RE: Prickly Pear Unit Federal #12-24  
Section 24, Township 12 South, Range 14 East  
Carbon County, Utah

Dear Ms. Whitney:

Bill Barrett Corporation (BBC) has submitted an Application for Permit to Drill the above captioned well. As we discussed in our recent telephone conversation, the requested location requires an exception location. In compliance with R649-3-3 Exception to Location and Siting of Wells, BBC submits the following required information with its request for administrative approval for the exception location:

1. BBC is the only owner within a 460-foot radius of the proposed well.
2. BBC is requesting the exception location because of Topographic conditions.
3. BBC has provided a plat with the APD package reflecting the requested location at 1271' FSL and 483' FWL.

We sincerely appreciate your prompt attention to this matter. Should you require additional information, please contact the undersigned at 303-312-8184 or by email at [dgundry-white@billbarrettcorp.com](mailto:dgundry-white@billbarrettcorp.com).

Sincerely  
Bill Barrett Corporation

Doug Gundry-White

SELF-CERTIFICATION STATEMENT

The following self-certification statement is provided per federal requirements dated June 15, 1988.

Please be advised that Bill Barrett Corporation is considered to be the operator of the following well.

Prickly Pear Unit Federal 12-24  
SW 1/4, SW 1/4, 1271' FSL, 483' FWL, Section 24, T. 12 S., R. 14 E., S.L.B.&M.  
Lease UTU 77513  
Carbon, County, Utah

Bill Barrett Corporation is responsible under the terms of the lease for the operations conducted upon the lease lands.

## HAZARDOUS MATERIAL DECLARATION

FOR WELL NO. PRICKLY PEAR UNIT FEDERAL 12-24 LEASE NO. UTU 77513.

Bill Barrett Corporation guarantees that during the drilling and completion of the above referenced well, we will not use, produce, or store, transport or dispose 10,000# annually of any of the hazardous chemicals contained in the Environmental Protection Agency's consolidated list of chemicals subject to reporting under Title III Super Amendments and Reauthorization Act (SARA) of 1986.

Bill Barrett Corporation guarantees that during the drilling and completion of the above referenced well, we will use, produce, store, transport, or dispose less than the threshold planning quantity (TPQ) of any extremely hazardous substances as defined in 40 CFR 355.

## TEN POINT PLAN

BILL BARRETT CORPORATION

Prickly Pear Unit Federal 12-24

Surface location SW 1/4, SW 1/4, 1271' FSL 483' FWL, Section 24, T. 12 S., R. 14 E., .S.L.B.&M.  
Carbon County, Utah

### 1,2,3 Estimated Tops of Geological Markers and Formations Expected to Contain Water, Oil and Gas and Other Minerals

<u>Formation</u>	<u>Depth</u>
Green River	surface
Wasatch	3040'*
North Horn	4785'*
Price River	6700'*
Base of Upper PR	7020'
Bluecastle	7880'*
Sego U	8140'
Castlegate	8560'*
Blackhawk	8810'*
Star Point 1	9135'*
Star Point 2	9260'*
Star Point 3	9335'*
TD	10,000'

*McSider*

#### \*PROSPECTIVE PAY

Star Point Sands 1, 2, & 3 are primary objectives for oil/gas

All other formations identified "\*" are secondary objectives for oil/gas

### 4 Casing Program

<u>HOLE SIZE</u>	<u>SETTING</u>	<u>DEPTH</u>	<u>SIZE</u>	<u>WEIGHT</u>	<u>GRADE</u>	<u>THREAD</u>	<u>CONDITION</u>
	<u>from</u>	<u>to</u>					
12-1/4"	surface	1,000'	9-5/8"	36#	J or K 55	ST&C	New
7-7/8"	surface	10,000'	5-1/2"	17#	N-80	LT&C	New

### 5 Cementing Program

9-5/8" Surface Casing      approximately 240 sx Halliburton Light Premium with additives mixed at 12.7 ppg (yield = 1.85 ft<sup>3</sup>/sx) and 180 sx Premium cement with additives mixed at 15.8 ppg (yield = 1.16 ft<sup>3</sup>/sx) circulated to surface with 100% excess

5-1/2" Production Casing      approximately 1095 sx 50/50 Poz Premium cement with additives mixed at 13.4 ppg (yield = 1.49 ft<sup>3</sup>/sx).  
Top of cement to be determined by log and sample evaluation; estimated TOC 2500'.

**6. Mud Program**

<u>INTERVAL</u>	<u>WEIGHT</u>	<u>VISCOSITY</u>	<u>FLUID LOSS</u>	<u>REMARKS</u>
0 - 40'	8.3 - 8.6	27-40	--	Native Spud Mud
40 - 1000'	8.3 - 8.6	27-40	15 cc or less	Native/Gel/Lime
1000 - TD	8.6 - 9.5	38-46	15 cc or less	LSND/DAP

Sufficient mud materials to maintain mud properties, control lost circulation and to contain "kick" will be available at wellsite.

**7. BOP and Pressure Containment Data**

<u>Depth Intervals</u>	<u>BOP Equipment</u>
0 - 1000'	No Pressure Control Required
1000 - TD	11" 3000# Ram Type BOP 11" 3000# Annular BOP

Drilling spool to accommodate choke and kill lines.  
 Ancillary and choke manifold to be rated at 3000 psi.

ANCILLARY EQUIPMENT AND CHOKE MANIFOLD RATED AT 3000#.  
 ALL BOP AND BOPE TESTS WILL BE IN ACCORDANCE WITH THE REQUIREMENTS  
 OF ONSHORE ORDER NO. 2.

THE BLM AND THE STATE OF UTAH DIVISION OF OIL, GAS AND MINING WILL BE  
 NOTIFIED 24 HOURS IN ADVANCE OF ALL BOP PRESSURE TESTS.

**8. Auxiliary equipment**

- a) Upper kelly cock; lower Kelly cock will be installed while drilling
- b) Inside BOP or stab-in valve (available on rig floor)
- c) Safety valve(s) and subs to fit all string connections in use
- d) Mud monitoring will be visually observed

**9. Testing, Logging and Core Programs**

Cores	None anticipated
Testing	None anticipated; drill stem tests may be run on shows of interest
Sampling	30' to 50' samples; surface casing to TD Preserve samples all show intervals
Surveys	Run every 1000' and on trips
Logging Program	DIL-GR-SP, FDC-CNL-GR-CALIPER-Pe-Microlog, Sonic-GR all TD to surface

Bill Barrett Corporation  
Drilling Program  
Prickly Pear Unit Federal 12-24  
Carbon County, Utah  
Page Three

**10. Anticipated Abnormal Pressures or Temperatures**

No abnormal pressures or temperatures or other hazards are anticipated.

**11. Drilling Schedule**

Spud:	Approximately June 20, 2004
Duration:	25 days drilling time
	35 days completion time

 Operator: **Bill Barrett Corporation**  
 String type: **Surface**  
 Location: **Uintah County**

**Design parameters:**

**Collapse**

Mud weight: 9.500 ppg  
 Design is based on evacuated pipe.

**Minimum design factors:**

**Collapse:**

Design factor 1.125

**Burst:**

Design factor 1.00

**Environment:**

H2S considered? No  
 Surface temperature: 60 °F  
 Bottom hole temperature: 74 °F  
 Temperature gradient: 1.40 °F/100ft  
 Minimum section length: 1,000 ft  
 Minimum Drift: 8.750 in  
 Cement top: Surface

**Burst**

Max anticipated surface pressure: 2,735 psi  
 Internal gradient: 0.220 psi/ft  
 Calculated BHP: 2,955 psi  
 Annular backup: 9.50 ppg

**Tension:**

8 Round STC: 1.60 (J)  
 8 Round LTC: 1.60 (J)  
 Butress: 1.60 (J)  
 Premium: 1.60 (J)  
 Body yield: 1.60 (B)

Tension is based on buoyed weight.  
 Neutral point: 859 ft

Non-directional string.

