring recently located in the SWNE of Section 11, T12S, R11E, Carbon County, Utah.

There were two (2) water wells identified in the project area. PG&E drilled a water well in the NESW of Section 11, T12S, R11E, Carbon County, Utah. The well was drilled to a total depth of 365'. The second water well in the area is located in the SESW Section 12, T12S, R11E, Carbon County, Utah. This well was drilled to approximately 80'. Also attached are water analysis for the water wells.

Other springs and water wells that exist in Carbon and Emma Counties were researched by Mark Page with Utah Water Rights Division but no other sources of ground water were found in the immediate project area.

Very Truly yours,

  
Cindy R. Keister  
Sr. Regulatory Analyst

 3 Triad Center, Suite 350  
 Salt Lake City, Utah 84180-1203

Dear Dan:

As you have requested, the following log calculations are submitted using the PG&E Resources #10-11 Shimmin Trust well located in Section 11-T12S-R10E, NE-NW, Carbon County, Utah.

Using Archie's Equation of  $S_w = \sqrt{\frac{F \cdot R_w}{R_T}}$ , where  $S_w$  = water saturation,  $F = \frac{1}{\phi^2}$ ,  $R_w$  = resistivity of the formation water which equals  $\frac{\phi^m \cdot R_T}{a}$  with the assumption that  $S_w = 100\%$ ,  $R_T$  = the measured resistivity from the open hole logs using the deep induction curve,  $\phi$  = the measured density porosity from the open hole log,  $m$  = cementation exponent which = 2, and  $a$  = the lithology constant of 1.

Perforations in the Price River sandstone are from 2945' - 2968' and 2995' - 3122'. After selecting several points in these intervals to calculate the  $R_w$ , the Halliburton log charts, Gen-2b and Gen-5 can be used to estimate the Total Sodium Chloride concentration. Bottom hole temperature in the Shimmin Trust #10-11 is 118°F at 4992'.

Depth	$\phi$	$R_T$	F	$R_w$	$S_w$	Temp	NaCl Concentration
2952'-2954'	.10	55	100.00	.55	100	90°F	9000ppm
2966'-2968'	.13	45	59.17	.76	100	90°F	6100ppm
3030'-3032'	.16	55	39.06	1.41	100	90°F	3500ppm
3062'-3064'	.17	70	34.60	2.02	100	90°F	2300ppm
3094'-3096'	.19	55	27.70	1.99	100	90°F	2300ppm

Mr. Dan Jarvis  
March 2, 1994

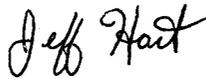

From the low values of NaCl concentrations it can be determined that the log calculations are much lower and possibly erroneous when compared to the actual sample of produced water measured in the lab. (see attached report).

When asked to run through similar calculations for potential water bearing sands in the shallower North Horn formation, the following results were found.

<u>Depth</u>	<u><math>\phi</math></u>	<u>RT</u>	<u>F</u>	<u>R<sub>wa</sub></u>	<u>S<sub>w</sub></u>	<u>Temp</u>	<u>NaCl Concentration</u>
1140'-1142'	.14	120	51.02	2.35	100	65°F	2700ppm
1848'-1850'	.18	45	30.86	1.46	100	74°F	4100ppm
1950'-1952'	.13	82	59.17	1.39	100	76°F	4200ppm
2070'-2072'	.14	60	51.02	1.18	100	77°F	5100ppm

Results from these calculations show lower NaCl concentrations as is expected due to the shallower depths. However, the results are questionable as was the case with the Price River sandstone calculations and should be used only for comparison. The actual values should come from an obtained sample in the formation and be analyzed in the lab.

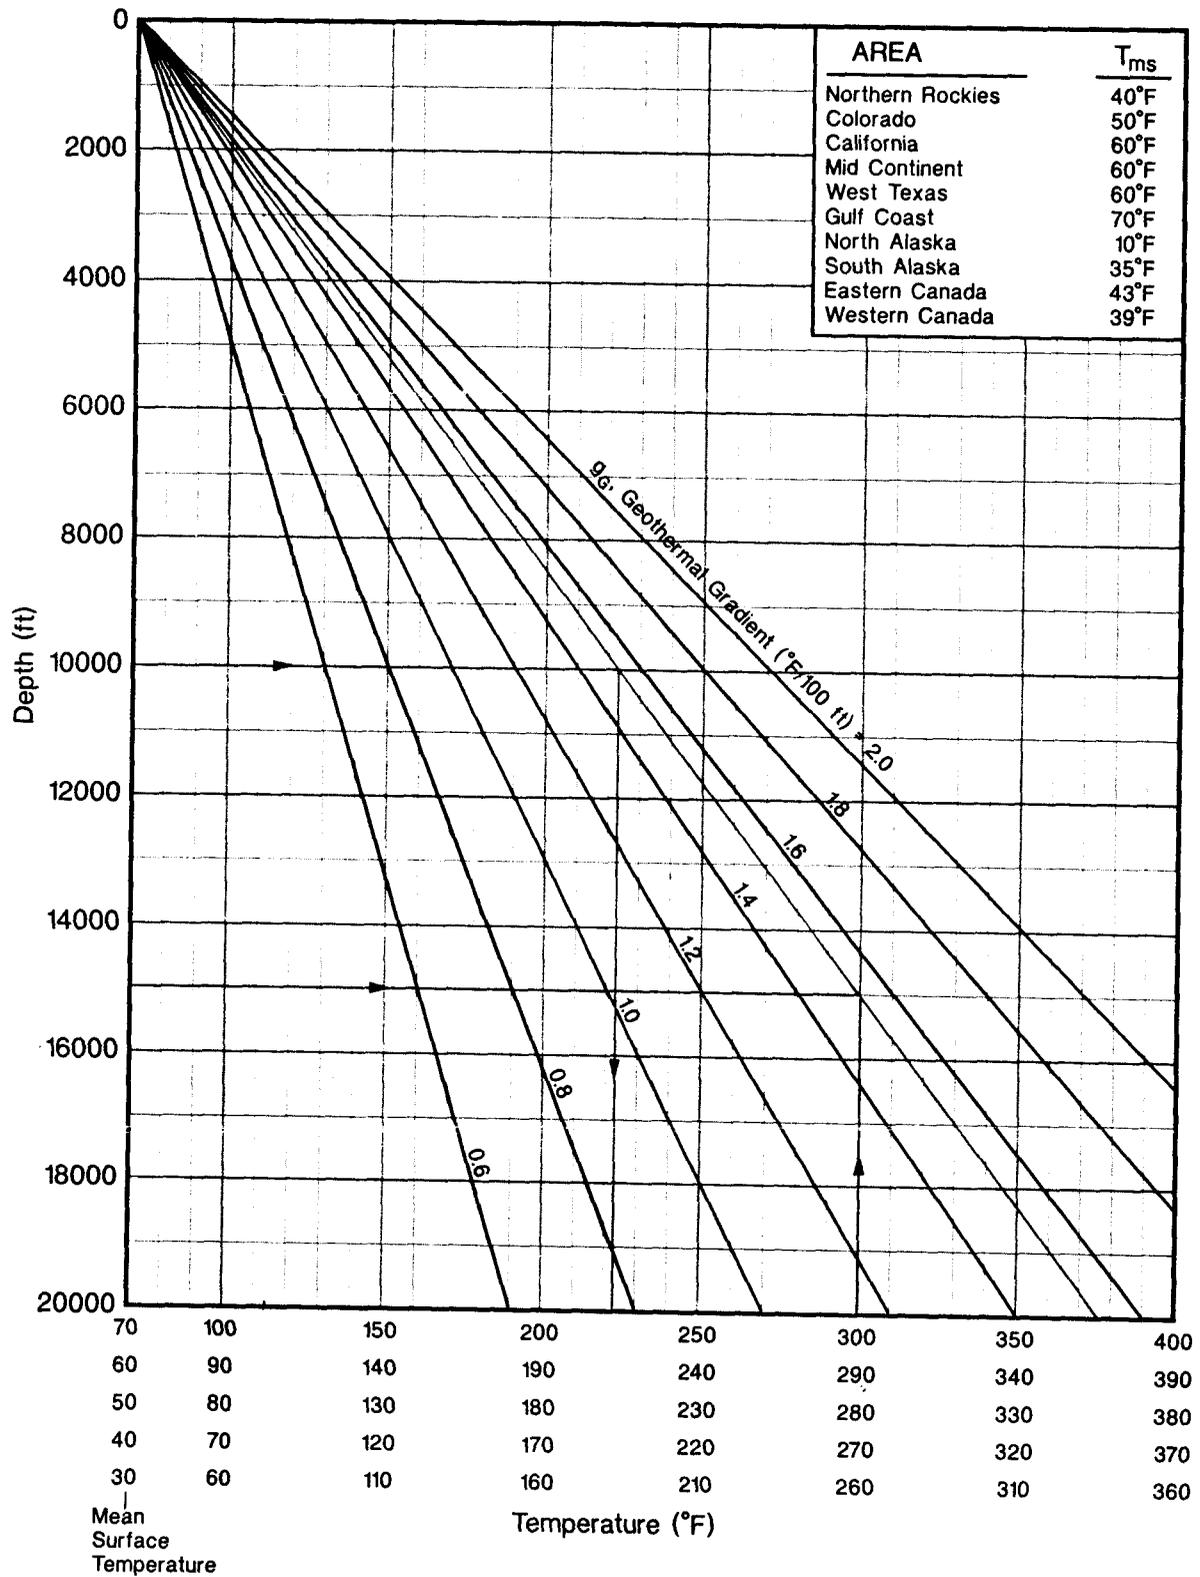

Very truly yours,

Jeff Hart

**DIVISION OF OIL, GAS AND MINING  
UNDERGROUND INJECTION CONTROL PROGRAM**

**PERMIT  
DECISION DOCUMENT**

**Applicant:** PGE Resources Co.      **Well:** Shimmin Trust 11-10

**Location:** Sec. 11, T.12 S., R.10 E., Carbon County

**Ownership Issues:**

The proposed well is located in section 11, township 12 south, range 10 east, Carbon County, Utah. The surface location is owned by the Shimmin Trust Estate. Minerals are also owned by the Shimmin Estate. PGE Resources is the operator of all leases in the 1/2 mile radius. An affidavit has been filed stating that all surface and mineral owners in the 1/2 mile radius have been noticed.

**Well Integrity:**

The well proposed for injection is the Shimmin Trust 11-10. This well has a 9 5/8" surface casing set at 515 feet and is cemented to surface. A 7" production casing was set from surface to 4990 feet and cemented in two stages to surface and verified by cement bond log. The new zone of injection lies within the Price River Formation at a depth of 2945-3122 feet. A 2 7/8" tubing will be set in a packer at 2900 feet. There are 2 producing wells and an existing injection well in the 1/2 mile area of review. All the wells in the area of review have sufficient casing and cement or proper plug placement to adequately protect any usdw's. A casing test should be performed at the time of conversion and a casing/tubing pressure test should be performed prior to injection.

