PARTICIPANTS

M. Jones (DOGM), D. Hamilton (Talon). Surface owner was contacted but was unable to make the on-site.

REGIONAL/LOCAL SETTING & TOPOGRAPHY

Location lies ~1.25 miles east of Scofield Reservoir. All runoff drains into a stream and then directly into the reservoir. Topography is very steep along the slope of the hillside. A PA well exists at the site which is directly in the roadway up the mountainside at a switchback. The old pit lies to the east side of the old location and has been stabilized by vegetation. Access will consist of an old two-track that will be upgraded as needed during operation of the well.

SURFACE USE PLAN

CURRENT SURFACE USE: Grazing and wildlife habitat.

PROPOSED SURFACE DISTURBANCE: 170' X 260' w/ pit included.

LOCATION OF EXISTING WELLS WITHIN A 1 MILE RADIUS: 1 PA wells within 1 mile radius.

LOCATION OF PRODUCTION FACILITIES AND PIPELINES: Along roadway.

SOURCE OF CONSTRUCTION MATERIAL: Transported in from a local source.

ANCILLARY FACILITIES: None anticipated.

WASTE MANAGEMENT PLAN:

Portable chemical toilets which will be emptied into the municipal waste treatment system; garbage cans on location will be emptied into centralized dumpsters which will be emptied into an approved landfill. Crude oil production is unlikely. Drilling fluid, completion / frac fluid and cuttings will be buried in the pit after evaporation and slashing the pit liner. Produced water will be gathered to the evaporation pit and eventually injected into the Navajo Sandstone via a salt-water disposal well. Used oil from drilling operations and support is hauled to a used oil recycler and reused.

ENVIRONMENTAL PARAMETERS

AFFECTED FLOODPLAINS AND/OR WETLANDS: Area drains directly into Scofield Reservoir, -1.25 miles west of proposed location.

FLORA/FAUNA: Sagebrush, native grasses, quacking aspen tress, deer, elk, various small game and fowl.

SOIL TYPE AND CHARACTERISTICS: Gravelly clay loam.

EROSION/SEDIMENTATION/STABILITY: Potential for erosion due to topography.

PALEONTOLOGICAL POTENTIAL: None observed.

RESERVE PIT

CHARACTERISTICS: Dugout earthen pit as per APD.

LINER REQUIREMENTS (Site Ranking Form attached): Synthetic Liner.

SURFACE RESTORATION/RECLAMATION PLAN

As per surface use agreement with surface owner.

SURFACE AGREEMENT: In negotiation.

CULTURAL RESOURCES/ARCHAEOLOGY: None requested by surface owner.

Subject: comments on wildcat wells

The Scofield Thorpe 22-41 and Scofield Thorpe 25-13 proposed wildcat well drilling projects may require a permit, known as an Approval Order, from the Utah Division of Air Quality if any compressor stations are operating at the site. A permit application, known as a Notice of Intent (NOI) should be submitted to the Executive Secretary at the Utah Division of Air Quality at 150 N. 1950 West, SLC, UT, 84116 for review according to the Utah Air Conservation Rule R307-400, Permits, Notice of Intent and Approval Order.

Geology/Ground Water:

A well drilled at this location will likely spud into a poorly to moderately-permeable soil developed on the Cretaceous Blackhawk Formation. Ground water is likely to be encountered in the Blackhawk Formation and the Star Point, Emery, Ferron and Dakota Sandstones, all of Cretaceous age. At Castlegate Field, which is about 16 miles east, along the Colton Formation outcrop, the Spring Creek sand produced large amounts of moderately saline ground water from depths of ~1,600 feet to 2,000 feet, Total Depth. Water quality will deteriorate in the deeper strata. The nearest mapping of the base of moderately saline ground water (~15 miles east northeast) implies that the base of moderately saline ground water is likely to be above sea level and within several thousand feet of the surface. If so, quality water is likely to be encountered in permeable strata in the Mesa Verde Group and possibly even the Emery Sandstone. Application has been made for numerous water rights (including 6 springs) within a mile of this location. A P&A'd well (4300720350) is located 50' from the proposed location. Drainage is to the southwest toward the Miller Canyon drainage, which flows into Scofield Reservoir. The proposed surface and intermediate casing, cementing program and freshwater gel/polymer drilling fluid system should be sufficient protect the shallow ground water resource.