**Re subsequent strings:**

Next setting depth: 10,000 ft  
 Next mud weight: 9.500 ppg  
 Next setting BHP: 4,935 psi  
 Fracture mud wt: 10,000 ppg  
 Fracture depth: 10,000 ft  
 Injection pressure: 5,195 psi

Run Seq	Segment Length (ft)	Size (in)	Nominal Weight (lbs/ft)	Grade	End Finish	True Vert Depth (ft)	Measured Depth (ft)	Drift Diameter (in)	Est. Cost (USD)
1	1000	9.625	36.00	J-55	ST&C	1000	1000	8.796	0
Run Seq	Collapse Load (psi)	Collapse Strength (psi)	Collapse Design Factor	Burst Load (psi)	Burst Strength (psi)	Burst Design Factor	Tension Load (Kips)	Tension Strength (Kips)	Tension Design Factor
1	493	2020	4.094	2735	3613	1.32	31	453	14.64 J

Prepared by: Troy Schindler  
 by: Bill Barrett

Phone: (303) 312-8156  
 FAX: (303) 312-8195

Date: March 25, 2003  
 Denver, Colorado

**Remarks:**

Collapse is based on a vertical depth of 1000 ft, a mud weight of 9.5 ppg. The casing is considered to be evacuated for collapse purposes. Collapse strength is based on the Westcott, Dunlop & Kernler method of biaxial correction for tension.

In addition, burst strength is biaxially adjusted for tension.

## **1. Existing Roads**

To reach the Bill Barrett Corporation well, Prickly Pear Unit Federal 12-24 location, in Section 24-T12S-R14E:

Beginning at the intersection of the bridge over the Duchesne River and US Highway 40 in the town of Myton, Utah travel southwesterly for approximately 1.8 miles to coinciding Utah State Highways 53 and 126. Turn left and travel southerly, then southwesterly, then southerly on Highways 53 and 126 for approximately 1.7 miles to the dedicated Utah State Highway 53. Turn left and travel Highway 53 southwesterly for approximately 2.7 miles to Pleasant Valley, then travel for approximately 6.0 miles to Wells Draw Canyon. Continue travel for approximately 15 miles in Wells Draw Canyon on Highway 53 and then travel in Gate Canyon on Highway 53 for approximately 6.3 miles to an intersection with an existing resource road. Turn right at Gates Canyon and travel west approximately 4.5 miles, continuing on Harmon Canyon Road traveling southwest for approximately 3 miles and then following Harman Canyon Road as it turns back east approximately another 3 miles to an existing jeep trail. Turn right onto this jeep trail and traveling south, then southeasterly and then again south for approximately 1.5 miles to the staked proposed access road heading due north. Continue travel on staked access for approximately 4/10ths of a mile to the proposed location.

The entire 1.5 miles of the existing jeep trail access road will be upgraded in order to accommodate heavy truck traffic during the drilling and completion operations and 2/10ths of a mile of this road will be rerouted. Bill Barrett Corporation, as operator, or its contractors or subcontractors, will secure material from private sources to facilitate these road improvements. This existing to-be-improved road will be maintained in the same or better condition as existed prior to the commencement of operations and said maintenance will continue until final abandonment and reclamation of said well location.

Please see the attached Topo A map for additional details.

## **2. Planned access road**

Approximately 3250 feet of new access road will be required.  
±3250 feet, on lease, Section 24-T12S-R14E, BLM  
approximately ±1050 feet in the SWNE for the rerouted portion and ±2200 in the SW/4 of Section 24 for new access to the location

Details of the construction are as follows;

Length- 3,250 ft (approx)

Width- 32 ft (approx)

Grade- 10% or less

Please see the attached Topo B map for additional details.

Bill Barrett Corporation  
Surface Use Plan  
Prickly Pear Unit Federal 12-24  
Carbon County, Utah  
Page Two

No right of way will be required. All new construction will be conducted within the Prickly Pear Federal Unit.

All travel will be confined to existing road right of ways. Access roads and surface disturbing activities will conform to standards outlined in the USGS publication (1978) Surface Operation Standards for Oil and Gas Development.

### **3. Location of existing wells.**

There are no producing wells, water wells or abandoned or temporarily abandoned wells within a one mile radius of the location site.

### **4. Location of Tank Batteries, Production Facilities and Production Gathering and Service Lines**

The proposed location of production facilities on the well pad is shown on the well site layout drawing included herein. All production facilities are to be contained within the proposed location site. Production facilities consisting of one oil tank and one water tank, one gas separator and a meter will be placed on cut portions of the pad and be located so as to maintain minimum distances between equipment and tanks for safety purposes. Facilities will be located a minimum of 25' from the tow of the back cut.

All permanent (on site for six months or longer) structures constructed or installed will be painted a desert brown color. All facilities will be painted within six months of installation. Facilities required to comply with O.S.H.A. (Occupational Safety and Health Act) will be excluded. The required paint color is desert brown (Munsell standard color #10 YR 6/3).

A dike will be constructed around the tank (s). The dike will be constructed of compacted subsoil, be impervious, and hold 1.5 times the capacity of the largest tank.

Bill Barrett Corporation  
Surface Use Program  
Prickly Pear Unit Federal 12-24  
Carbon County, Utah  
Page Three

An 8 or 10-inch steel gas line will be installed cross-country to the south through Section 24 covering 7,390' as the proposed pipeline is laid out on Topo C. There is also depicted on Topo C an alternate proposed pipeline covering 13,890' and following the access and improved jeep trail. Both lines go north and tie into an existing gas line that runs along the south side of the main road. (Please refer to Topo C of the plat package.)

All site security guidelines identified in 43 CFR 3126.7 regulation will be adhered to. All off-lease storage, off-lease measurement, or commingling on lease or off lease will have prior written approval from the authorized officer.

If a gas meter run is constructed, it will be located within approximately 100 feet of the wellhead. The gas line will be buried, or anchored down from the wellhead to the meter. Meter runs will be housed and/or fenced.

The gas meter will be calibrated and the tank strapped in place prior to any deliveries. Tests for the meter accuracy will be conducted monthly for the first three months on new meter installations and at least quarterly thereafter. The authorized officer will be provided with a date and time for the initial meter calibration and all future meter proving schedules. A copy of the meter calibration report will be submitted to the Moab field office. All measurement facilities will conform to API and AGA standards for gas and liquid hydrocarbon measurement.

#### **5. Location and Type of Water Supply**

Bill Barrett Corporation will utilize an existing water well located on BLM lands in the SW/4 SE/4 of Section 13-T12S-R14E. Bill Barrett Corporation has been granted this authorization by the State of Utah Application Number 90-1826 (T74077) on August 20, 2002.

#### **6. Source of Construction Materials**

All construction material for this location site and access road shall be borrow material accumulated during construction of the location site and access road. Additional gravel or pit lining material will be obtained from private sources.

## **7. Methods for Handling Waste Disposal**

### **A) Pit construction and liners:**

The reserve pit will be approximately 8 feet deep and at least one-half of the depth shall be below the surface of the existing ground.

The reserve pit will be lined with a 16 mil pit liner with felt underneath where necessary. The pit liner will be torn and perforated after the pit dries and before backfilling the reserve pit. The reserve pit will be reasonably free of hydrocarbons before the pit is backfilled.

### **B) Produced Fluids:**

Produced water will be confined to the reserve pit, or if deemed necessary, a storage tank for a period not to exceed 90 days after initial production. Thereafter, produced water will be trucked to R & I Disposal, a State approved disposal facility.

### **C) Garbage:**

A trash cage, fabricated from expanded metal, will be used to hold trash on location and will be removed to an authorized landfill location.

### **D) A portable chemical toilet will be supplied for human waste.**

### **E) Site clean-up:**

After the rig is moved out, the area around the wellsite will be cleaned and all refuse removed.

## **8. Ancillary Facilities**

There are no ancillary facilities planned for at this time and none are foreseen in the future.

## 9. Wellsite Layout

Location dimensions are as follows:

<u>A) PAD LENGTH</u>	<u>325 FT</u>
<u>B) PAD WIDTH</u>	<u>150 FT</u>
<u>C) PIT DEPTH</u>	<u>8 FT</u>
<u>D) PIT LENGTH</u>	<u>100 FT</u>
<u>E) PIT WIDTH</u>	<u>75 FT</u>
<u>F) MAX CUT</u>	<u>20.8 FT</u>
<u>G) MAX FILL</u>	<u>10.5 FT</u>
<u>H) TOTAL CUT YARDS</u>	<u>9,530 CU YDS</u>
<u>I) PIT LOCATION</u>	<u>WEST SIDE</u>
<u>J) TOP SOIL LOCATION</u>	<u>NORTH END &amp; SOUTH END</u>
<u>K) ACCESS ROAD LOCATION</u>	<u>FROM THE SOUTH</u>
<u>L) FLARE PIT</u>	<u>WEST SIDE</u>

Please see the attached location diagram for additional details.