**Ground Water Protection:**

Fresh water in the area of the project may occur in the Flagstaff and North Horn Formation. PGE Resources has been requested to submit information as to any water wells or springs in the area, additionally it was requested that log calculations be performed to estimate the quality of the water in the overlying North Horn.

**Oil Gas & Other Mineral Resources Protection:**

Injection into this well should have no adverse affects on any offsetting production. There are no other known mineral interests of concern. Coals located in the Mesa Verde are the source of the gas being extracted.

**Bonding:**

PGE has a statewide bond in the amount of \$80,000 dollars.

**Actions Taken and Further Approvals Needed:**

A public notice for the injection well was published in both the Salt Lake Tribune and the Carbon County newspaper. The permittee needs to run a second step rate test to verify a previously run test. Approval should be granted if no objections are received.

run need geologic + hydrologic information.

C. WELL LOGS

The following well logs were run on the subject well by Halliburton Logging Services, Inc. and have been previously submitted to the Division of Oil, Gas and Mining:

<u>Date Logged</u>	<u>Type of Log</u>
October 9, 1992	Spectral Density - Dual Spaced Neutron Log
October 9, 1992	Dual Induction Guard Log

D. CEMENT BOND LOG

An Acoustic Cement Bond Log will be run on the subject well in early 1993 and will be submitted to the Division of Oil, Gas and Mining at that time.

E. CASING PROGRAM

This well was drilled, casing was set and the well temporarily abandoned on October 11, 1992. The well will be dually completed in early 1993. Production will be from the Blackhawk formation through the upper 2-7/8" tubing and disposal of salt water will be into the Spring Canyon Sand through the lower 2-1/16" tubing (contingent upon receiving a disposal permit).

	<u>Surface Casing</u>	<u>Production Casing</u>	<u>DV Tool</u>
Hole Size	12-1/4"	8-3/4"	8-3/4"
Casing Size	9-5/8"	7"	7"
Weight (lbs/ft)	36	26 & 29	
Grade	J-55	N-80	
Setting Depth	476'	4,990'	3,290'
Amount of Cement	275 sacks	380 sacks	435 sacks
Type of Cement	Class G	50/50 Pozmix	Class G
Slurry Volume	327.25	501.6	1,435.3
Top of Cement	Surface	3,290'	Surface
Date Set	9-25-92	10-10-92	10-11-92
PBTD		4,902'	

F. CASING TEST PROGRAM

In lieu of a conventional Mechanical Integrity Test (MIT), a Radioactive Tracer Survey will be performed. The radioactive isotope will be injected down the 2-1/16" tubing to verify the path taken by the injection fluids. This will insure that the injection fluids cannot enter any strata other than the Spring Canyon Sand and also

insure integrity of the tubing and packer.

#### G. INJECTION FLUID

The injection fluid will consist of saltwater containing in excess of 6,500 mg/l TDS. The saltwater is a byproduct of gas production from the Blackhawk Coal formation. The proposed daily injection rates are: maximum - 6,500 barrels per day, average - 5,000 barrels per day.

#### H. INJECTION PRESSURES

The proposed injection pressures are: maximum - 2,000 psig, average - 1,500 psig.

#### I. REVIEW OF WELLS WITHIN 1/2 MILE RADIUS

Listed below is a review of the casing and cement programs for the four (4) offset well which are located within a one-half (1/2) mile radius of the Shimmin Trust # 10-11 well. All of these wells have been cased and cemented in a manner which will prevent migration of the injection fluids up or down the wellbore and will prevent entry of injection fluids into improper zones.

J. GEOLOGIC DATA

The proposed injection zone is the Spring Canyon sandstone, which occurs at a depth

of 4,473 to 4,869 feet. The Spring Canyon is a Cretaceous age sandstone of the Mesaverde Group that consists of fine to medium grained, sub-angular to sub-rounded marine sand, interbedded with siltstone and shale. Minor fractures are also believed to exist in the Spring Canyon. Sand thickness is 58 to 129 feet, based on a minimum density porosity cutoff of 8 percent. Confinement is provided by the Mancos shale below, and the interbedded sand, shale, and siltstone of the Aberdeen and Kenilworth formations above.

With the current well control, the lateral extent of the Spring Canyon includes the entire project area, (T12S-R10E). Although not every well was drilled to the Spring Canyon, the wells that did penetrate the sand showed a thickening to the east.

At this time, there appears to be no structural or stratigraphic limitations which would effect the conveyance and/or storage of the injected water.

**K. WELLBORE DIAGRAM**

The attached wellbore diagram indicates the configuration of the wellbore and downhole equipment once completion operations are finished in 1993.

**L. INJECTIVITY DATA**

Step Rate/Falloff Tests have been performed on the Jensen #9-10 and Shimmin Trust #2 wells. The results of these tests are attached.

**M. LABORATORY TESTS**

Laboratory analyses have been performed on the following water samples and copies are attached:

- Shimmin Trust #1 - Blackhawk produced water
- Shimmin Trust #2 - Blackhawk produced water
- Shimmin Trust #3 - Blackhawk produced water
- Shimmin Trust #4 - Blackhawk produced water
- Shimmin Trust #5 - Blackhawk produced water
- Jensen #9-10 - Blackhawk produced water (injection sample)
- Jensen #9-10 - Spring Canyon formation water (swab sample)

Oilab Petroleum Laboratory and Gas Engineering, the laboratory which performed these analyses, has indicated on the Jensen #9-10 reports that the Blackhawk and Spring Canyon waters are compatible.

N. **AFFIDAVIT OF NOTIFICATION**

To whom it may concern:

Copies of the UIC Form 1 application for the Shimmin Trust #10-11 well have been mailed to the following on January 29, 1993.

# SHIMMIN TRUST NO. 10-11

Castlegate Field  
Carbon County, Utah

Sec 11-T12S-R10E

**Jensen #9-10**  
**Steprate/Falloff Testing Results (Spring Canyon sand)**  
**Castlegate Field**  
**Carbon County, Utah**

The Jensen No. 9-10 was perforated in the Spring Canyon sand from 4705'-46' and 4753'-74' (CNL) at 2 spf for a steprate/falloff test. A general description of the results follows and copies of pertinent graphs are attached.

A swab sample was obtained from 4705'-74'. Comparison of the Spring Canyon water analysis from the swab sample to the analysis of the coal bed produced water sample which was used for injection tests indicated the TDS is slightly higher in the Spring Canyon, 10520 mg/l vs. 8250 mg/l. Chlorides in the Spring Canyon were measured at 2610 mg/l. The waters are very similar in composition and are compatible. A complete analysis of each sample is attached.

Results from the steprate/falloff test on the Spring Canyon sand indicated a closure pressure of 2299 psi. Horner evaluation of the falloff indicated permeability of 13.2 md, skin of -5.7, and a radius of investigation of 1541 feet. Average reservoir pressure was determined to be 1953 psi.. Closure pressure and average reservoir pressure were corrected to mid-perf. The final rate of the steprate test was 3.5 bbl/min or 5040 bbl/day with surface pressure of 815 psi. A total of 1512 bbls of water were injected into the Spring Canyon.