Reviewer: Christopher J. Kierst **Date:** 11/27/01

Surface:

Location lies ~1.25 miles east of Scofield reservoir. Runoff drains directly into Scofield Reservoir. Predominantly grasses and sagebrush are the vegetation types found here. Surface owner was contacted but was unable to make the onsite. Very little extra ground will be disturbed in comparison to the old drill site. Big game hunting will be an issue to the landowner and stipulations will be placed in the surface use agreement regarding this issue. The reserve pit will block the access road continuing up the mountain during drilling and completion phases of the well. A passable route needs to be constructed on the NW side of the location to allow for access further up the mountain. Dust control will also be an issue to the landowner.

Reviewer: Mark L. Jones **Date:** November 20, 2001

Conditions of Approval/Application for Permit to Drill:

1. Culverts sufficient to manage expected runoff, standing and surface water in crossed drainages.
2. Berm location and pit.
3. A synthetic liner with a minimum thickness of 12 mils shall be properly installed and maintained in the reserve pit.
4. Dust control during construction, drilling, and completion phases of the well.

Gentlemen:

The attached Application for Permit to Drill is for Prima Oil and Gas Company's replacement well for the Scofield Thorpe 22-41, API Number 43-007-30811. The original well on this location was abandoned due to drilling tools stuck in the hole. The rig was skidded approximately 15' and the replacement well was spudded and is being drilled.

No changes in surface facilities were made when the rig was skidded. All aspects of the original permit will remain the same, except an additional string of casing will be run to protect surface waters. This casing string is outlined on the Application for Permit to Drill.

If there are any questions concerning the replacement well, please contact Lisa Morris at Prima at 303-297-2300.

Sincerely,

Gary J. Johnson
Consultant

ENGINEERING STIPULATIONS: NONE

Collapse strength is based on the Westcott, Dunlop & Kemler method of biaxial correction for tension.

Collapse is based on a vertical depth of 6500 ft, a mud weight of 9 ppg. The casing is considered to be evacuated for collapse purposes.

Burst strength is not adjusted for tension.

Engineering responsibility for use of this design will be that of the purchaser.

Dear Diana:

Enclosed is the APD for the above mentioned well. We would like to submit this as a Tight Hole. This is my first permit, so if I need more information, please let me know.

I have flagged a page in Exhibit "E". Our Project Coordinator is out on holidays and I still need him to sign this sheet. I will forward the signed sheet to you as soon as he returns.

Thank you in advance and should you have any questions, I can be reached at (303) 297-2300 and my fax number is (303) 297-7708.

Sincerely,

Any Anticipated Abnormal Pressures or Temperatures

No abnormal pressures or temperatures have been noted or reported in wells drilled in the area nor at the depths anticipated in this well. Bottom hole pressure expected is 1700 psi max. No hydrogen sulfide or other hazardous gases or fluids have been found, reported or are known to exist at these depths in the area.

8. Anticipated Starting Date and Duration of the Operations.

The well will be drilled approx.: September 22, 2002.

Verbal and/or written notifications listed below shall be submitted in accordance with instructions from the Division of Oil, Gas & Mining:

- (a) prior to beginning construction;
- (b) prior to spudding;
- (c) prior to running any casing or BOP tests;
- (d) prior to plugging the well, for verbal plugging instructions.

Spills, blowouts, fires, leaks, accidents or other unusual occurrences shall be reported to the Division of Oil, Gas & Mining immediately.

1. Existing Roads

- a. The proposed access road will encroach the paved-surfaced SR-96 under Utah Department of Transportation Maintenance in which approval is received. The approach will be upgraded consistent with Utah Department of Transportation specifications.
- b. We do not plan to change, alter or improve upon any other existing state or county roads. Existing roads will be maintained in the same or better condition. See Exhibit "B".
- c. An existing private road exists from SR-96 past the plugged and abandoned well site and further across the ridge. This road will be upgraded along its existing centerline and grade for the steep sections for a distance of approximately 12,500 feet.

2. Planned Access

No new access is required (See Exhibit "B")

- a. Maximum Width: None
- b. Maximum grade: None
- c. Turnouts: None
- d. Drainage design: Numerous - 18" culverts and other drainage structures will be required along the upgraded portion of the private road. Water will be diverted around the road as necessary and practical.
- e. If the well is productive, the road will be surfaced and maintained as necessary to prevent soil erosion and accommodate year-round traffic.
- f. Existing trees will be left in place where practical to provide screening and buffer areas.

RECEIVED

3. Location of Existing Wells

- a. See Exhibit "B". There are no proposed and one existing well within a one mile radius of the proposed location.