Prior to commencement of drilling operations, the reserve pit will be fenced on three (3) sides with four strand barbed wire held in place by metal side posts and wooden corner "H" braces in order to protect livestock and wildlife.

- A) Corner posts shall be braced in such a manner as to keep the fence tight at all times.
- B) Standard steel, wood or pipe posts shall be used between the corner braces. Distance between any two posts shall be no greater than 16 ft.
- C) All wire shall be stretched, by using a stretching device, before it is attached to the corner posts.
- D) The fourth (4<sup>th</sup>) side of the reserve pit will be fenced immediately upon removal of the drilling rig and the fencing will be maintained until the pit is backfilled.
- E) Any hydrocarbons on the pit will be removed immediately

## **10. Plans for Restoration of the Surface**

Prior to the construction of the location, the top 6 inches of soil material will be stripped and stockpiled. This will amount to 1,090 cubic yards of material. Placement of the topsoil is noted on the attached location plat. When all drilling and completion activities have been completed, the unused portion of the location (the area outside the deadmen) will be recontoured and the topsoil spread over the area.

The dirt contractor will be provided with an approved copy of the surface use plan prior to construction activities.

Any drainage rerouted during the construction activities shall be restored to its original line of flow or as near as possible.

All disturbed areas will be recontoured to the approximate natural contours. Prior to backfilling the pit, the fences around the reserve pit will be removed. The pit liner will be cut off at the water or mud line and disposed of at an approved landfill site. The liner will also be torn and perforated after the pit dries and before backfilling of the reserve pit.

The reserve pit will be reclaimed within one (1) year of well completion. If the reserve pit has not dried sufficiently to allow backfilling, an extension on the time requirement for backfilling the pit will be requested. Once reclamation activities have begun, they shall be completed within 30 days.

After the reserve pit has been reclaimed, no depressions in the soil covering the reserve pit will be allowed. The objective is to keep seasonal rainfall and runoff from seeping into the soil used to cover the reserve pit. Diversion ditches and water bars will be used to divert runoff as needed.

When restoration activities have been completed, the location site and new access road cuts and shoulders shall be reseeded as recommended by the BLM. Prior to reseeded, all disturbed areas, including the old access road, will be scarified and left with a rough surface. Seeding will take place either during the fall (prior to ground frost) or spring (after frost leaves the ground) months.

Seed will be broadcast or drilled at the time specified by the BLM. If broadcast, a harrow or some other implement will be dragged over the seeded area to assure seed coverage and the seed mixture will be proportionately larger (double the pounds per acre).

Bill Barrett Corporation  
Surface Use Plan  
Prickly Pear Unit Federal 12-24  
Carbon County, Utah  
Page Seven

At such time the well is plugged and abandoned, the operator will submit a surface reclamation plan to the Surface Management Agency for prescribed seed mixture and reseeding requirements.

#### **11. Surface Ownership:**

State of Utah; School and Institutional Trust Lands Administration

#### **12. Other Information**

##### **A) Vegetation:**

The trees in the area are cedar and pinion. The vegetation coverage is intermittent. The majority of the existing understory vegetation is made up of rabbitbrush, sage, and bitter brush. Also found on the location is prickly pear and various grasses.

##### **B) Dwellings:**

There are no occupied dwellings, or other facilities within a one mile radius of this location.

##### **C) Archaeology:**

The location has been surveyed and is being recommended for clearance. No archaeological, historical, or cultural sites near the proposed site and access road will be directly impacted. A copy of the written archaeological report dated July 9, 2003 should be in your files.

If, during operations, any archaeological or historical sites, or any objects of antiquity (subject to the Antiquities Act of June 8, 1906) are discovered, all operations which would affect such sites are to be suspended and the discovery reported promptly to the surface management agency.

##### **D) Water:**

The nearest water would be in Stone Cabin Draw approximately one and one-half miles to the south.

Bill Barrett Corporation  
Surface Use Program  
Prickly Pear Unit Federal 12-24  
Carbon County, Utah  
Page Eight

E) Chemicals:

No pesticides, herbicides or other possible hazardous chemicals shall be used without prior application.

F) Notification:

BLM, Moab, Utah: (435-259-2100)  
24 to 48 hours before construction of the location.  
Also after site construction and before the rig moves in.

H) Flare Pit:

The flare pit will be located 15 feet from the reserve pit fence and 100 feet from the bore hole on the west side of the location, immediately above point C on the location layout plat. All fluids will be removed from the pit within 48 hours of occurrence.

All lease and/or unit operations will be conducted in such a manner that full compliance is made with all applicable laws, regulations and onshore oil and gas orders. The operator is fully responsible for the actions of its contractors and subcontractors. A copy of these conditions will be furnished to the field representative to ensure compliance.

The drilling permit will be valid for a period of one year from the date of approval. After permit termination, a new application will be filed for approval for any future operations.

**B) Certification:**

I hereby certify that the statements made in this plan are, to the best of my knowledge and belief, true and correct; and that the work associated with the operations proposed herein will be performed by Bill Barrett Corporation and its contractors and subcontractors in conformity with this plan and the terms and conditions under which it is approved. This statement is subject to the provisions of 18 U.S.C. 1001 for the filing of a false statement.

Re: Prickly Pear Unit Federal 12-24 Well, 1271' FSL, 483' FWL, SW SW, Sec. 24,  
T. 12 South, R. 14 East, Carbon County, Utah

Gentlemen:

Pursuant to the provisions and requirements of Utah Code Ann. § 40-6-1 *et seq.*, Utah Administrative Code R649-3-1 *et seq.*, and the attached Conditions of Approval, approval to drill the referenced well is granted.

Appropriate information has been submitted to DOGM and administrative approval of the requested exception location is hereby granted.

This approval shall expire one year from the above date unless substantial and continuous operation is underway, or a request for extension is made prior to the expiration date. The API identification number assigned to this well is 43-007-30953.

Sincerely,

John R. Baza  
Associate Director

Bureau of Land Management, Moab District Office

Operator: Bill Barrett Corporation  
Well Name & Number Prickly Pear Unit Federal 12-24  
API Number: 43-007-30953  
Lease: UTU-77513

Location: SW SW                      Sec. 24      T. 12 South                      R. 14 East

### Conditions of Approval

1. General

Compliance with the requirements of Utah Admin. R. 649-1 *et seq.*, the Oil and Gas Conservation General Rules, and the applicable terms and provisions of the approved Application for permit to drill.

2. Notification Requirements

Notify the Division within 24 hours of spudding the well.

- Contact Carol Daniels at (801) 538-5284.

Notify the Division prior to commencing operations to plug and abandon the well.

- Contact Dan Jarvis at (801) 538-5338

3. Reporting Requirements

All required reports, forms and submittals will be promptly filed with the Division, including but not limited to the Entity Action Form (Form 6), Report of Water Encountered During Drilling (Form 7), Weekly Progress Reports for drilling and completion operations, and Sundry Notices and Reports on Wells requesting approval of change of plans or other operational actions.

4. State approval of this well does not supersede the required federal approval, which must be obtained prior to drilling.

5. This proposed well is located in an area for which drilling units (well spacing patterns) have not been established through an order of the Board of Oil, Gas and Mining (the "Board"). In order to avoid the possibility of waste or injury to correlative rights, the operator is requested, once the well has been drilled, completed, and has produced, to analyze geological and engineering data generated therefrom, as well as any similar data from surrounding areas if available. As soon as is practicable after completion of its analysis, and if the analysis suggests an area larger than the quarter-quarter section upon which the well is located is being drained, the operator is requested to seek an appropriate order from the Board establishing drilling and spacing units in conformance with such analysis by filing a Request for Agency Action with the Board.