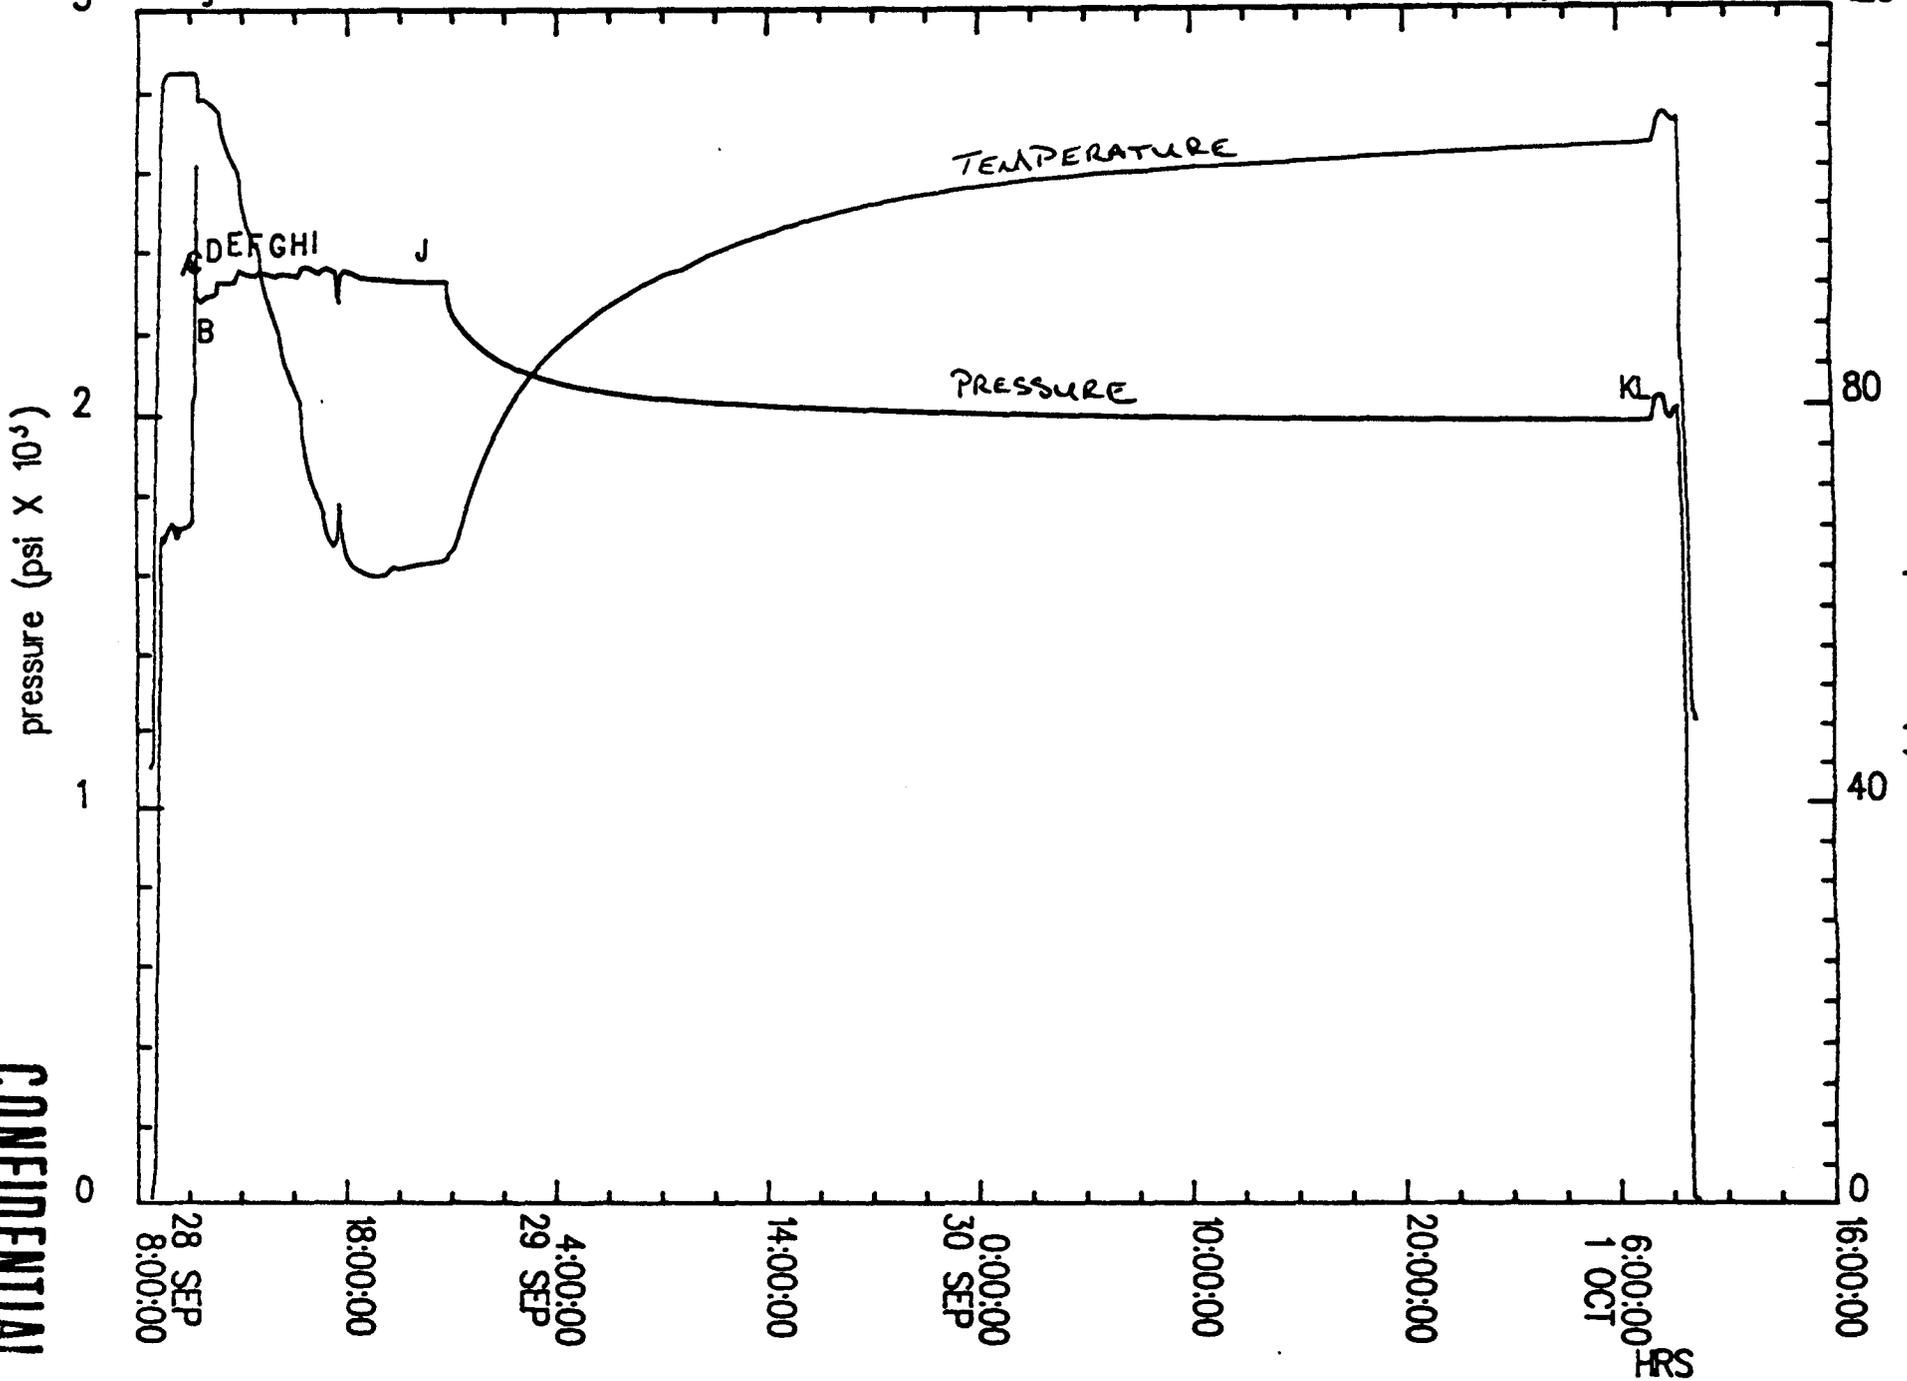

Comparison of the fracture gradients from the above closure pressures indicated that the Spring Canyon sand (0.51 psi/ft) will be bound by the shale above and below the zone which have fracture gradients (as determined from the Shimmin Trust No. 2 testing) of 0.63 psi/ft and 0.54 psi/ft, respectively.

Shimmin Trust No. 2  
Step-rate/Fallout Testing Results (Sand Canyon sand)  
Castlegate Field  
Carbon County, Utah

The Shimmin Trust No. 2 was perforated in the Spring Canyon sand from 4440' - 4528' (CNL) at 2 spf for a step-rate/fallout test. Shales above and below the Spring Canyon were also perforated at 4390' (2 holes) and 4575' (2 holes) to obtain stress tests. A general description of the results follows: copies of pertinent graphs are attached for your files.

A swab sample was obtained from 4440'-4528'. Comparison of the Spring Canyon water analysis from the swab sample to the analysis of the coal bed produced water sample which was used for the injection tests indicated the TDS is slightly higher in the Spring Canyon, 10206 mg/l vs. 8755 mg/l. Chlorides in the Spring Canyon were measured at 3208 mg/l. The waters are very similar in composition and are compatible. A complete analysis of each sample is attached.

Each of the shale intervals was isolated for a stress test. The zone at 4575' did not indicate a clearly defined fracture closure pressure. However, the best estimate from the third pump-in is 2460 psi. Evaluation of the closure pressure tests at 4390' indicated good repeatability with results of 2790 psi and 2780 psi (corrected to depth), a different of less than one percent.

Results from the step-rate/fallout test on the Spring Canyon sand indicated a closure pressure of 2005 psia. Horner evaluation of the falloff indicated permeability of 2.7 md, skin of -4.2, and a radius of investigation of 522 feet. Average reservoir pressure was determined to be 1280 psia. Closure pressure and average reservoir pressure were corrected to mid-perf. The final rate of the step-rate test was 3.5 bbl/min or 5040 bbl/day with surface pressure of 325 psi. A total of 908 bbls of water were injected into the Spring Canyon.

Comparison of the fracture gradients from the above closure pressures indicates that the Spring Canyon sand (0.45 psi/ft) will be bound by the shale above and below the zone which have a fracture gradients of 0.63 psi/ft and 0.54 psi/ft, respectively.

All of the data obtained indicates the Spring Canyon sand injection to be the most economic way of disposing of the produced water from the Castlegate project. Drilling has incorporated 7" casing in four wells to allow dual completion of the coals and injection interval.

RE: Change of Operator  
Castlegate Wells  
Carbon County, Utah

Dear Lisha:

Enclosed please find the following documents in connection with the above captioned transfer of operations to Anadarko Petroleum Corporation effective as of August 1, 1994.

- 1) Copies of 8 BLM Sundry Notices (Form 3160-5)
- 2) Originals of 21 Utah Sundry Notices (Form 9)
- 3) Originals of 4 Transfers of Authority to Inject (UIC Form 5)

If additional information is needed in this regard, please contact the undersigned or Mr. L. Steve Hamilton with Anadarko at (405) 475-7000.

Sincerely,

Rejahna Barrow  
Sr. Proration Analyst  
(214) 750-3120

Re: Notification of Sale or Transfer of Fee Lease Interest - Carbon County, Utah

Dear Ms. Barrow:

The division has received notification of a change of operator from PG & E Resources Company to Anadarko Petroleum Corporation for the following wells which are located on fee leases.

Jensen 7-15	Section 15, T.12S., R.10E	API No. 43-007-30165
Shimmin Trust 11-11	Section 11, T.12S., R.10E.	API No. 43-007-30166
Jensen 16-9	Section 9, T.12S., R.10E.	API No. 43-007-30163
Shimmin Trust 12-12	Section 12, T.12S., R.10E.	API No. 43-007-30168
Jensen 11-15	Section 15, T.12S., R.10E.	API No. 43-007-30175
Shimmin Trust 14-12	Section 12, T.12S., R.10E.	API No. 43-007-30169
Shimmin Trust 10-11	Section 11, T.12S., R.10E.	API No. 43-007-30167
Shimmin Trust 3	Section 14, T.12S., R.10E.	API No. 43-007-30119
Shimmin Trust 1	Section 11, T.12S., R.10E.	API No. 43-007-30120
Shimmin Trust 2	Section 14, T.12S., R.10E.	API No. 43-007-30121
Shimmin Trust 5	Section 14, T.12S., R.10E.	API No. 43-007-30122
Shimmin Trust 4	Section 11, T.12S., R.10E.	API No. 43-007-30123
Jensen 16-10	Section 10, T.12S., R.10E.	API No. 43-007-30161
Jensen 9-10	Section 10, T.12S., R.10E.	API No. 43-007-30159
Jensen 11-10	Section 10, T.12S., R.10E.	API No. 43-007-30164
Jensen 5-10	Section 10, T.12S., R.10E.	API No. 43-007-30162

Rule R.649-2-10 of the Utah Oil and Gas Conservation General Rules, requires that the owner of a lease provide notification to any person with an interest in such lease (working interest or royalty interest), when all or part of that interest in the lease is sold or transferred.

Page 2

Ms. Rejahna Barrow  
August 19, 1994

This letter is written to advise PG & E Resources Company of its responsibility to notify all individuals with an interest in these leases of the change of operator. Please provide written documentation of this notification to the division no later than September 9, 1994.