4. Location of Existing and/or Proposed Facilities

- a. If the well is a producer, installation of production facilities will be as shown on Exhibit "H".
- b. Rehabilitation of all pad areas not used for production facilities will be made in accordance with landowner stipulations.

5. Location and Type of Water Supply

- a. Water to be used for drilling will be obtained from the Skyline Mine.
- b. Water will be transported by truck over approved access roads.
- c. No water well is to be drilled for this location.

6. Source of Construction Materials

- a. Any necessary construction materials needed will be obtained locally from a private source and hauled to the location on existing roads.
- b. No construction or surfacing materials will be taken from Federal/Indian land.

7. Methods for handling waste disposal

- a. As the well is expected to be air drilled, a small reserve pit will be constructed with a minimum of one-half the total depth below the original ground surface on the lowest point within the pit. The pit will be lined with a synthetic liner. Three sides of the reserve pit will be fenced within 24 hours after completion of construction and the fourth side within 24 hours after drilling operations cease with four strands of barbed wire, or woven wire topped with barbed wire to a height of not less than four feet. The fence will be kept in good repair while the pit is drying.

RECEIVED

- b. Following drilling, the liquid waste will be evaporated from the pit and the pit backfilled and returned to natural grade. No liquid hydrocarbons will be discharged to the reserve pit or location.
- c. In the event fluids are produced, any oil will be retained in tanks until sold and any water produced will be retained until its quality can be determined. The quality and quantity of the water will determine the method of disposal.
- d. Trash will be contained in a portable metal container and will be hauled from location periodically and disposed of at an approved disposal site. Chemical toilets will be placed on location and sewage will be disposed of at an appropriate disposal site.

8. Ancillary Facilities

- a. We anticipate no need for ancillary facilities with the exception of trailers to be located on the drill site.

9. Well-site Layout

- a. Available topsoil will be removed from the location and stockpiled. Location of the rig, reserve and blooie pits, and drilling support equipment will be located as shown on Attachment "C".
- b. A blooie pit will be located 100' from the drill hole. A line will be placed on the surface from the center hole to the blooie pit. The blooie pit will not be lined, but will be fenced on four sides to protect livestock/wildlife.
- c. Access to the well pad will be as shown on Exhibit "B".
- d. Natural runoff will be diverted around the well pad.

10. Plans for Restoration of Surface

- a. All surface areas not required for producing operations will be graded to as near original condition as possible and contoured to maintain possible erosion to a minimum.
- b. Available topsoil will be stockpiled and will be evenly distributed over the disturbed areas and the area will be reseeded as prescribed by the landowner.
- c. Pits and any other area that would present a hazard to wildlife or livestock will be fenced off when the rig is released and removed.

RECEIVED

- d. Any oil accumulation on the pit will be removed or overhead flagged as dictated by then existed conditions.
- e. Rehabilitation will commence following completion of the well. Rat and mouse holes will be filled immediately upon release of the drilling rig from the location. If the well-site is to be abandoned, all disturbed areas will be re-contoured to the natural contour as is possible.

11. Surface Ownership

- a. The well-site and access road will be constructed on lands owned by Paul and Carolyn Jacob; 349 East 2nd South, Pleasant Grove, Utah 84062; 1-801-785-2300. The operator shall contact the landowner and the Division of Oil, Gas and Mining 48 hours prior to beginning construction activities.

12. Other Information:

- a. The primary surface use is wildlife habitat and grazing. The nearest dwelling is approximately 1,800 feet southwest. Nearest live water is Miller Canyon Creek 1,800' southwest.
- b. If there is snow on the ground when construction begins, it will be removed before the soil is disturbed, and piled downhill from the topsoil stockpile location.
- c. The back-slope and fore-slope will be constructed no steeper than 4:1.
- d. All equipment and vehicles will be confined to the access road and well pad.
- e. A complete copy of the approved Application for Permit to Drill (APD) including conditions and stipulations shall be on the well-site during construction and drilling operations.

There will be no deviation from the proposed drilling and/or workover program without prior approval from the Division of Oil, Gas & Mining.

DIV. OF OIL, GAS & MINING

SURFACE AND DAMAGE AGREEMENT

This agreement is made and entered into between Paul E. Jacob and Carolyn H. Jacob, as Trustees of the Paul & Carolyn Jacob Trust dated 2-22-96, whose address is 349 East 200 South, Pleasant Grove, UT 84062 hereinafter referred to as "Owner" and Prima Oil & Gas Company, whose address is 1099 18th Street, Suite 400, Denver, CO 80202, hereinafter referred to as "Operator".