CONDITIONS OF APPROVAL ATTACHED  
RECEIVED

AUG 12 2004

DIV. OF OIL, GAS & MINING

Bill Barrett Corporation  
Prickly Pear Unit Federal 12-24  
Lease UTU-77513  
Prickly Pear Unit  
SW/SW Sec. 24, T12S, R14E  
Carbon County, Utah

**A COMPLETE COPY OF THIS PERMIT SHALL BE KEPT ON LOCATION from the beginning of site construction through well completion, and shall be available to contractors to ensure compliance.**

CONDITIONS OF APPROVAL

Approval of this application does not warrant or certify that the applicant holds legal or equitable title to those rights in the subject lease which would entitle the applicant to conduct operations thereon.

Be advised that Bill Barrett Corporation is considered to be the operator of the above well and is responsible under the terms and conditions of the lease for the operations conducted on the leased lands.

Bond coverage for this well is provided by UT1262 (Principal – Bill Barrett Corporation) via surety consent as provided for in 43 CFR 3104.2.

This office will hold the aforementioned operator and bond liable until the provisions of 43 CFR 3106.7-2 continuing responsibility are met.

This permit will be valid for a period of one year from the date of approval. After permit termination, a new application must be filed for approval.

All lease operations will be conducted in full compliance with applicable regulations (43 CFR 3100), Onshore Oil and Gas Orders, lease terms, notices to lessees, and the approved plan of operations. The operator is fully responsible for the actions of his subcontractors.

## A. DRILLING PROGRAM

1. The proposed 3M BOP system (revised from the original proposal) is adequate for anticipated conditions. Installation, testing and operation of the system shall be in conformance with Onshore Oil and Gas Order No. 2.
2. Concurrent approval from the State of Utah, Division of Oil, Gas & Mining (DOGM) is required before conducting any surface disturbing activities.
3. Locally, the Green River Formation is known to contain oil, gas, oil shale and tar sand deposits. However, the lateral occurrence, distribution and grade of the oil shale and tar sand deposits are not well defined. The operator shall pay particular attention to this section, and shall attempt to identify and describe any of these resources that may be penetrated. The operator shall note the presence of these resources in drilling reports and Well Completion Report. All oil, gas, oil shale and tar sand resources shall be isolated behind cement.
4. In order to isolate and protect known hydrocarbon resources, production casing shall be cemented into place such that the top-of-cement is:
  - 1) not less than 300 feet above the top of the Wasatch Formation, and
  - 2) not less than 100 feet above the top of the highest hydrocarbon bearing zone that is not already isolated behind the surface casing.
5. A cement bond log (CBL) or other appropriate tool for determining top-of-cement, shall be run on the production casing string.
6. If logging reveals that the cementing objectives were not met, remedial cementing will be required.

This well site is on State of Utah land. Should any of the following surface use conditions of approval be in conflict with requirements prescribed by the State, the State requirements shall be followed.

Prickly Pear 12-24

**B. SURFACE USE**

1. The following appendices are attached for your reference. They are to be followed as conditions of approval:

SM-A, Seed Mixture for Berms, Topsoil Piles, Pad Margins

SM-B, Seed Mixture for Final Reclamation (buried pipelines, abandoned pads, roads, etc.)

TMC1, Browse Hand Planting Tubeling Mixtures

Lease Stipulations, see attached Table 2.3 from EA for West Tavaputs Plateau Drilling Program.

Applicant-committed environmental protection measures, see attached Appendix B

2. An archaeologist shall be present during construction and earth disturbing activities to monitor site 42Cb1927. The access route shall avoid site 42Cb1909.
3. The mud pit shall be lined with an impermeable liner. Fill from the pit shall be stockpiled within a drainage control berm along the edge of the pit and adjacent edge of the well pad.
4. Within six months of installation, surface structures shall be painted in the following flat, earth tone color: Olive Black (5WA20-6). This Fuller O'Brien color is for reference only. Any brand of paint may be used provided the colors match. Any facilities that must be painted to comply with OSHA standards are exempt.
5. In areas where the soil surface shows evidence of biological soil crusts, the top uppermost (1/4-inch) of undisturbed biological soils from adjacent an undisturbed area shall be randomly collected from small areas (approximately 12-inch squares) and cast over the reclaimed site immediately following final reclamation to the facilitate re-establishment of soil crusts. Such actions would mitigate impacts to soil crusts in the long-term, although short-term impacts would remain.
6. Where appropriate use brush-hog or similar equipment to minimize impact to vegetation and enhance re-growth and revegetation potential.
7. BBC shall provide the authorized officer with an annual report of water consumed for the entire field for drilling, completion, and dust-suppression

activities. This report shall detail the amounts used and the source of the water.

8. Feather edges of disturbed area by creating a vertical transition from taller to shorter vegetation along disturbed edges. Vary width of disturbance and preserve some plant masses to create a more naturally appearing edge and thereby avoid straight, sweeping, and converging lines in the landscape.
9. Reduce overall width of surface disturbance by working with equipment on the road, and taking advantage of the access already provided by the roadway.
10. BBC shall implement an effective revegetation plan, including installation of shrubs and tubelings, thus establishing larger caliper plants early.
11. Use rocks and downed vegetation to "break up" new textures created by disturbance and exposure of soils, and to provide "planting pockets" for the establishment of new plant materials.
12. At stream crossings keep all equipment away from edge of escarpments and stream banks thereby minimizing impacts to escarpment edge, and stabilize these edges pre-construction using vegetative or mechanical methods.
13. Refer to TMC1, Browse Hand Planting Tubeling Mixtures to easily establish fast-growing shrubs in seed mix and as tubelings.
14. To minimize the chance of undesirable plant species (especially seeds) from being carried into the WTPPA, equipment would be power-washed before being brought in.
15. Heavy equipment would not mobilize or demobilize through Nine Mile Canyon on weekends or holidays.
16. Recontour all disturbed surfaces to more natural-appearing landform, similar in topography to pre-disturbance and surrounding landscape. Prepare the soils for proper revegetation and implement best management practices for revegetation and erosion control.
17. No construction/drilling activities shall occur during the time of the year November 1 through May 15 for sage-grouse winter habitat.
18. Mule deer on critical winter ranges shall be protected by seasonal restrictions on construction from November 1 through May 15 where federal permits are required.

19. Elk on high priority and critical winter ranges would be protected by seasonal restrictions on construction from November 1 through May 15.
20. The Mexican Spotted Owl Conservation Measures to avoid impacts:
  - a. Conduct annual surveys for nesting roosting habitat in areas proposed for construction activity within .5 miles of identified canyon habitat, based on the USFWS 2000, MSO habitat model.
  - b. Upon discovery of individuals or sightings of this species, halt construction/drilling activities and notify the authorized official.
21. The Operator shall contact the authorized BLM official for an onsite prior to the placement of long-term structures occupying the pad longer than 6 months and higher than 14 feet above the original natural grade.

### GENERAL CONSTRUCTION

22. Operator shall contact the Price BLM Office at least forty-eight hours prior to the anticipated start of construction and/or any surface disturbing activities. The BLM may require and schedule a preconstruction conference with the operator prior to the operator commencing construction and/or surface disturbing activities. The operator and the operator's contractor, or agents involved with construction and/or any surface disturbing activities associated with the project, shall attend this conference to review the Conditions of Approval and plan of development. The operator's inspector will be designated at the pre-drill conference, and is to be given an approved copy of all maps, permits and conditions of approval before the start of construction. The BLM will also designate a representative for the project at the preconstruction conference.
23. The operator shall designate a representative(s) who shall have the authority to act upon and to implement instructions from the BLM. The operator's representative shall be available for communication with the BLM within a reasonable time when construction or other surface disturbing activities are underway.
24. Any archaeology/cultural resource discovered by the operator, or any person working on his behalf, on public land are to be immediately reported to the Price BLM Office. The operator will suspend all operations in the immediate area of such discovery until written authorization to proceed is issued by the Price BLM Office. An evaluation of the discovery will be made by the BLM to determine

appropriate actions to prevent the loss of significant cultural or scientific values. The operator is responsible for the cost of evaluation of any site found during construction. The BLM will determine what mitigation is necessary.