Sincerely,

Don Staley  
Administrative Manager  
Oil and Gas

**OPERATOR CHANGE DOCUMENTATION**

- Lee 1. (Rule R615-8-10) Sundry or other legal documentation has been received from former operator (Attach to this form). *(Rec'd 8-8-94)*
- Lee 2. (Rule R615-8-10) Sundry or other legal documentation has been received from new operator (Attach to this form). *(Rec'd 8-8-94)*
- N/A 3. The Department of Commerce has been contacted if the new operator above is not currently operating any wells in Utah. Is company registered with the state? (yes/no) \_\_\_\_\_ If yes, show company file number: \_\_\_\_\_.
- N/A 4. (For Indian and Federal Wells ONLY) The BLM has been contacted regarding this change (attach Telephone Documentation Form to this report). Make note of BLM status in comments section of this form. Management review of **Federal and Indian** well operator changes should take place prior to completion of steps 5 through 9 below.
- LWP 5. Changes have been entered in the Oil and Gas Information System (Wang/IBM) for each well listed above. *8-15-94*
- LWP 6. Cardex file has been updated for each well listed above. *8-12-94*
- LWP 7. Well file labels have been updated for each well listed above. *8-12-94*
- Lee 8. Changes have been included on the monthly "Operator, Address, and Account Changes" memo for distribution to State Lands and the Tax Commission. *(8-11-94)*
- Lee 9. A folder has been set up for the Operator Change file, and a copy of this page has been placed there for reference during routing and processing of the original documents.

ENTITY REVIEW

- Lee 1. (Rule R615-8-7) Entity assignments have been reviewed for all wells listed above. Were entity changes made? (yes/no) no (If entity assignments were changed, attach copies of Form 6, Entity Action Form).
- N/A 2. State Lands and the Tax Commission have been notified through normal procedures of entity changes.

BOND VERIFICATION (Fee wells only)

- Lee 1. (Rule R615-3-1) The new operator of any fee lease well listed above has furnished a proper bond. Surety # 224351 / #80,000 "Seaboard Surety Company"
2. A copy of this form has been placed in the new and former operators' bond files.
- Lee 3. The former operator has requested a release of liability from their bond (yes/no) no. Today's date Aug. 8, 1994. If yes, division response was made by letter dated     19   .

LEASE INTEREST OWNER NOTIFICATION RESPONSIBILITY

- OTS 1. (Rule R615-2-10) The former operator/lessee of any fee lease well listed above has been notified by letter dated 8/19 1994, of their responsibility to notify any person with an interest in such lease of the change of operator. Documentation of such notification has been requested. by 9/8/94
- OTS 2. Copies of documents have been sent to State Lands for changes involving State leases. 8/18/94 to Ed Bonner

FILMING

1. All attachments to this form have been microfilmed. Date:     19   .

FILING

1. Copies of all attachments to this form have been filed in each well file.
2. The original of this form and the original attachments have been filed in the Operator Change file.

Report results of Multiple Completions and Recompletions to different reservoirs on WELL COMPLETION OR RECOMPLETION AND LOG form.

\* Must be accompanied by a cement verification report.

12. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Attached is a detailed analysis of the step rate test on 8/30/94. The original sundry was dated 10/4/94 and only included surface pressure. Since friction pressures were as high as 1500 psi, a BHP analysis should have been submitted. Figure 1 shows BHP vs rate. These points were selected in the field. Figures 2 and 3 show the actual gauge data (on 10 sec intervals) and the recorded rate data (on 1 min intervals) after time corrections were made and the data was put on the same scale. Note that the 4 and 5 BPM steps were only run for about 15 minutes while the 6, 7, 8, and 8.4 BPM steps were held for 30 minutes (recommended minimum time). Average injection rates were calculated and the final most stabilized pressure was picked and shown on Figure 4. Figure 5 shows the same points cross plotted with a best fit line indicating a PI of 21.7 BPD/PSI. The final average rate of 8.35 BPM and 2124.3 psi (2184 surface) indicates a minimum gradient of 0.7 psi/ft. Since the Price River formation is a fluvial system that is medium to fine grained, well consolidated with quartz overgrowths and silicious cement, this is reasonable. Figure 6 shows separate fits from 4-6 and 6-8.35. These fits are not believed to be correct due to the difference in injection times. The slope differences are also too small to indicate fracture creation; 19.2 vs 23.9 BPD/PSI. Finally, the fall off data on Figure 7 does not indicate an open fracture. Therefore, Anadarko requests that the current UIC permit maximums of 8000 BWPD and 1200 psi be increased accordingly.

**APPROVED BY THE STATE OF UTAH DIVISION OF OIL, GAS, AND MINING**  
DATE: 11-8-94  
BY: [Signature]

Utah Division of Oil, Gas and Mining

Attachment to Sundry Notice and Report on Wells  
dated October 31, 1994.

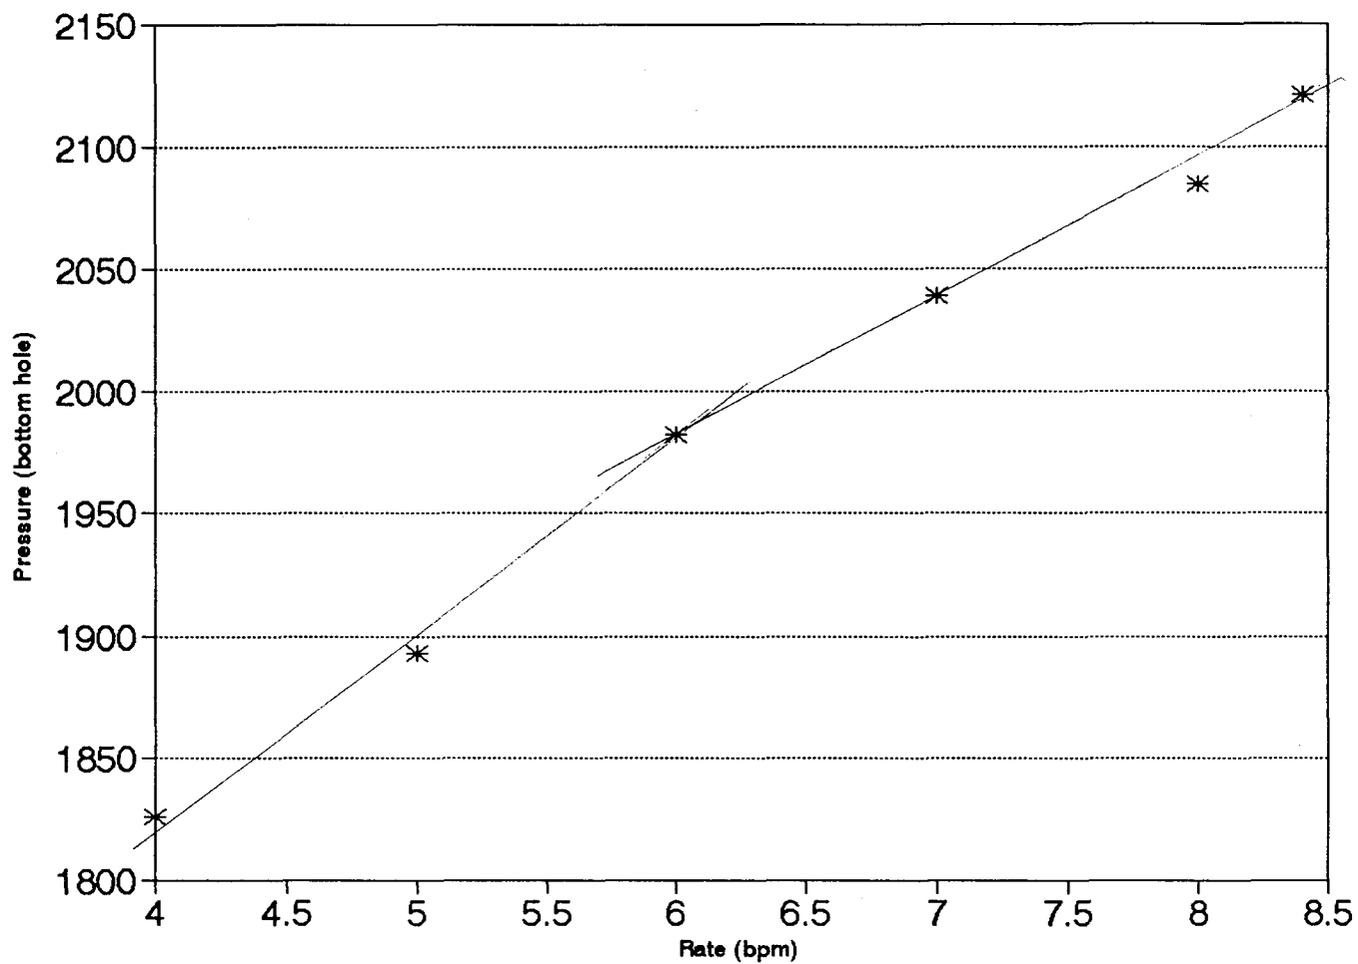

Subject: Request by Anadarko Petroleum Corp. for increase in  
maximum allowable injection pressure and rate.  
Shimmin Trust 10-11 well, sec. 11, T12S, R10E, Carbon,  
County.