IT IS AGREED AS FOLLOWS:

1. **Oil and Gas Lease.** Owner is the owner of the surface estate in certain lands located in Carbon County, Utah said lands are more fully described in Exhibit "A" attached to and made a part hereof (Subject Lands). All of the Subject Lands are subject to oil and gas leases currently owned by Operator. Operator desires to drill a well or wells on the Subject Lands. Nothing in this agreement shall be deemed to alter any rights or obligations established, granted or conveyed by the oil and gas leases.
2. **Right-of-Way.** To the extent not already granted by the oil and gas leases, Owner grants Operator, its employees and designated agents, a private nonexclusive right-of-way to enter upon and use the Subject Lands as specified herein for the purpose of drilling, completing and producing oil and gas wells on the Subject Lands.
3. **Notification and Consultation.** Operator shall notify Owner prior to entry upon the Subject Lands and shall consult with Owner as to the location of each well, pipeline, power line, battery site, gathering system and other facilities to be placed on the Subject Lands. To the extent practicable, Operator will use existing roads on the Subject Lands for its operations, and if construction of a new road is required, Operator will consult with Owner, so as to locate the new road in a manner so as to cause the least interference practical with Owner's operations on the Subject lands. If a pipeline or gathering system is to be installed by Operator, Operator will locate the pipeline and gathering system in a manner so as to cause the least interference practical with Owner's operations on the affected land.
4. **Termination of Rights.** The rights granted by Owner to Operator shall terminate (i) When the Oil and Gas Lease(s) terminate, or (ii) Operator permanently ceases its operations on the Subject Lands, whichever shall occur first. Upon termination of this agreement, Operator will execute and deliver to Owner a good and sufficient recordable release and surrender of all of Operator's rights under this agreement, and will promptly remove all equipment and property used or placed by Operator on the Subject Lands unless otherwise agreed by Owner in writing.
5. **Non-exclusive Rights.** The rights granted by Owner to Operator are non-exclusive, and Owner reserves the right to use all access roads and all surface and subsurface uses of the Subject Lands affected by this agreement and the right to grant successive easements thereon or across on such terms and conditions as Owner deems necessary or advisable.

6. **Payments.** As compensation for surface damages, Operator will pay to Owner the following:
- a. **Well locations.** Operator will pay to Owner one thousand, six hundred dollars, (\$1600) for each well location. This amount shall be paid by Operator to Owner before entering upon the premises to drill the well.
 - b. **Roads.** Operator shall pay to Owner an access fee of twelve dollars (\$12.00) per rod for use of existing roads on the Subject Lands, and the rate of twelve dollars (\$12.00) per rod for new roads constructed by Operator or existing roads improved by Operator on the Subject Lands. Operator shall provide Owner with a plat showing the location and length of all roads promptly after their first use, construction or improvement.
 - c. **Rights of Way/Info Structure.**
 - (i). Operator shall pay to Owner the same twelve dollars (\$12.00) per rod for an infrastructure right of way equal to 20 feet in width, within which Operator may place its infrastructure which shall include but not be limited to oil or gas pipelines, waterlines, and electric lines. Infrastructure installed in the road right of way shall be paid at six dollars and 25 cents (\$6.25) a rod. This would be in addition to the twelve dollars (\$12.00) per rod already paid for the road right of way. Infrastructure installed outside the infrastructure right of way or road right of way shall be paid at twelve dollars (\$12) per square rod.
 - (ii). Operator shall be responsible for back-filling, re-packing, re-seeding and re-contouring the surface so as not to interfere with Owner's operations. Operator shall provide Owner with a plat showing the location of all pipelines and gathering systems promptly after their installation to the extent practical. All pipelines and gathering systems located by Operator on the premises shall be buried to the depth of a least three (3) feet below the surface. Owner reserves the right to occupy, use and cultivate the lands affected by such pipelines, and to grant such rights to others, so long as such use does not interfere with Operator's operations. If Operator fails to use any pipeline for a period in excess of 24 consecutive months, the pipeline shall be deemed abandoned and Operator shall promptly take all actions necessary or desirable to clean up, mitigate the effects of use, and render the pipeline environmentally safe and fit for abandonment in place. All such clean up and mitigation shall be performed in compliance with all federal, state and local laws and regulations.
 - d. **Power Lines.** Operator will consult with Owner and with the company supplying power to Operator with respect to the location of overhead power

lines prior to construction. Overhead power lines will be constructed so as to cause the least practical interference with Owner's visual landscape and Owner's existing and future ranching operations, and, to the extent possible, overhead power lines will be constructed along fence lines or property lines.

e. **Gathering, Metering and Portable Compression Sites.** For each central gathering facility or "battery site" (which includes portable compression facilities) Operator shall pay to Owner an annual rental of \$400 per acre. This amount shall be paid by Operator to Owner before entering upon the premises to construct the battery site.