Any paleontology discovered by the operator, or any person working on his behalf, on public land is to be immediately reported to the Price BLM Office. The operator will suspend all operations in the immediate area of such discovery until written authorization to proceed is issued by the Price BLM Office. An evaluation of the discovery will be made by the BLM to determine appropriate actions to prevent the loss of significant cultural or scientific values. The operator is responsible for the cost of evaluation of any site found during construction. The BLM will determine what mitigation is necessary.

25. During project construction, surface disturbance and vehicle travel shall be limited to the approved location and access routes. Any additional area needed must be approved by the Price BLM Office prior to use.
26. The operator must provide a trash cage for the collection and containment of all trash. The trash shall be disposed in an authorized landfill. The location and access roads shall be kept litter free.
27. Vegetation removal necessitated by construction shall be confined to the limits of actual construction. Removed vegetation will be stockpiled for use in reclamation or removed from the construction site at the direction of the BLM.
28. Prior to surface disturbance, topsoil is to be separately removed and segregated from other material. Topsoil depth will be decided onsite by BLM. If the topsoil is less than 6 inches, a 6-inch layer that includes the A horizon and the unconsolidated material immediately below the A horizon shall be removed and the mixture segregated and redistributed as the surface soil layer.

Generally topsoil shall be stored within the pad site or adjacent to access roads. The company in consultation with BLM shall determine stockpile locations and dimensions at the onsite. If the topsoil stockpiles will not be redistributed for a period in excess of one (1) year, the stockpiles are to be seeded with seed mixture SM-A (attached).

## **ROAD and PIPELINE CONSTRUCTION**

29. Operator shall provide an inspector under the direction of a registered professional engineer (PE) at all times during road construction. A PE shall certify (statement with PE stamp) that the road was constructed to the required Bureau of Land Management (BLM) road standards.
30. Road construction or routine maintenance activities are to be performed during periods when the soil can adequately support construction equipment. If such equipment creates ruts more than 6 inches deep, the soil is deemed too wet to adequately support construction equipment. Whenever dust plumes exceed 200 feet the company shall water the road to abate the dust
31. The operator is responsible for maintenance of all roads authorized through the lease or a right-of-way. Construction and maintenance shall comply with Class II or III Road Standards as described in BLM Manual Section 9113 and the Moab District Road Standards, except as modified by BLM. Maintenance may include but is not limited to grading, applying gravel, snow removal, ditch cleaning, headcut restoration/prevention.
32. Topsoil from access roads and pipelines are to be wind rowed along the uphill side of the road or stored in an approved manner. When the road and pipeline is rehabilitated, this soil will then be used as a top coating for the seed bed.
33. Erosion-control structures such as water bars, diversion channels, and terraces will be constructed to divert water and reduce soil erosion on the disturbed area. Road ditch turnouts shall be equipped with energy dissipators as needed to avoid erosion. Where roads interrupt overland sheet-flow and convert this runoff to channel flow, ditch turnouts shall be designed to reconvert channel flow to sheet flow. Rock energy dissipators and gravel dispersion fans may be used or any other design which would accomplish the desired reconversion of flow regime. As necessary cut banks, road drainages, and road crossings shall be armored or otherwise engineered to prevent headcutting.

#### **PAD CONSTRUCTION**

34. During the construction of the drill pad, suitable topsoil material is to be stripped and conserved in a stockpile on the pad. If stockpiles are to remain for more than a year, they shall be seeded with the seed mixture in appendix SM-A, attached.
35. Generally, drill pads are to be designed to prevent overland flow of water from entering or leaving the site. The pad is to be sloped to drain spills and water

into the reserve pit. The drill pad shall be designed to disperse diverted overland flow and to regulate flow velocity so as to prevent or minimize erosion. Well pad diversion outlets shall be equipped with rock energy and gravel-bedded dispersion fans.

36. In the event construction can't be completed prior to winter closures, measures to prevent erosion from upcoming spring snowmelt shall be taken as follows:
  - a. Loose earth and debris will be removed from drainages, and flood plains.
  - b. Earth and debris shall not be stockpiled on drainage banks.
  - c. Road drainages shall be checked to ensure there are none with uncontrolled outlets.
    1. Be sure all ditch drainages have an outlet to prevent ponding.
    2. If necessary, build temporary sediment ponds to capture runoff from unreclaimed areas.
    3. Re-route ditches as needed to avoid channeling water through loosened soil.
37. Excess material from road blading must not be plowed into drainages. Remove excess material and deposit at approved locations.

## **REHABILITATION PROCEDURES**

### **Site Preparation**

38. The entire roadbed should be obliterated and brought back to the approximate original contour. Drainage control is to be reestablished as necessary. All areas affected by road construction are to be recontoured to blend in with the existing topography. All berms are to be removed unless determined to be beneficial by BLM. In recontouring the disturbed areas, care should be taken to not disturb additional vegetation.

### **Seedbed Preparation**

39. An adequate seedbed should be prepared for all sites to be seeded. Areas to be revegetated should be chiseled or disked to a depth of at least 12 inches unless restrained by bedrock.
40. Ripping of fill materials should be completed by a bulldozer equipped with single or a twin set of ripper shanks. Ripping should be done on 4-foot centers

to a depth of 12 inches. The process should be repeated until the compacted area is loose and friable, and then shall be followed by final grading. Seedbed preparation will be considered complete when the soil surface is completely roughened and the number of rocks (if present) on the site is sufficient to cause the site to match the surrounding terrain.

41. After final grading, the stockpiled topsoil shall be spread evenly across the disturbed area.

#### Fertilization

42. Commercial fertilizer with a formula of 16-16-8 is to be applied at a rate of 200 pounds per acre to the site. The rate may be adjusted depending on soil.
43. Fertilizer is to be applied not more than 48 hours before seeding, and shall be cultivated into the upper 3 inches of soil.
44. Fertilizer is to be broadcast over the soil using hand-operated "cyclone-type" seeders or rotary broadcast equipment attached to construction or revegetation machinery as appropriate to slope. All equipment should be equipped with a metering device. Fertilizer application is to take place before the final seeding preparation treatment. Fertilizer broadcasting operations should not be conducted when wind velocities would interfere with even distribution of the material.

#### Mulching

45. When it is time to reclaim this location, the Price BLM Office will determine whether it will be necessary to use mulch in the reclamation process. The type of mulch should meet the following requirements: Wood cellulose fiber shall be natural or cooked, shall disperse readily in water, and shall be nontoxic. Mulch shall be thermally produced and air dried. The homogeneous slurry or mixture shall be capable of application with power spray equipment. A colored dye that is noninjurious to plant growth may be used when specified. Wood cellulose fiber is to be packaged in new, labeled containers. A minimum application of 1500 pounds per acre shall be applied. A suitable tackifier shall be applied with the mulch at a rate of 60 to 80 pounds per acre.

An alternative method of mulching on small sites would be the application of straw or hay mulch at a rate of 2000 pounds per acre. Hay or straw shall be certified weed free. Following the application of straw or hay, crimping shall occur to ensure retention.

## Reseeding

46. All disturbed areas are to be seeded with the seed mixture required by the BLM. The seed mixture(s) shall be planted in the fall of the year (Sept-Nov), in the amounts specified in pounds of pure live seed (PLS)/acre. If fall seeding is not feasible, the seed mixture(s) shall be planted April 30-May 31. There shall be no noxious weed seed in the seed mixture. Seed will be tested and the viability testing of seed shall be done in accordance with State law(s) and within 12 months prior to planting. Commercial seed will be either certified or registered seed. The seed mixture container shall be tagged in accordance with State law(s) and available for inspection by the BLM. Seed is to be planted using a drill equipped with a depth regulator to ensure proper depth of planting where drilling is possible. The seed mixture shall be evenly and uniformly planted over the disturbed area. (Smaller/heavier seeds tend to drop to the bottom of the drill and are planted first. Appropriate measures should be taken to ensure this does not occur.) Where drilling is not possible, seed is to be broadcast and the area raked or chained to cover the seed. Woody species with seeds that are too large for the drill will be broadcast. When broadcasting the seed, the pounds per acre noted below are to be increased by 50 percent.

Reseeding may be required if a satisfactory stand is not established to the surface rights owner's specifications. Evaluation of the seeding's success will not be made before completion of the second growing season after the vegetation becomes established. The Price BLM Office is to be notified a minimum of seven days before seeding a project.