API = 43-007-30167

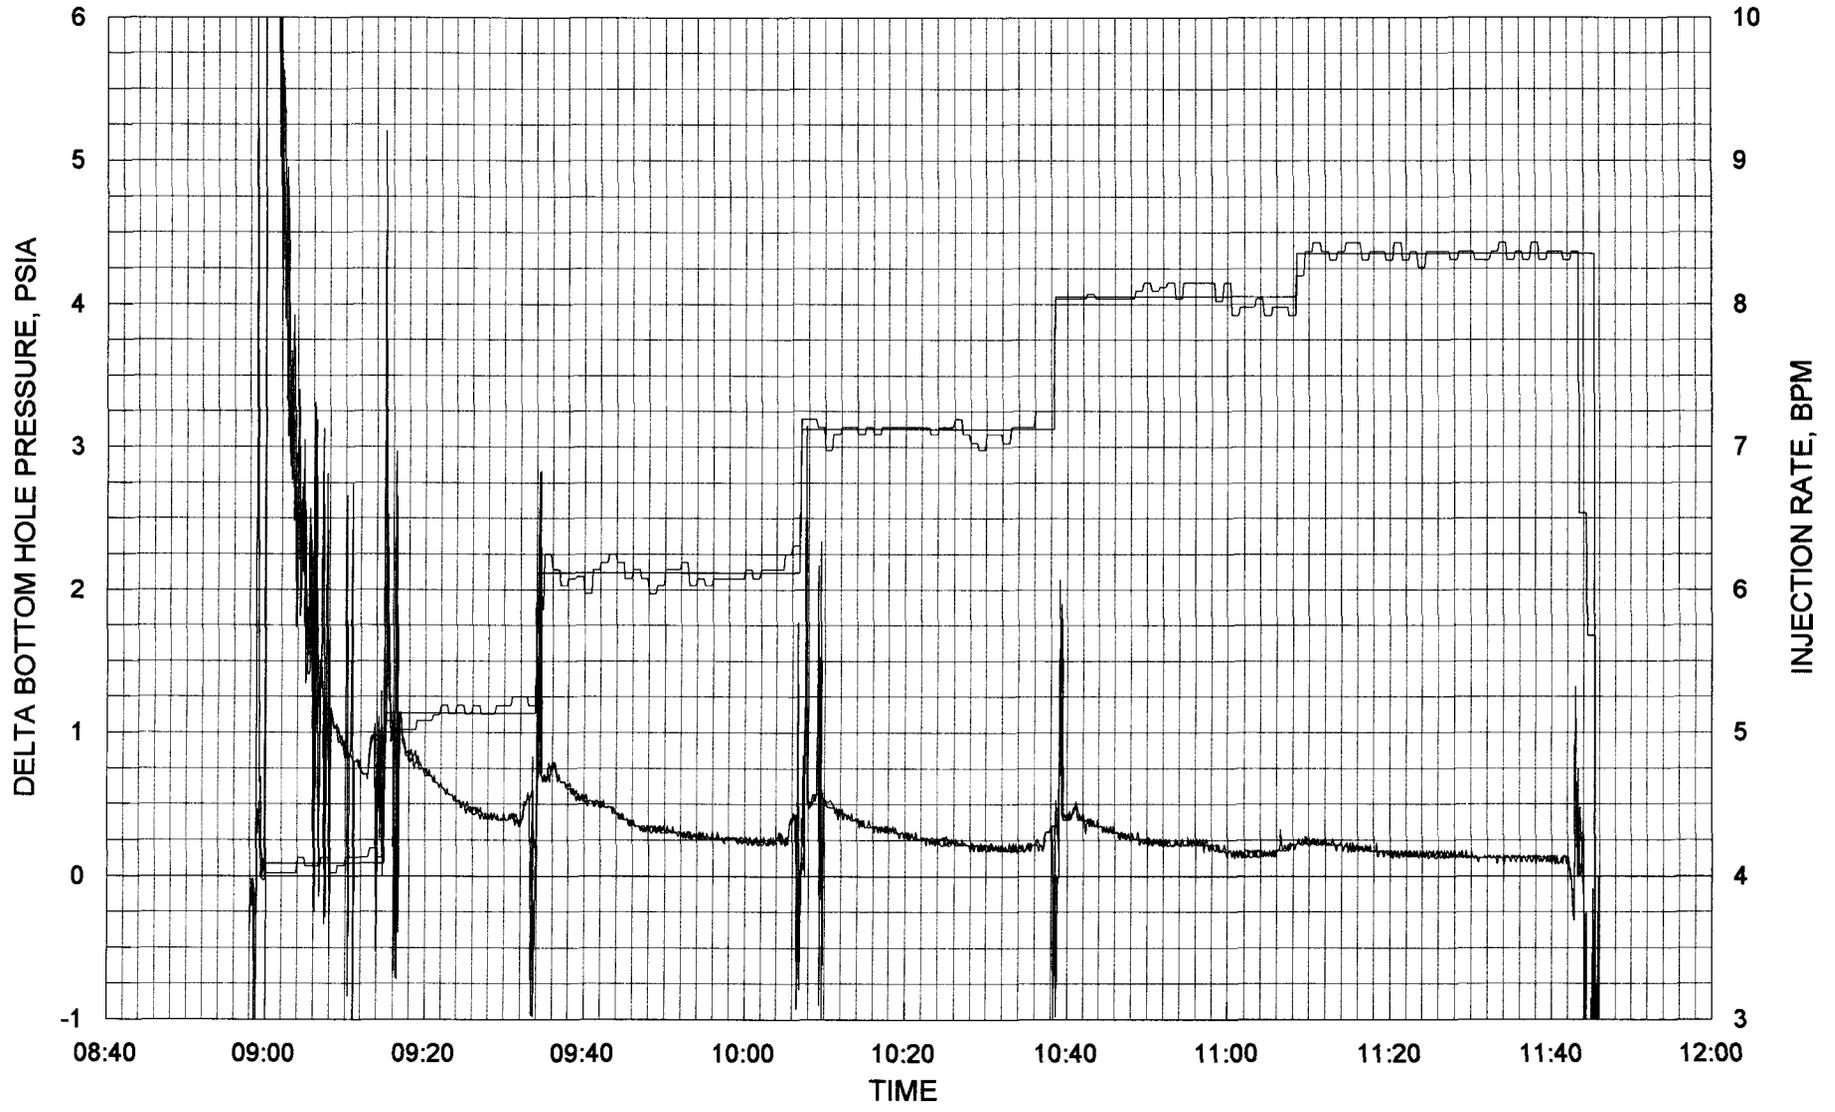

Conditions of Approval:

- A maximum surface injection pressure of 1450 psig at the well is approved. The maximum injection rate is not defined or limited, other than by the pressure limit at this time. Should any mechanical changes be made, such as changing tubing size, which alter the current surface to bottom hole pressure relationship, another step-rate test must be performed which will be designed to determine the formation parting pressure.

DESCRIBE PROPOSED PROGRAM: If proposal is to deepen, give data on present productive zone and proposed new productive zone. If proposal is to drill or deepen directionally, give pertinent data on subsurface locations and measured and true vertical depths. Give blowout preventer program, if any.

Well was originally drilled and completed by PG&E (API # 43-007-30167) and later P&A. Will re-enter and convert to eater disposal well. UIC application filed separately.

<u>1. Formation Name</u>	<u>Depth from GL</u>	<u>Depth from KB</u>	<u>Subsea Depth</u>
Flagstaff Ls	0'	12'	+7,250'
North Horn Fm	400'	412'	+6,850'
Price River Ss	2,902'	2,914'	+4,348'
Castlegate Ss	3,362'	3,378'	+3,888'
Black Hawk	3,680'	3,692'	+3,570'
Total Depth	4,127'	4,139'	+3,123'

(All depths are based on a graded ground level of 7,250')

2. NOTABLE ZONES

Sandstones are the goals. No oil or gas zones are expected. Flagstaff and North Horn are anticipated water zones.

3. PRESSURE CONTROL (Also see "5." on PAGE 2)

A ≈10" x 2,000 psi double ram BOP with 2,000 psi choke manifold will be used from bottom of surface casing to TD. (A typical 2,000 psi BOP is on Page 3. Actual model will not be known until the bid is let.) BOP system will be tested to 70% of the minimum internal yield before drilling the surface casing shoe. Tests will be recorded in the driller's log. BOPs will be inspected and operated daily to assure good mechanical working order.

4. CASING & CEMENTING

PAGE 2

Surface casing was circulated to surface with 275 sx Class G cement. Long string was cemented to surface with DV tool set at  $\approx 3,290'$ . PG&E used 380 sx 50-50 poz with additives + 385 sx Class G + 50 sx Class G.

#### 5. MISCELLANEOUS

Projected spud date is January 31, 2001. It will take  $\approx 2$  weeks to drill out the plugs and CIBP at 2895, clean out well to 4127', run CBL, squeeze cement behind pipe as necessary to isolate Price River from the Black Hawk, stimulate as necessary, and recomplete the well. Will perforate the following intervals:

2438' - 2556'

2942' - 2970'

2995' - 3122'