7. **Locations.** All well site locations shall be limited to approximately two (2) acres of land while drilling and no more than one (1) acre for permanent facilities. No wells shall be drilled within three hundred feet (300') of any residence, house or barn on the property without the prior written consent of Owner, which consent shall not be unreasonably withheld. No permanent housing or dwelling unit shall be constructed or placed on Owner's land by Operator.

8. **Operations.** Operator shall at all times keep the well sites, roadways, and pipelines in safe and good order, free of noxious weeds, litter and debris, and shall spray for noxious weeds upon reasonable demand therefor by Owner not to exceed two (2) times per year. Operator shall maintain the surface of the existing roads and any newly constructed roads in good repair and a state of reasonable condition. Operator shall use all reasonable means to try to keep dust from its roads at a minimum. Operator shall limit travel as much as practical when muddy conditions prevail. All roads shall be constructed with appropriate ditches and drain culverts to allow proper drainage off of said roads and also to prevent water from backing up along said roads.

9. Operator shall post a sign or signs which state the following:

- **MAXIMUM SPEED LIMIT IS 15 MILES PER HOUR**
- **YOU MUST CLOSE ALL GATES BEHIND YOU**
- **YOU MUST KEEP DUST TO A BARE MINIMUM**
- **YOU MUST STAY ON DESIGNATED ROADWAYS**
- **NO LITTERING**
- **NO DOGS**
- **NO FIREARMS**
- **NO DRUGS**
- **NO ALCOHOLIC BEVERAGES**
- **NO HUNTING OR FISHING**
- **NO FIRES**

VIOLATION OF ANY OF THE ABOVE WILL RESULT IN YOUR EXPULSION FROM THE PROPERTY

Operator shall not permit the release or discharge of any toxic or hazardous chemicals or wastes on the Subject Lands. Operator shall remove only the minimum amount of vegetation necessary for the construction of roads and facilities. Topsoil shall be conserved during excavation and reused as cover on disturbed areas to facilitate re-growth of vegetation. All surface facilities not subject to safety equipment shall be painted to blend with the natural color of the landscape. Operator will attempt to control dust by using water treated with magnesium chloride on the roads if such is available at a reasonable cost.

- 10. **New Roads.** Any new roads constructed by or for Operator shall be limited to twenty (20) feet in width for the actually traveled roadbed, together with a reasonable width, not to exceed fifteen (15) feet from the edge of the actually traveled roadbed for fills, shoulders and crosses. No permanent roads will be constructed unless absolutely necessary. Owner will be consulted as to the location of the road. Operator shall annually maintain existing and newly constructed roads used by Operator to the reasonable satisfaction of Owner, which maintenance may include shaling, ditching, graveling, blading, watering, installing and cleaning culverts, and spraying for noxious weeds. Any new roadway, infrastructure and above ground power line right of way constructed in accordance with the terms hereof, shall be so constructed with a view of minimizing the extent of surface alteration and damage to meadows, water springs, ponds, and to maintain to the maximum extent practicable, existing aesthetic values of the Subject Lands.
- 11. **Fences and Gates.** Operator, at the written request of Owner, shall fence all sludge pits and areas of danger so as not to be accessible to grazing livestock and said sites to be covered, filled and reclaimed at the termination of the need for said pits or termination of operations. Operator shall keep all cattle guards and fences clean and in good repair. Operator shall construct and install cattle guards with gates, if specifically requested by Owner, at locations where Operator must go through Owner's fences. If applicable and as much as reasonably practical, all gates are to be kept closed. The main entrance gates shall be closed and locked at the end of each day's use with Operator's personal lock in series with Owner's lock/chain and an extra key or the combination to the lock is to be furnished to Owner thereby avoiding the event of Owner being locked out of the Subject Lands.
- 12. **Improvements.** No fences, cattle guards or other improvements on the Subject Lands shall be cut or damaged by Operator without prior consultation with Owner. Operator shall institute safeguards to protect the rights and property of the Owner. Upon final termination of Operator's rights under this agreement, Operator shall return all roads and other rights-of-way or sites as nearly as practical to the condition which they were in prior to the execution of this agreement, unless otherwise agreed by Owner. All disturbed areas caused by Operator's activities will be reseeded, unless otherwise agreed by Owner. Cattle guards shall be removed and fences restored as nearly as practical to the original condition unless otherwise agreed by

Owner. If Operator damages any fences, Operator shall replace or repair such fence with the same type of fence in existence at the time of the damage.