47. The disturbed areas for the road and pipeline must be seeded in the fall of the year, immediately after the topsoil is replaced. The prescribed seed mixture is attached as appendix SM-B.

## General

48. Prior to the use of insecticides, herbicides, fungicides, rodenticides and other similar substances, the operator must obtain from BLM, approval of a written plan. The plan must describe the type and quantity of material to be used, the pest to be controlled, the method of application, the location for storage and disposal of containers, and other information that BLM may require. A pesticide may be used only in accordance with its registered uses and within other agency limitations. Pesticides must not be permanently stored on public lands.

**Seed Mix A'**  
Temporary Disturbance  
(for berms, topsoil piles, pad margins)

**Forbes Lbs**

Yellow Sweetclover	2.0 lbs/acre

**Total** 16.0 lbs/acre

1 Yellow Sweetclover is planted as a nurse crop to provide solar protection, soil binding and nitrogen fixing. It will normally be crowded out in 2 to 3 years.

**APPENDIX B:**  
**APPLICANT-COMMITTED ENVIRONMENTAL PROTECTION MEASURES**

---

---

## **1.0 INTRODUCTION**

Appendix B is part of BBC's Proposed Action for the WTPDP as described in Chapter 2.0, and BBC will comply with the standards, procedures, and requirements contained in Appendix B when implementing the Alternatives unless otherwise provided for by the BLM Authorized Officer (AO). Appendix B describes standard practices utilized to mitigate adverse effects caused by surface-disturbing activities.

---

## 2.0 STANDARD PRACTICES

The following BMPs/Applicant-Committed Protection Measures (ACEPM) will be applied to all federal lands within the WTPPA by BBC to minimize impacts to the environment. Exception, modification, or waiver of a mitigation requirement may be granted if a thorough analysis by BLM determines that the resource(s) for which the measure was developed will not be impacted by the project activity. Further site-specific mitigation measures may be identified during the application for permit to drill (APD) and/or right-of-way (ROW) application review processes.

### 2.1 PRECONSTRUCTION PLANNING AND DESIGN MEASURES

1. BBC and/or their contractors and subcontractors will conduct all phases of project implementation, including well location, road and pipeline construction, drilling and completion operations, maintenance, reclamation, and abandonment in full compliance with all applicable federal, state, and local laws and regulations and within the guidelines specified in approved APDs and ROW permits. BBC will be held fully accountable for their contractor's and subcontractor's compliance with the requirements of the approved permit and/or plan.
2. Implementation of site-specific activities/actions will be contingent on BLM determining that the activity/action complies with the following plans:
  - Surface Use Plan and/or Plan of Development; and
  - Site-specific APD plans/reports (e.g., road and wellpad design plans, cultural clearance, special status plant species clearance, etc.).

The above plans may be prepared by the Companies for the project area or submitted incrementally with each APD, ROW application, or Sundry Notice (SN).

### 2.2 ROADS

1. BBC will construct roads on private surface in a safe and prudent manner to the specifications of landowners.
  2. Roads on federal surface will be constructed as described in BLM Manual 9113. Where necessary, running surfaces of the roads will be graveled if the base does not already contain sufficient aggregate.
  3. Existing roads will be used when the alignment is acceptable for the proposed use. Generally, roads will be required to follow natural contours; provide visual screening by constructing curves, etc.; and be reclaimed to BLM standards.
  4. To control or reduce sediment from roads, guidance involving proper road placement and buffer strips to stream channels, graveling, proper drainage, seasonal closure, and in some cases, redesign or closure of old roads will be developed when necessary. Construction may also be prohibited during periods when soil material is saturated, frozen, or when watershed damage is likely to occur.
  5. Available topsoil will be stripped from all road corridors prior to commencement of construction activities and will be redistributed and reseeded on backslope areas of the borrow ditch after completion of road construction activities. Borrow ditches will be reseeded in the first appropriate season after initial disturbance.
-

- 
6. On newly constructed roads and permanent roads, the placement of topsoil, seeding, and stabilization will be required on all cut and fill slopes unless conditions prohibit this (e.g., rock). No unnecessary side-casting of material (e.g., maintenance) on steep slopes will be allowed.
  7. Reclamation of abandoned roads will include requirements for reshaping, recontouring, resurfacing with topsoil, installation of water bars, and seeding on the contour. Road beds, wellpads, and other compacted areas will be ripped to a depth of 1.0 foot on 1.5 feet centers to reduce compaction prior to spreading the topsoil across the disturbed area. Stripped vegetation will be spread over the disturbance for nutrient recycling, where practical. Fertilization or fencing of these disturbances will not normally be required. Additional erosion control measures (e.g., fiber matting) and road barriers to discourage travel may be required. Graveled roads, wellpads, and other sites will be stripped of usable gravel and hauled to new construction sites prior to ripping as deemed necessary by the AO. The removal of structures such as bridges, culverts, cattleguards, and signs will usually be required.
  8. Main artery roads, regardless of the primary user, will be crowned, ditched, drained, and, if deemed appropriate by the AO, surfaced with gravel.
  9. Unnecessary topographic alterations will be mitigated by avoiding, where possible, steep slopes, rugged topography, and perennial and ephemeral/intermittent drainages, and by minimizing the area disturbed.
  10. Upon completion of construction and/or production activities, the Companies will restore, to the extent practicable, the topography to near pre-existing contours at well sites, access roads, pipelines, and other facility sites.
  11. Existing roads will be used to the maximum extent possible and upgraded as necessary.
  12. BBC will comply with existing federal, state, and county requirements and restrictions to protect road networks and the traveling public.
  13. Special arrangements will be made with the Utah Department of Transportation to transport oversize loads to the project area. Otherwise, load limits will be observed at all times to prevent damage to existing road surfaces.
  14. All development activities along approved ROWs will be restricted to areas authorized in the approved ROW.
  15. Roads and pipelines will be located adjacent to existing linear facilities wherever practical.
  16. BBC and/or their contractors will post appropriate warning signs and require project vehicles to adhere to appropriate speed limits on project-required roads, as deemed necessary by the AO.
  16. BBC will be responsible for necessary preventative and corrective road maintenance for the duration of the project. Maintenance responsibilities may include, but are not limited to, blading, gravel surfacing, cleaning ditches and drainage facilities, dust abatement, noxious weed control, or other requirements as directed by the AO.
-

### **2.3 WELLPADS AND FACILITIES**

1. In conformance with Onshore Oil and Gas Order No. 1, BBC will prepare and submit individual comprehensive drill site design plans for BLM approval. These plans will show the drill location layout over the existing topography; dimensions of the location; volumes and cross sections of cut and fill; location and dimensions of reserve pits; existing drainage patterns; and access road egress and ingress. Plans will be submitted and approved prior to initiation of construction.
2. No surface disturbance is recommended on slopes in excess of 25% unless erosion controls can be ensured and adequate revegetation is expected. Engineering proposals and revegetation and restoration plans will be required in these areas.
3. Reserve pits will be constructed to ensure protection of surface and ground water. The review to determine the need for installation of lining material will be done on a case-by-case basis and consider soil permeability, water quality, and depth to ground water.
4. Reserve pit liners will have a mullen burst strength that is equal to or exceeds 300 pounds, a puncture strength that is equal to or exceeds 160 pounds, and grab tensile strengths that are equal to or exceed 150 pounds. There will be verified test results conducted according to ASTM test standards. The liner will be totally resistant to deterioration by hydrocarbons.
5. Produced water from oil and gas operations will be disposed of in accordance with the requirements of Onshore Oil and Gas Order #7.
6. Pits will be fenced as specified in individual authorizations. Any pit containing harmful fluids will be maintained in a manner that will prevent migratory bird mortality.
7. Disturbances will be managed/reclaimed for zero runoff from the wellpad or other facility until the area is stabilized. All excavations and pits will be closed by backfilling and contouring to conform to surrounding terrain. On wellpads and other facilities, the surface use plan will include objectives for successful reclamation including soil stabilization, plant community composition, and desired vegetation density and diversity.
8. On producing wells, BBC will reduce slopes to original contours (not to exceed 3:1 slopes). Areas not used for production purposes will be backfilled and blended into the surrounding terrain, reseeded, and erosion control measures installed. Erosion control measures will be required after slope reduction. Mulching, erosion control measures, and fertilization may be required to achieve acceptable stabilization.
9. Abandoned sites will be satisfactorily rehabilitated in accordance with the approved APD.