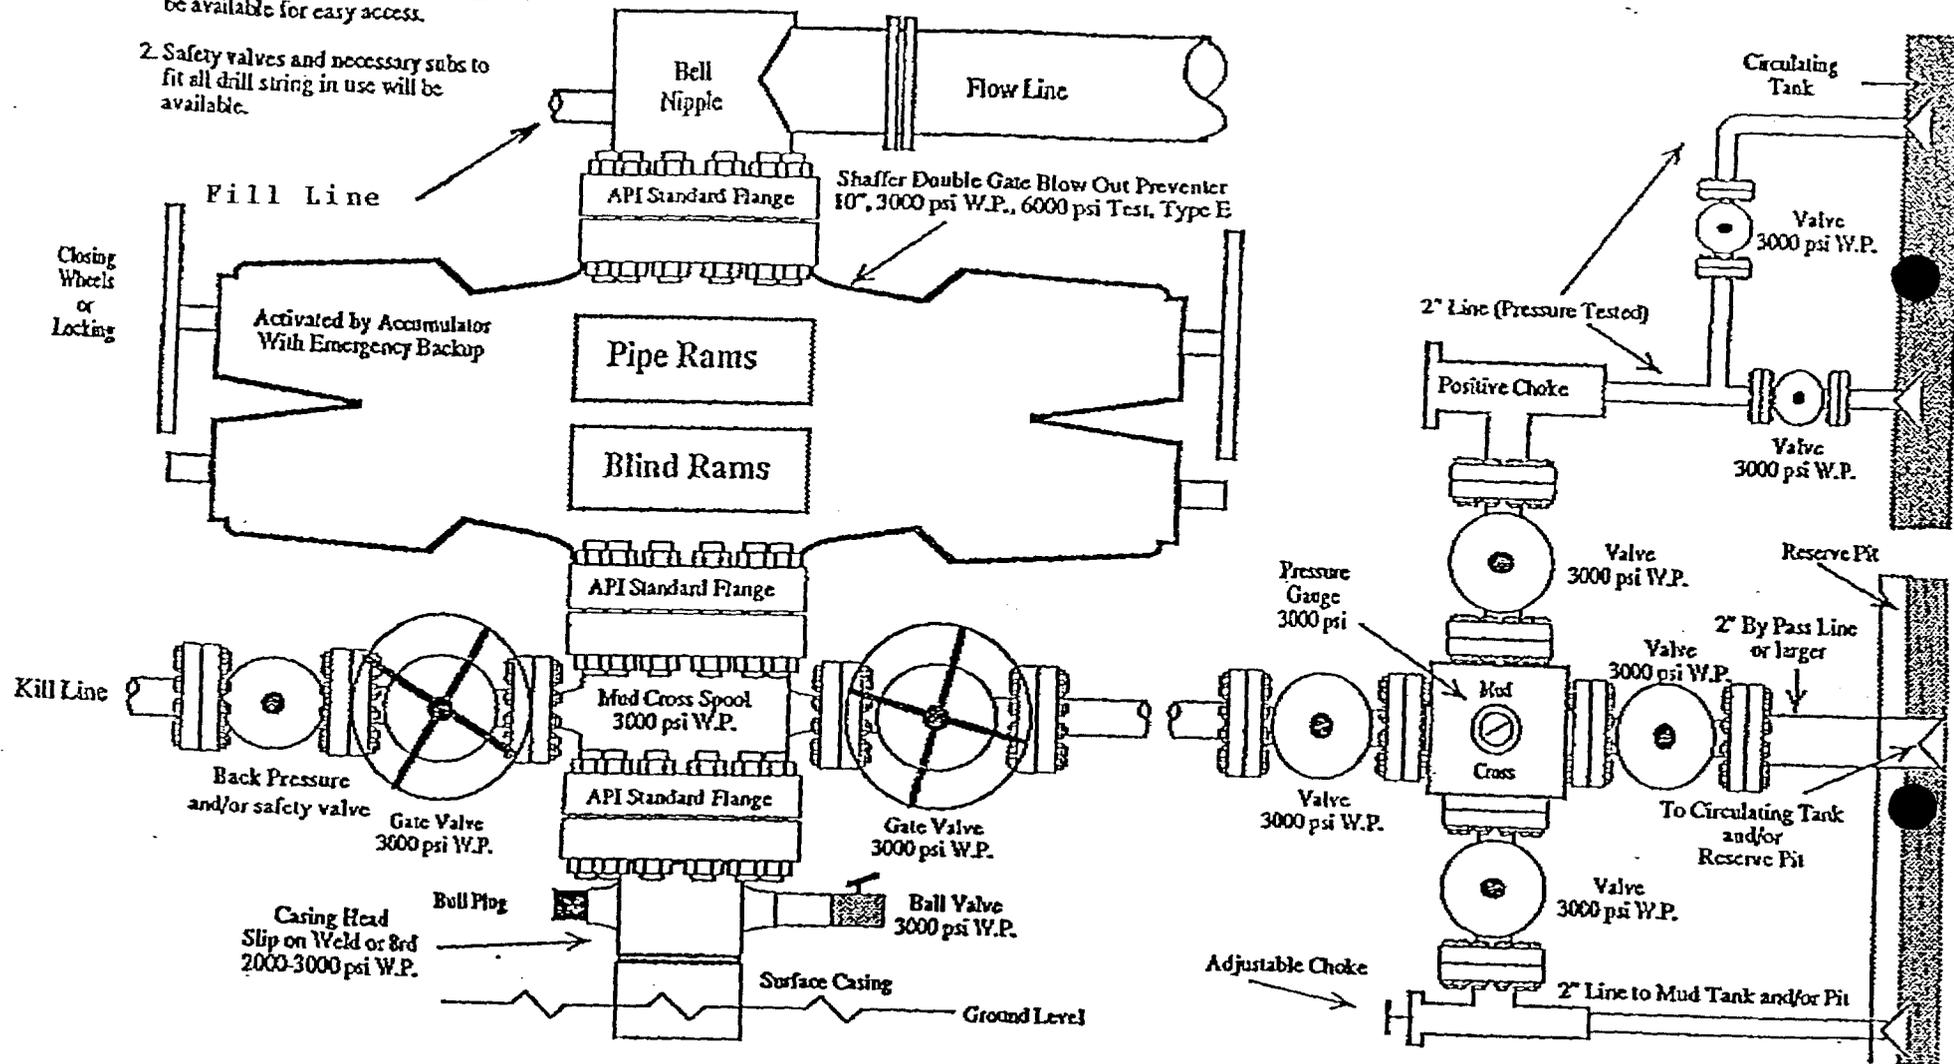

Maximum anticipated bottom hole pressure is  $\approx 1,650$  psi. No abnormal pressures, temperatures, or hydrogen sulfide are expected.

# Pressure Control Equipment

Minimum 2" Choke Line.  
 Minimum 2" Kill Line.  
 At Least One 2" Minimum Kill Line Valve.

Note: 1. An upper Kelly cock valve will be utilized during drilling. Handle will be available for easy access.

2. Safety valves and necessary subs to fit all drill string in use will be available.

Note: This equipment is designed to meet requirements for a 2-M rating standard per 43 CFR part 3160 (amended). Proper operation and testing of equipment will be carried out per standard. 2,000 psi equipment can be substituted in the drawing to meet minimum requirements per standard.

## Surface Use Plan

### 1. EXISTING ROADS & DIRECTIONS (See PAGES 7 & 8)

From the junction of US 6 and US 191 north of Helper, Utah ...  
Go NE 8.3 miles on US 191 to the equivalent of Milepost 165.75  
Then turn right and go S and E 0.8 mi. on the Emma Park/9 Mile Cutoff Road  
Then turn right and go Sand E 0.5 mi. on a field road  
Then turn right and go SW 0.3 mi. on a field road  
Then turn left and go NE 0.1 mi. on a field road onto the pad

### 2. ROAD TO UPGRADED

The existing road will be graded to remove ruts and graveled where needed.  
Road location and dimensions will not change.

### 3. EXISTING WELLS

There are 9 P&A wells, 3 gas wells, and 2 water wells within a mile radius.  
There are no existing oil, injection, or disposal wells within a mile.

### 4. PROPOSED PRODUCTION FACILITIES

Well will tie into existing pipeline on southwest side of pad.

### 5. WATER SUPPLY

Water will be trucked from an existing water well (right #91-4983) at Huber's central production facility in Section 11, from town, or from

produced water from Huber's wells.

#### 6. CONSTRUCTION MATERIALS & METHODS

At the land owner's request, PG&E left the P&A well unreclaimed and ready for use. A diversion ditch will be built south of the pad. Steel tanks will be used instead of a pit. Gravel will be brought from town.

#### 7. WASTE DISPOSAL

All trash will be placed in a trash cage. When full, it will be hauled to a state approved landfill. There will be no trash burning or disposal of trash in the reserve pit. Chemical toilets will be used for human waste. Their contents will be disposed of in state approved facilities.

#### 8. ANCILLARY FACILITIES

There will be no airstrip or formal camp. Camper trailers will be on site for the company man, roughnecks, mud logger, tool pusher, etc.

#### 9. WELL SITE LAYOUT

See PAGES 9 & 10 for depictions of the well pad, cross sections, cut and fill diagrams, reserve pit, burn pit, access road onto the pad, parking, living facilities, and rig orientation.

#### 10. RECLAMATION

After completing drilling, the well site and immediate area will be cleared of

J. M. Huber Corporation  
Huber-Shimmin Trust WDW 10-11  
1999' FSL & 2006' FEL  
Sec. 11, T. 12 S., R. 10 E.  
Carbon County, Utah

all debris and material not needed for future use. Ruts will be graded and the pad left graveled for the land owner's use.

11. SURFACE OWNER

The well site is on private land owned by John Marshall, Trustee in Trust for the Dean Shimmin Trust. Contact is Dean Shimmin @ (801) 375-2002.