- 13. **Additional Damages.** The payments herein provided for are acknowledged by Owner as sufficient and in full satisfaction for damages to Owner caused or created by the reasonable and customary entry, rights-of-way and operation and use of the roads and well sites, but do not include damage to livestock, buildings or improvements, or injuries to persons or to any damage or destruction caused to Owner's wells or water supply on the property. Operator shall be liable for damages if, as a result of its operations hereunder, any water on or under the premises which had been potable is affected to the extent that it is rendered non-potable for humans, cattle or other ranch animals on Owner's premises, or any such water supply, well or reservoir be destroyed or its output diminished to the extent that it is no longer suitable for the purpose it was previously used for. Operator shall be liable for any downstream damage caused to other lands or the operations of other landowners as a direct result of Operator's operations. This agreement does not relieve Operator from liability due to Operator's negligence or due to spills or discharges of any hydrocarbon or toxin or hazardous chemicals or wastes, or from leaks or breaks in Operator's pipelines. Damage to livestock and damage to crops shall be paid for by Operator at current market value.
- 14. **Restoration.** Unless Owner otherwise agrees in writing, upon termination of any of Operator's operations on the Subject Land, Operator shall fully restore the surface of the Subject Lands affected by such terminated operations as nearly as practicable to the contours which existed prior to such operation. Operator shall reseed the soil on the drill site and access road as well as all other areas of such disturbance with seed mix determined in consultation with Owner. The seed mix shall be of a type customarily used in the area for similar purposes. Reseeding is to be done by a drill where practical. If the seed fails to grow, Operator will reseed no less than 3 consecutive years. Operator agrees to temporarily fence areas that have been newly reseeded.
- 15. **No Warranty.** Owner makes no warranty of title or otherwise in entering into this agreement; provided, however, if it is determined that Owner does not have the right to authorize Operator to use the lands affected by this agreement for the purposes set forth herein, then Operator's sole remedy shall be to recover from Owner those payments made by Operator for the rights which Owner did not have the right to grant to Operator.
- 16. **Enforcement Costs.** If a dispute arises during the term of this agreement, and should either party bring an action in court seeking enforcement of the terms of this agreement, then the losing party shall assume and pay all of the costs and reasonable attorney fees of the prevailing party.
- 17. **Indemnification.** To the maximum extent permitted by law, Operator will

indemnify, defend and hold owner, and if applicable, Owner's officers, directors, employees, agents, successors and assigns harmless from any and all claims, liabilities, demands, suits, losses, damages and costs (including reasonable attorney's fees) which may arise out of or be related to Operator's activities on the Subject Land.

- 18. **Notices.** Notice may be given to either party to this agreement by depositing the same in the United States mail postage prepaid, duly addressed to the other party at the address set out below. Such notice shall be deemed delivered when deposited in the United States mail.

Following is a letter requesting exception to spacing for the Prima -- Scofield Thorpe 22-41X Rig Skid.

I was thinking they would include this information in the APD but I guess they did not.

Please review the attached and let me know if there are any changes to be made prior to me submitting the hard copy.

Thank you for your patience. Please feel free to contact me if you have any questions or need additional information.

Drilled 8 3/4 hole to 3100 feet. Cut 5 cores from 3100 to 3534 feet. Ran DST #1 from 3419 to 3554 feet. Drilled 8 3/4 hole fr to 6013 feet. Ran e-logs from 6013 feet to base of 9 5/8 casing at 2857 feet KB (AIL/LDL/CNL/GR/SP/CAL).

Ran 141 joints of 7-inch, 23#, J-55 casing to 6008 feet KB and cemented w/100 sx class G cement w/ 0.2% CD-32, 0.5% F Bumped with 300 psi, held. Installed and tested BOP's, blind rams and casing to 1500 psi. Picked up 6 1/4-inch bit and 3 1/2 drill pipe and drilled ahead with air mist to 6015 feet.