### **2.4 PIPELINES**

1. Pipeline construction methods and practices will be completed in such a manner so as to obtain good reclamation and the re-establishment of the native plant community.
  2. On ditches exceeding 24 inches in width, 6 to 12 inches of surface soil will be salvaged on the entire right-of-way, where practicable. When pipelines are buried, there will be at least 30 inches of backfill on top of the pipe. Backfill will not extend above the original ground level after the fill has settled. Guides for construction and water bar placement found in "Surface Operating Standards for Oil and
-

---

Gas Exploration and Development" (BLM and USFS 1989) will be followed. Bladed surface materials will be re-spread upon the cleared route once construction is completed. Disturbed areas that have been reclaimed will be fenced when the route is near livestock watering areas at the discretion of the AO.

3. Pipeline ROWs will be located to minimize soil disturbance to the greatest extent practicable. Mitigation will include locating pipeline ROWs adjacent to access roads to minimize ROW disturbance widths, or routing pipeline ROWs directly to minimize disturbance lengths.
4. Existing crowned and ditched roads will be used for access where possible to minimize surface disturbances. Clearing of pipeline ROWs will be accomplished with the least degree of disturbance to topsoil. Where topsoil removal is necessary, it will be stockpiled (windrowed) and re-spread over the disturbed area after construction and backfilling are completed. Vegetation removed from the ROW will also be re-spread to provide protection, nutrient recycling, and a seed source.
5. Temporary disturbances which do not require major excavation (e.g., small pipelines) may be stripped of vegetation to ground level using mechanical treatment, leaving topsoil intact and root masses relatively undisturbed.
6. To promote soil stability, backfill over the trench will be compacted so as not to extend above the original ground level after the fill has settled. Wheel or other methods of compacting the pipeline trench backfill will occur at two levels to reduce trench settling and water channeling--once after 3 feet of fill has been replaced and once within 6-12 inches of the surface. Water bars, mulching, and terracing will be installed, as needed, to minimize erosion. Instream protection structures (e.g., drop structures) in drainages crossed by a pipeline will be installed at the discretion of the AO to prevent erosion.
7. BBC will adhere to the following procedures regarding the installation of pipelines during periods when the earth is frozen.
  - The BLM Price Field Office will be contacted at least 10 days prior to anticipated start of project. The project will not proceed until such time as authorization from BLM has been received by the Companies.
  - A BLM representative will be on the ground at the beginning of construction.
  - Snow, if present, will be removed utilizing a motor grader.
  - Vegetation will be scalped and windrowed to one side of the right-of-way.
  - A wheel trencher will be used to remove approximately 6-8 inches of topsoil from the top of the pipeline ditch and windrow it to one side.
  - A trench approximately 4 feet deep will be dug using a wheel trencher and the soil will be stockpiled to one side, making sure the top soil or spoil do not get mixed together.
  - The pipeline will be installed, the trench backfilled, and the spoil compacted in the trench.
  - Stockpiled topsoil will be placed in the trench and compacted.
  - Scalped vegetation back will be placed back on right-of-way using a motor grader.
  - The entire right-of-way will be reseeded as normal in the spring after the thaw.

These procedures will be incorporated in every Plan of Development where construction in frozen earth is anticipated.

---

## **2.5 AIR QUALITY**

1. BBC will comply with all applicable local, state, and federal air quality laws, statutes, regulations, standards, and implementation plans.
2. BBC will obtain all necessary air quality permits from UDAQ to construct, test, and operate facilities.
3. All internal combustion equipment will be kept in good working order.
4. The Companies will use water at construction sites, as necessary, to abate fugitive dust.
5. The Companies will not allow any open burning of garbage or refuse at well sites or other facilities.

## **2.6 VEGETATION**

1. Removal and disturbance of vegetation will be kept to a minimum through construction site management (e.g., using previously disturbed areas and existing easements, limiting equipment/materials storage yard and staging area size, etc.).
2. Wellpads and associated roads and pipelines will be located to avoid or minimize impacts in areas of high value (e.g., sensitive species habitats, wetland/riparian areas).

## **2.7 SOILS**

1. Surface-disturbing activities will be examined on a site-specific basis, evaluating the potential for soil loss and the compatibility of soil properties with project design. Stipulations and mitigating measures will be developed on a case-by-case basis to ensure soil conservation and practical management.
  2. BBC will restrict construction activities during periods when soils are saturated and excessive rutting (>4 inches with multiple passes) would occur.
  3. Salvage and subsequent replacement of topsoil will occur for surface-disturbing activities wherever specified by the AO.
  4. Before a surface-disturbing activity is undertaken, topsoil depth will be determined and the amount of topsoil to be removed, along with topsoil placement areas, will be specified in the authorization. The uniform distribution of topsoil over the area to be reclaimed will occur unless conditions warrant a varying depth. On large surface-disturbing projects topsoil will be stockpiled and seeded to reduce erosion. Where feasible, topsoil stockpiles will be designed to maximize surface area to reduce impacts to soil microorganisms. Areas used for spoil storage will be stripped of topsoil before spoil placement, and the replacement of topsoil after spoil removal will be required.
  5. BBC will avoid adverse impacts to soils by:
    - minimizing the area of disturbance;
    - avoiding construction with frozen soil materials to the extent practicable;
    - avoiding areas with high erosion potential (e.g., unstable soil, dunal areas, slopes greater than 25%, floodplains), where practicable;
    - salvaging and selectively handling topsoil from disturbed areas;
    - adequately protecting stockpiled topsoil and replacing it on the surface during reclamation;
    - leaving the soil intact (scalping only) during pipeline construction, where practicable;
-

- 
- using appropriate erosion and sedimentation control techniques including, but not limited to, diversion terraces, riprap, and matting;
  - promptly revegetating disturbed areas using adapted species;
  - applying temporary erosion control measures such as temporary vegetation cover, application of mulch, netting, or soil stabilizers; and/or
  - constructing barriers, as appropriate, to minimize wind and water erosion and sedimentation prior to vegetation establishment.
6. Appropriate erosion control and revegetation measures will be employed. Grading and landscaping will be used to minimize slopes, and water bars will be installed on disturbed slopes in areas with unstable soils where seeding alone may not adequately control erosion. Erosion control efforts will be monitored by the Companies and necessary modifications made to control erosion.
  7. Sufficient topsoil or other suitable material to facilitate revegetation will be segregated from subsoils during all construction operations requiring excavation and will be returned to the surface upon completion of operations. Soils compacted during construction will be ripped and tilled as necessary prior to reseeding. Cut and fill sections on all roads and along pipelines will be revegetated with native species.
  8. Any accidental soil contamination by spills of petroleum products or other hazardous materials will be cleaned up by the Companies and the soil disposed of or rehabilitated according to applicable rules.
  9. BBC will restrict off-road vehicle (ORV) activity by employees and contract workers to the immediate area of authorized activity or existing roads and trails.