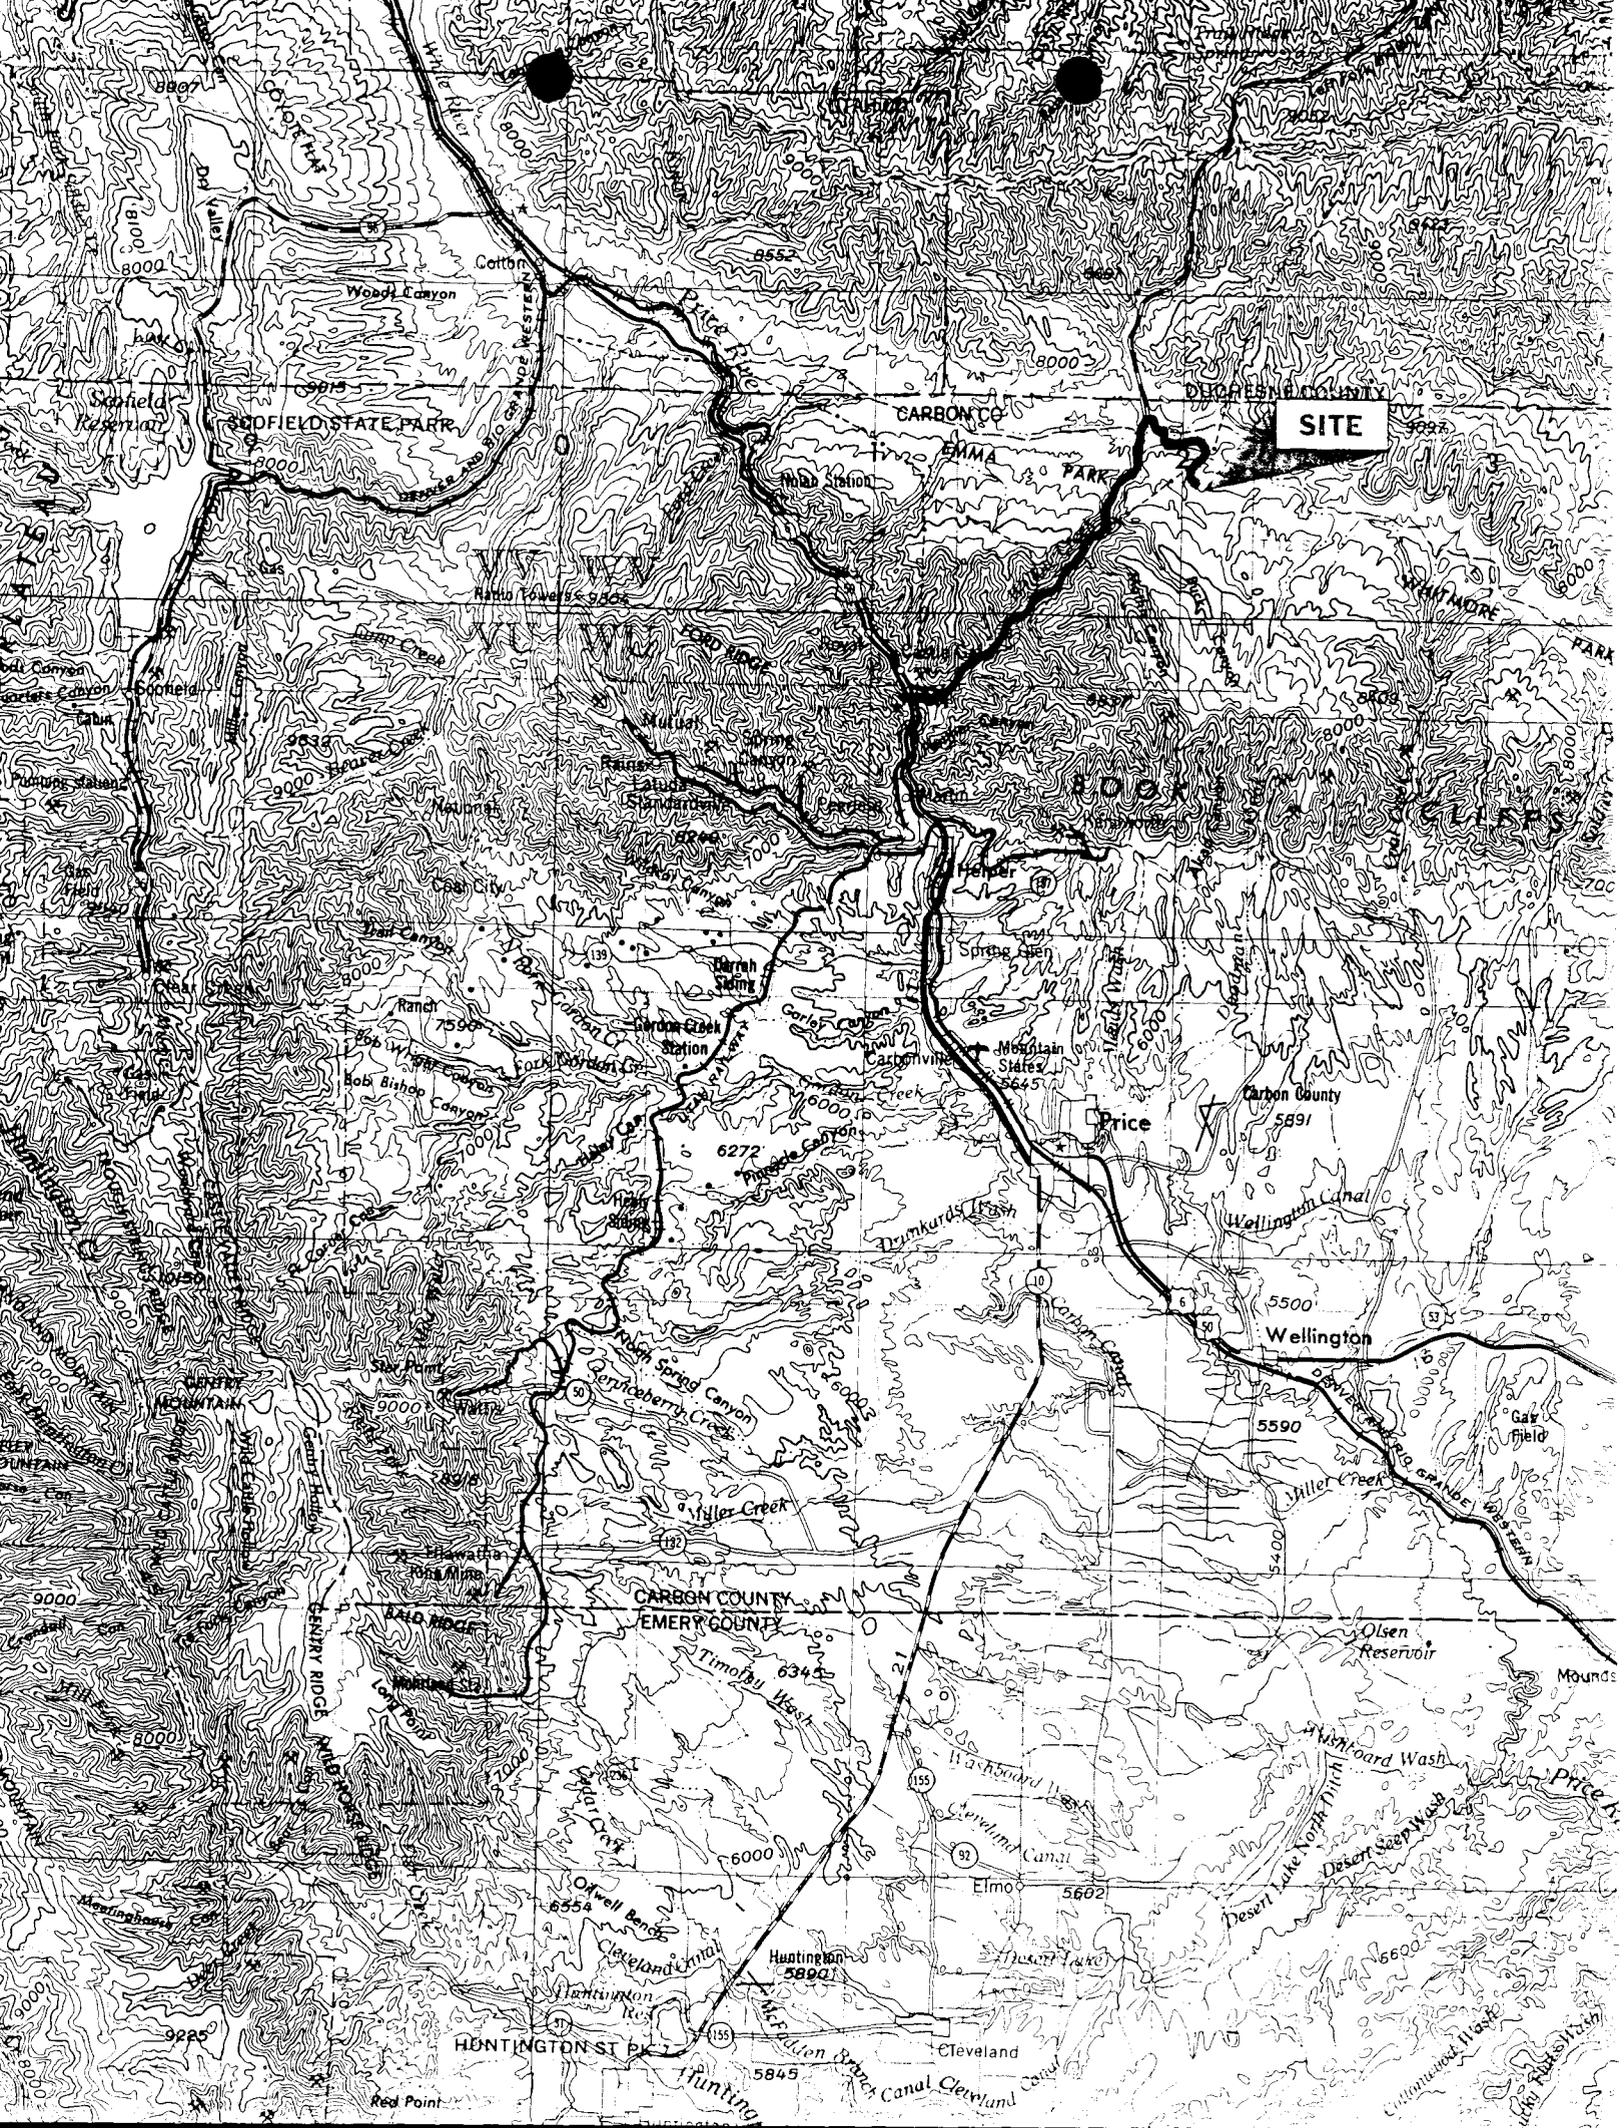

12. REPRESENTATION

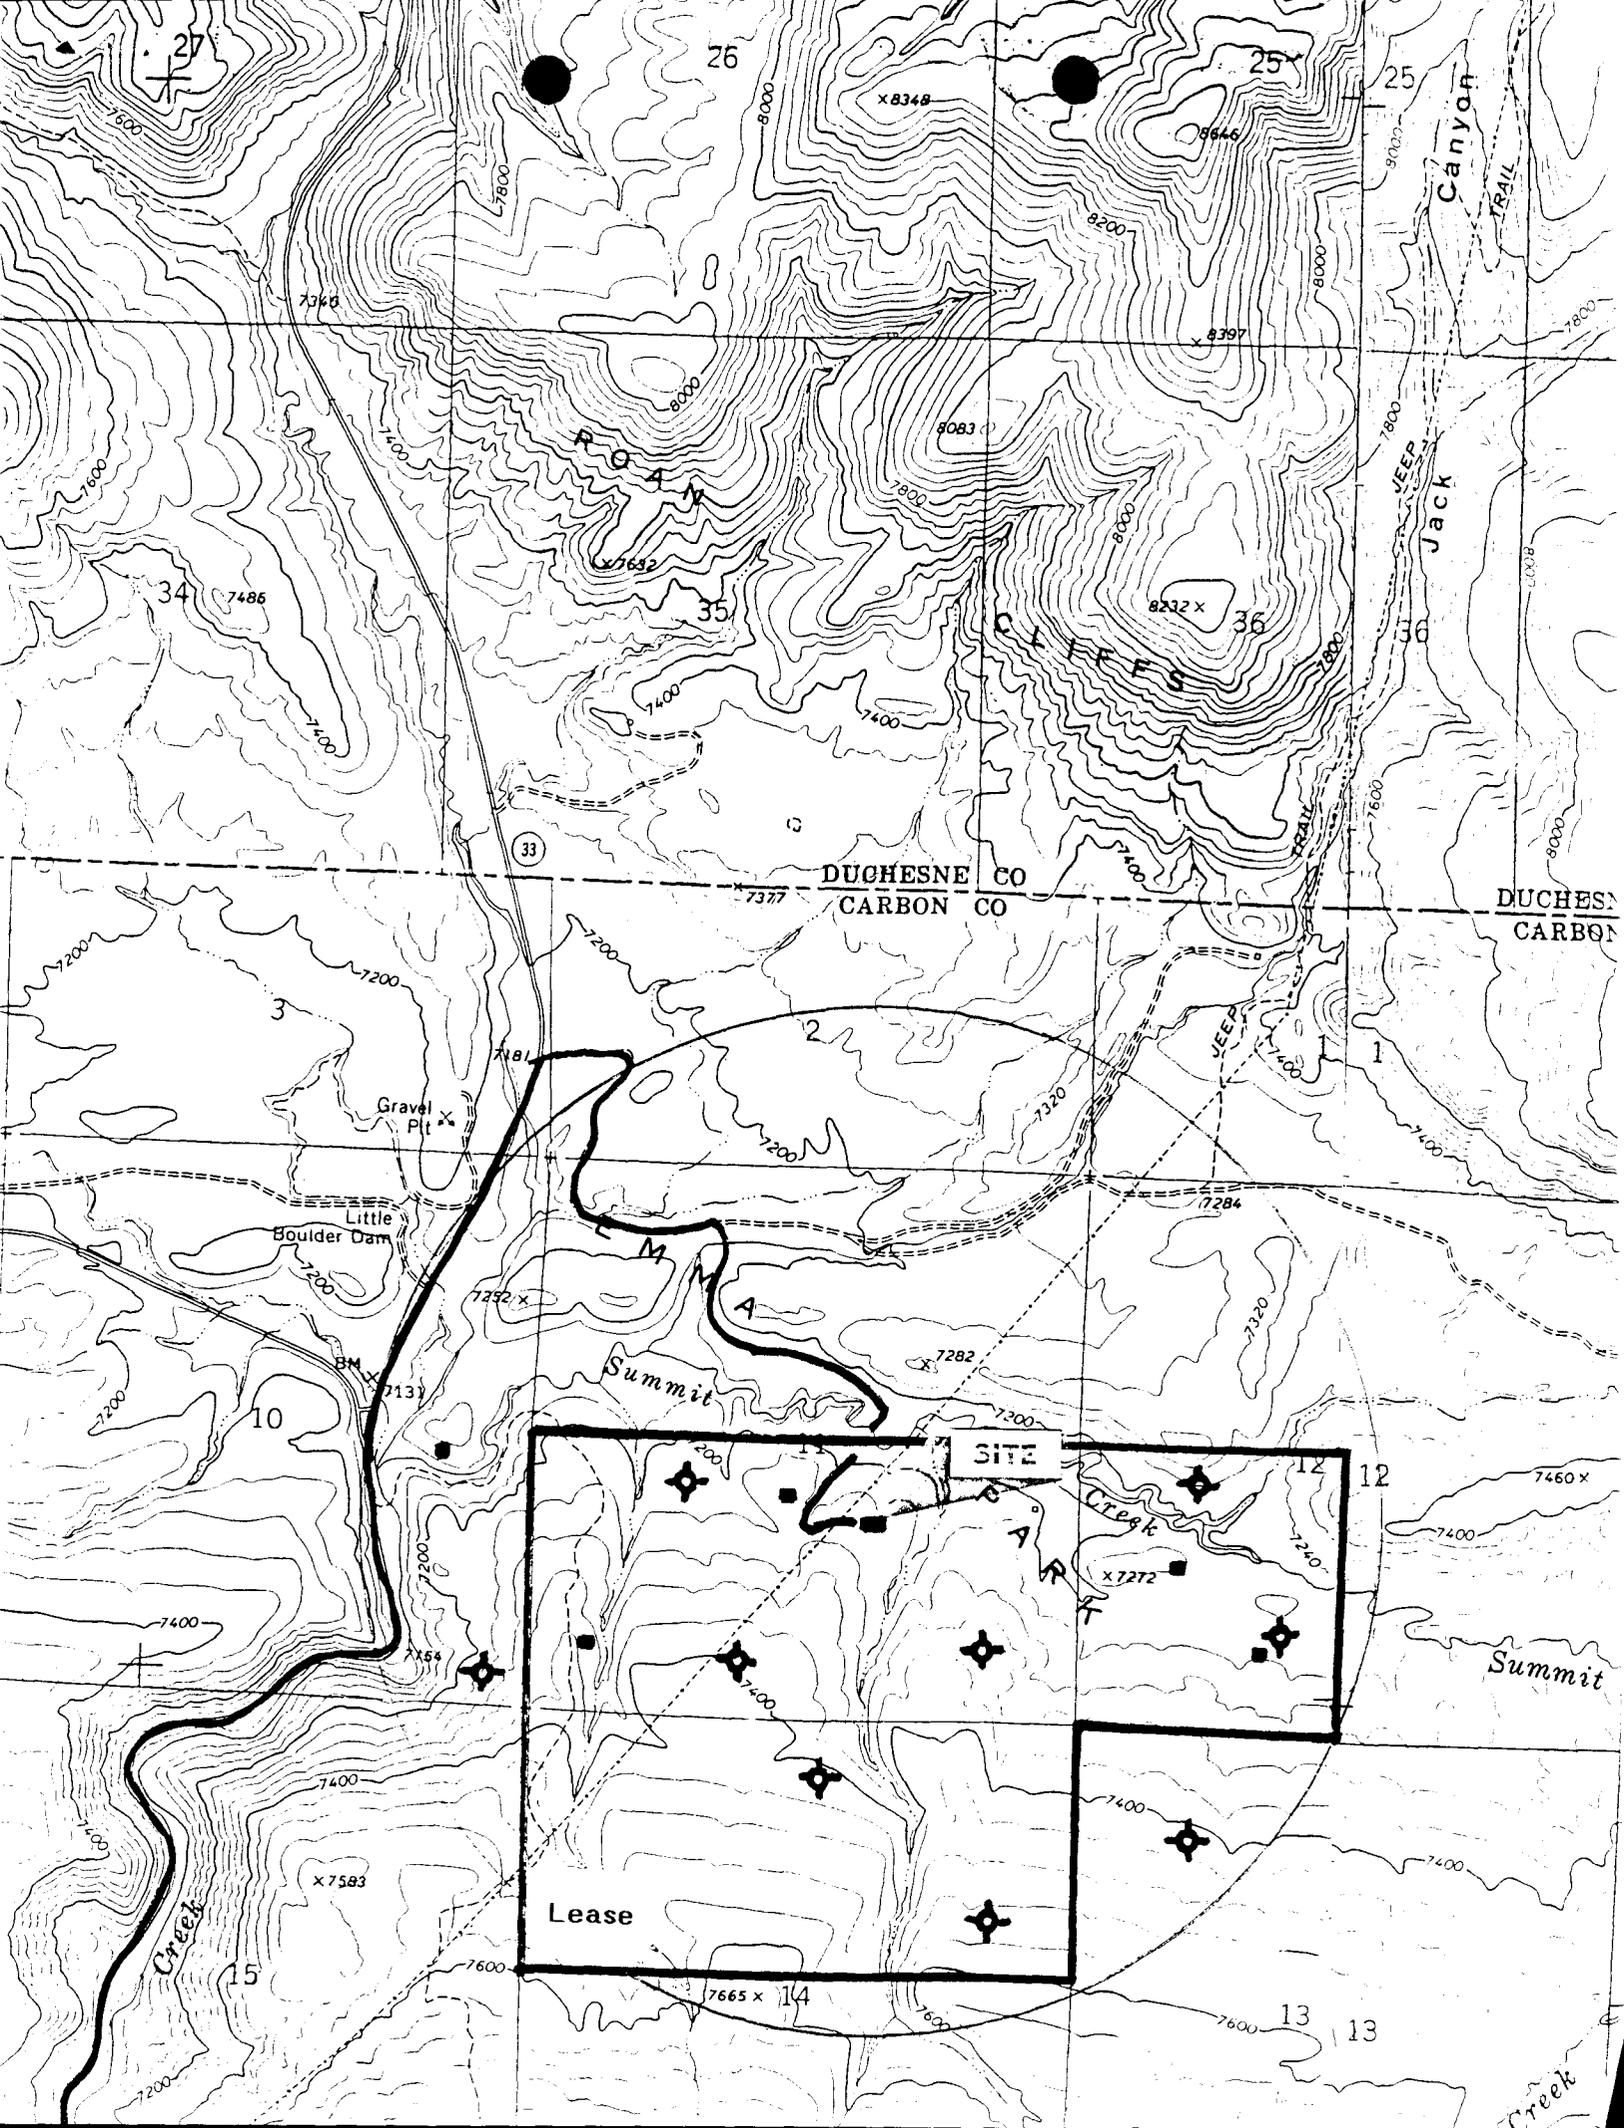

Anyone having questions concerning the APD should contact:

Brian Wood  
Permits West, Inc.  
37 Verano Loop  
Santa Fe, NM 87505  
(505) 466-8120    FAX: (505) 466-9682    Mobile: (505) 699-2276

The field representative during drilling will be:

Larry Sessions

**NOTICE OF AGENCY ACTION  
CAUSE NO. UIC-146**

BEFORE THE DIVISION OF OIL, GAS AND MINING DEPARTMENT OF NATURAL RESOURCES STATE OF UTAH IN THE MATTER OF THE APPLICATION OF PG & E RESOURCES COMPANY ADMINISTRATIVE APPROVAL OF THE SHIMMIN TRUST WELL LOCATED IN SECTION 11, TOWNSHIP 12 SOUTH, RANGE 10 EAST, S.L.M., CARBON COUNTY, UTAH, FOR CONVERSION CLASS II INJECTION WELL

THE STATE OF UTAH TO ALL PERSONS INTERESTED IN ABOVE ENTITLED MATTER.

Notice is hereby given that the Division of Oil, Gas and Mining ("Division") is commencing an informal adjudicative proceeding to consider application of PG & E Resources Company ("PG & E") for administrative approval of the Shimmin Trust 11-10 Well, located in Section 11, Township 12 South, Range 10 East, Carbon County, Utah, for conversion Class II injection well. The proceeding will be conducted in accordance with Utah Admin. R.649-10, Administrative Procedures.

PG & E has proposed to inject fluids into the Price River Formation interval from 2,945 to 3,122 feet in the Shimmin Trust 11-10 dis well. The injection fluid is water produced in conjunction with the extraction of coal bed methane gas from the Mesaverde Blackhawk Form in the Castlegate Field area.

PG & E has perforated the Price River Formation interval and formed swab testing operations to obtain a water sample. The analysis indicated the total dissolved solids (TDS) content of the Price River Formation water to be approximately 26,000 milligrams per (mg/l). Therefore, the disposal interval does not constitute an underground source of drinking water (USDW) and an aquifer exemption not necessary.

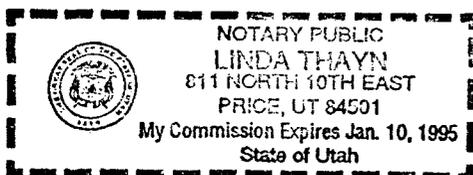

The maximum allowable injection pressure and rate will be determined after conducting step-rate pressure testing following conversion of the well.

Any person desiring to object to the application or otherwise intervene in the proceeding, must file a written protest or notice of intervention with the Division within fifteen days following publication of this notice. If such a protest or notice of intervention is received, a hearing will be scheduled before the Board of Oil, Gas and Mining. Protestants and intervenors should be prepared to demonstrate at the hearing how the matter affects their interests.