Ran in hole and cut core from 6015 to 6025 feet. Drilled to 6070 feet and cut core from 6070 to 6074.5 feet. Ran DST #2 f 6000 to 6074 feet. Ran e-logs from 6074 feet to base of 7-inch casing at 6008 feet (AIL/LDL/CNL/GR/SP/CAL). Drilled a TD of 6247 feet and ran same suite of logs from TD to 6008 feet.

Ran 4 1/4 liner to TD (6247) feet and cemented with 60 sx premium lite II high strength cement. Circulated out excess ceme **Capped well and shut in pending completion work in Spring, 2003.** Moved rig off location November 27-28, 2002

Special items needed:

Frac tanks for acid jobs	2 @ 500 bbl
Frac tanks for frac job	2 @ 500 bbl
Fresh water treated with KCl substitute	

Recommended Procedure:

1. Install (weld) 7"x2-3/8", 5000 psi wellhead
2. Move in and rig up well completion unit with flat tank and pump.
3. Install BOP equipment
4. Rig up electric wireline unit (Weatherford). Run GR-CCL from PBTB to 5500'. Run CBL log from PBTB to 5500' at zero pressure and at 1000 psi. Pressure test casing to 4000 psi.
5. Pick up 3-7/8" bit and scraper on 2-3/8" tubing. Trip in hole with bit and scraper, - tag fill. Circulate hole clean with KCl water Swab well down leaving 3700' of fluid in hole. Trip out of hole with tubing.
6. Perforate 4-1/2" liner at 6078' to 6088' (Zone 1) with 4 SPF. Use 3-3/8" carrier with .45" jets, total 41 holes. Rig down electric wireline unit (Biggest gun Weatherford has).
7. Trip in hole with 4-1/2" RTTS packer on tubing to 6030'. Spot 750 gallons 15% HCl with 50 frac balls. Set packer. Breakdown perforations with acid at 2 to 5 BPM. Over displace acid into perforations with 20 bbl treated water.
8. Swab and flow back load water and acid. Test well for fluid and gas production
9. Release packer and trip out of hole with tubing.

Decide if interval @ 6078-6088' is capable of producing at economic volumes.

If yes -

10. Rig up electric wireline unit. Set retrievable bridge plug at 6070'.

If no -

10. Rig up electric wireline unit. Set cast iron bridge plug at 6070'.

Recommended Completion Procedure - 9/4/03

11. Perforate 4-1/2" liner 6035' to 6055' (Zone 2) with 4 SPF. Use 3-3/8" carrier gun with .45" jets, total 80 holes. Rig down electric wireline unit.
12. Trip in hole with RTTS packer on tubing to 6000'. Spot 1500 gallons 15% HCl with 90 frac balls Set packer. Breakdown perforations with acid at 2 to 5 BPM. Over displace acid into perforations with 20 bbl treated water.
13. Swab and flow back load water and acid. Test well for fluid and gas production
14. Release packer and trip out of hole with tubing.
15. Evaluate recovery to determine if further treatment (frac) of Zone 2 is necessary.

If it is determined the well needs to be frac'd, proceed as follows:

16. Move in and rig up frac equipment and casing head isolation tool.
17. Frac well down casing in accordance with BJ frac schedule. After frac, flow well back to tanks to recover frac fluid. Monitor flow back volumes and test for gas production and water production.
18. If well dies, run 4-1/2" packer on tubing to 5990'. Set packer and swab well to recover frac fluid. After load is recovered, test well for gas and water flow volumes.
19. Top kill well with treated water. Trip out of hole with tubing and packer.
20. Trip in hole with tubing with a notched collar on bottom, and an X nipple one joint off bottom. Set tubing with end of tubing below bottom perf. Rig down BOP and nipple up well head.
21. Swab well in to produce.

If it is determined the well does not need to be frac'd, proceed as follows:

22. Perforate 4-1/2" liner 5995' to 6004' (Zone 3) - will be shooting a double layer 4 1/2" & 7" with 4 SPF. Use 3-3/8" carrier gun with .45" jets, total 36 holes. Rig down electric wireline unit.
23. Trip in hole with RTTS packer on tubing to 5950'. Spot 750 gallons 15% HCl with 50 frac balls Set packer. Breakdown perforations with acid at 2 to 5 BPM. Over displace acid into perforations with 20 bbl treated water.
24. Swab and flow back load water and acid. Test well for fluid and gas production
25. Release packer and trip out of hole with tubing.
26. Evaluate recovery to determine if further treatment (frac) of Zone 3 is necessary

If it is determined Zone 3 needs to be frac'd, proceed as outline above for Zone 2.