DATED this 3rd day of February, 1994.

STATE OF UTAH  
DIVISION OF OIL, GAS AND MINING

## APPLICATION FOR PERMIT TO DRILL STATEMENT OF BASIS

**Operator Name:** J. M. Huber  
**Name & Number:** Huber-Shimmin Trust 10-11  
**API Number:** 43-007-30167  
**Location:** 1/4, 1/4 NW SE Sec. 11 T. 12 S R. 10 E County Carbon

### **Geology/Ground Water:**

The setting depth of the surface casing in this well is proposed for 475' cemented back to surface with 275 sx of premium class G cement. There are 78 points of diversion within 1 mile of this location, which were developed by parties drilling in the area, some have priority dates back to 1860, most of these are municipal and the majority are wells that are completed in the Blackhawk coal. The previous injection zone in this well is the Price River Formation. A search made of the records at water rights showed that no water from active water wells is being produced from below 385', and that the 475' of surface casing covered this zone. The several springs and diversions along Willow Creek will not be impacted by new work on this well, and are protected by the surface casing and the cement at the bottom of the long string.

**Reviewer:** K. Michael Hebertson **Date:** 12/December/2000

### **Surface:**

The surface owner has been contacted and expressed no concerns about the use of this location. Overall he was happy with the operators' proposal. The surface owner was also made aware of the winter range and habitat concerns expressed by DWR and the active Sage Grouse strutting area that has been identified by DWR. He was not sympathetic to their request and has not interested in holding up work for the time frames requested. This is a previously drilled well site and no new surface disturbance will be required to reenter this well. As currently agreed to there is no provision in the surface use agreement for an injection well at this location, or anywhere on the Shimmin Trust lands.

**Reviewer:** K. Michael Hebertson **Date:** 12/December /2000

**Supplemental Review:** K. Michael Hebertson **Date:** 18/December/2000

### **Conditions of Approval/Application for Permit to Drill:**

1. Existing culverts will be cleaned and maintained and new culverts of sufficient size and length will be installed and maintained so as not to inhibit natural water flow, where necessary.
2. Water samples from the Price River Formation will be required from this well.