This report must be submitted within 30 days of

- completing or plugging a new well
- drilling horizontal laterals from an existing well bore
- recompleting to a different producing formation
- reentering a previously plugged and abandoned well
- significantly deepening an existing well bore below the previous bottom-hole depth
- drilling hydrocarbon exploratory holes, such as core samples and stratigraphic tests

Re: Extended Shut-in and Temporarily Abandoned Well Requirements for
Fee or State Leases.

Dear Mr. Haefele:

As of March 2005, Berry Petroleum Company has one (1) Fee Lease Well (see attachment A) that is in non-compliance with the requirements for extended shut-in or temporarily abandoned (SI/TA) status. Wells SI/TA beyond twelve (12) consecutive months require the filing of a Sundry Notice in accordance with R649-3-36-1 for Utah Division of Oil, Gas & Mining ("Division") approval. Wells with five (5) years non-activity or non-productivity shall be plugged, unless the Division grants approval for extended shut-in time upon a showing of good cause by the operator (R649-3-36-1.3.3).

For extended SI/TA consideration the operator shall provide the Division with the following:

1. Reasons for SI/TA of the well (R649-3-36-1.1).
2. The length of time the well is expected to be SI/TA (R649-3-36-1.2), and
3. An explanation and supporting data if necessary, for showing the well has integrity, meaning that the casing, cement, equipment condition, static fluid level, pressure, existence or absence of Underground Sources of Drinking Water and other factors do not make the well a risk to public health and safety or the environment (R649-3-36-1.3).

Page 2
Mr. Richard Haefele
March 3, 2005

Submitting the information suggested below may help show well integrity and may help qualify your well for extended SI/TA. **Note: As of July 1, 2003, wells in violation of the SI/TA rule R649-3-36 may be subject to full cost bonding (R649-3-1-4.2, 4.3).**

1. Wellbore diagram, and
2. Copy of recent casing pressure test, and
3. Current pressures on the wellbore (tubing pressure, casing pressure, and casing/casing annuli pressure) showing wellbore has integrity, and
4. Fluid level in the wellbore, and
5. An explanation of how the submitted information proves integrity.

If the required information is not received within 30 days of the date of this notice, further actions may be initiated. If you have any questions concerning this matter, please contact me at (801) 538-5281.

Sincerely,

Dustin K. Doucet
Petroleum Engineer

Subject: Extended Shut-in and Temporary Abandoned Well Requirements for Fee or State Leases

Dear Ms. Fitzwater:

As of August 2016, Linn Operating, Inc. has twelve (12) Fee Lease Wells (see attachment A) that are currently in non-compliance with the requirements for extended shut-in or temporarily abandoned (SI/TA) status.

Wells SI/TA beyond twelve (12) consecutive months requires filing a Sundry Notice (R649-3-36-1). Wells with five (5) years non-activity or non-productivity shall be plugged, unless the Division grants approval for extended shut-in time upon a showing of good cause by the operator (649-3-36-1.3.3). For extended SI/TA consideration the operator shall provide the Utah Division of Oil, Gas & Mining with the following:

1. Reasons for SI/TA of the well (R649-3-36-1.1).
2. The length of time the well is expected to be SI/TA (R649-3-36-1.2), and
3. An explanation and supporting data if necessary, for showing the well has integrity, meaning that the casing, cement, equipment condition, static fluid level, pressure, existence or absence of Underground Sources of Drinking Water and other factors do not make the well a risk to public health and safety or the environment (R649-3-36-1.3).

Please note that the Divisions preferred method for showing well integrity is by MIT.

Submitting the information suggested below may help show well integrity and may help qualify your well for extended SI/TA. **Note: As of July 1, 2003, wells in violation of the SI/TA rule R649-3-36 may be subject to full cost bonding (R649-3-1-4.2, 4.3).**

1. Wellbore diagram, and
2. Copy of recent casing pressure test, and
3. Current pressures on the wellbore (tubing pressure, casing pressure, and casing/casing annuli pressure) showing wellbore has integrity, and
4. Fluid level in the wellbore, and
5. An explanation of how the submitted information proves integrity.

All Submittals should be sent via ePermit

If the required information is not received within 30 days of the date of this notice, further actions may be initiated. If you have any questions concerning this matter, please contact me at (801) 538-5281.