## 2.8 RECLAMATION

1. BBC's reclamation goals will emphasize: 1) protection of existing native vegetation; 2) minimal disturbance of the existing environment; 3) soil stabilization through establishment of ground cover; and 4) establishment of native vegetation consistent with land use planning.
  2. All reclamation will be accomplished as soon as possible after the disturbance occurs with efforts continuing until a satisfactory revegetation cover is established.
  3. Seed mixtures for reclaimed areas will be site-specific, composed of native species, and will include species promoting soil stability. A pre-disturbance species composition list will be developed if the site includes several different plant communities. Livestock palatability and wildlife habitat needs will be given consideration during seed mix formulation. BLM Manual 1745, *Introduction, Transplant, Augmentation, and Reestablishment of Fish, Wildlife, and Plants*, and Executive Order No. 11987, *Exotic Organisms*, will be used as guidance.
  4. Interseeding, secondary seeding, or staggered seeding may be used to accomplish revegetation objectives. During rehabilitation of areas in important wildlife habitat, provision will be made for the establishment of native browse and forb species. Follow-up seeding or corrective erosion control measures will occur on areas where initial reclamation efforts are unsuccessful.
  5. Any mulch used by BBC will be weed free and free from mold, fungi, or noxious weed seeds. Mulch may include native hay, small grain straw, wood fiber, live mulch, cotton, jute, synthetic netting, and rock. Straw mulch will contain fibers long enough to facilitate crimping and provide the greatest cover.
-

6. BBC will be responsible for the control of all noxious weed infestations on disturbed surfaces. Aerial application of chemicals will be prohibited within 0.25 mile of special status plant locations, and hand application will be prohibited within 500 feet. Herbicide application will be monitored by the AO.
7. Recontouring and seedbed preparation will occur immediately prior to reseeding on the unused portion of wellpads, road ROWs, and entire pipeline ROWs outside of road ROWs. In the event of uneconomical wells, BBC will initiate reclamation of the entire wellpads, access road, and adjacent disturbed habitat as soon as possible. BBC assumes the responsibility to see that their exploration, development, production, and construction operations are conducted in a manner which results in the proper reclamation of disturbed lands. BBC will monitor reclamation to determine and ensure successful establishment of vegetation. No consent to termination of any bond will be given by the AO until all the terms and conditions of the approved permit(s) have been met.
8. Proper erosion and sediment control structures and techniques will be incorporated by the Companies into the design of wellpads, roads, pipelines, and other facilities. Revegetation using a BLM-approved, locally adapted seed mixture containing native grasses, forbs, and shrubs will begin in the first appropriate season following disturbance. Vegetation removed will be replaced with plants of equal forage value and growth form using procedures that include:
  - fall reseeding (September 15 to freeze-up), where feasible;
  - spring reseeding (April 30 - May 31) if fall seeding is not feasible;
  - deep ripping of compacted soils prior to reseeding;
  - surface pitting/roughening prior to reseeding;
  - utilization of native cool season grasses, forbs, and shrubs in the seed mix;
  - interseeding shrubs into an established stand of grasses and forbs at least one year after seeding;
  - appropriate, approved weed control techniques;
  - broadcast or drill seeding, depending on site conditions; and
  - fencing of certain sensitive reclamation sites (e.g., riparian areas, steep slopes, and areas within 0.5 mile of livestock watering facilities) as determined necessary through monitoring.
9. BBC will monitor noxious weed occurrence on the project area and implement a noxious weed control program in cooperation with BLM. Weed-free certification by county extension agents will be required for grain or straw used for mulching revegetated areas.

## **2.9 CANDIDATE PLANTS/SPECIAL STATUS PLANTS**

1. Herbicide applications will be kept at least 500 feet from known special status plant species populations or other distances deemed safe by the AO.
2. Wellpads and associated roads and pipelines will be located to avoid or minimize impacts to areas of high value (e.g., special status plant species habitats, wetland/riparian areas).

## **2.10 WATERSHEDS**

1. Crossings of ephemeral, intermittent, and perennial streams associated with road and utility line construction will generally be restricted until normal flows are established after spring runoff.
-

---

## 2.11 GEOLOGICAL/PALEONTOLOGICAL RESOURCES

1. Wells, pipelines, and ancillary facilities will be designed and constructed such that they will not be damaged by moderate earthquakes. Any facilities defined as critical according to the Uniform Building Code will be constructed in accordance with applicable Uniform Building Code Standards for Seismic Risk Zone 2B.
2. If paleontological resources are uncovered during surface-disturbing activities, BBC will suspend operations at the site that will further disturb such materials and immediately contact the AO, who will arrange for a determination of significance, and, if necessary, recommend a recovery or avoidance plan.

## 2.12 CULTURAL/HISTORICAL RESOURCES

1. BBC will follow the cultural resources and recovery plan for the project.
2. If cultural resources are located within frozen soils or sediments that preclude the possibility of adequately recording or evaluating the find, construction work will cease and the site will be protected for the duration of frozen soil conditions. Recordation, evaluation and recommendations concerning further management will be made to the AO following natural thaw. The AO will consult with the affected parties and construction work will resume once management of the threatened site has been finalized and the Notice to Proceed has been issued.
3. BBC will inform their employees, contractors and subcontractors about relevant federal regulations intended to protect archaeological and cultural resources. All personnel will be informed that collecting artifacts, including arrowheads, is a violation of federal law and that employees engaged in this activity may be subject to disciplinary action.

## 2.13 WATER RESOURCES

1. BBC will maintain a complete copy of the SPCC Plan at each facility if the facility is normally attended at least 8 hours per day, or at the nearest field office if the facility is not so attended (40 CFR 112.3(e)).
  2. BBC will implement and adhere to SPCC Plans in a manner such that any spill or accidental discharge of oil will be remediated. An orientation will be conducted by the Companies to ensure that project personnel are aware of the potential impacts that can result from accidental spills, as well as the appropriate recourse if a spill does occur. Where applicable and/or required by law, streams at pipeline crossings will be protected from contamination by pipeline shutoff valves or other systems capable of minimizing accidental discharge.
  3. If reserve pit leakage is detected, operations at the site will be curtailed, as directed by the BLM, until the leakage is corrected.
  4. BBC will case and cement all gas wells to protect subsurface mineral and freshwater zones. Unproductive wells and wells that have completed their intended purpose will be properly abandoned and plugged using procedures identified by BLM (federal mineral estate) and/or WOGCC (state and fee mineral estate).
-

- 
5. All water used in association with this project will be obtained from sources previously approved by the Utah State Engineer's Office.
  6. Erosion-prone or high salinity areas will be avoided where practicable. Necessary construction in these areas will be timed to avoid periods of greatest runoff.
  7. BBC will incorporate proper containment of condensate and produced water in tanks and drilling fluids in reserve pits, and will locate staging areas for storage of equipment away from drainages to prevent contaminants from entering surface waters.
  8. Prudent use of erosion control measures, including diversion terraces, riprap, matting, temporary sediment traps, and water bars will be employed by the Companies as necessary. These erosion control measures will be used as appropriate to control surface runoff generated at wellpads. The type and location of sediment control structures, including construction methods, will be described in APD and ROW plans. If necessary, BBC may treat diverted water in detention ponds prior to release to meet applicable state or federal standards.
  9. BBC will construct channel crossings by pipelines so that the pipe is buried at least 3 feet below the channel bottom.
  10. Streams/channels crossed by roads will have culverts installed at all appropriate locations as specified in the BLM Manual 9112-*Bridges and Major Culverts* and Manual 9113-*Roads*. Streams will be crossed perpendicular to flow, where possible, and all stream crossing structures will be designed to carry the 25-year discharge event or other capacities as directed by the AO.
  11. BBC will reshape disturbed channel beds to their approximate original configuration.
  12. The disposal of all hydrostatic test water will be done in conformance with BLM Onshore Oil and Gas Order No. 7. BBC will comply with state and federal regulations for water discharged into an established drainage channel. The rate of discharge will not exceed the capacity of the channel to convey the increased flow. Waters that do not meet applicable state or federal standards will be evaporated, treated, or disposed of at an approved disposal facility.
  13. BBC will prepare Storm Water Pollution Prevention Plans (SWPPPs) as required by WDEQ National Pollution Discharge Elimination System (NPDES) permit requirements on individual disturbances that exceed 5 acres in size or as required by future changes in regulations.
  14. Any disturbances to wetlands and/or waters of the U.S. will be coordinated with the COE, and 404 permits will be secured as necessary prior to disturbance.
  15. Where disturbance of wetlands, riparian areas, streams, or ephemeral/intermittent stream channels cannot be avoided, COE Section 404 permits will be obtained by BBC as required, and, in addition to applicable above-listed measures, the following measures will be applied where appropriate:
    - wetland areas will be crossed during dry conditions (i.e., late summer, fall, or dry winters);
    - streams, wetlands, and riparian areas disturbed during project construction will be restored to as near re-project conditions as practical and, if impermeable soils contributed to wetland formation, soils will be compacted to reestablish impermeability;
    - wetland topsoil will be selectively handled;
    - disturbed areas will be recontoured and BLM-approved species will be used for reclamation; and
-

- 
- reclamation activities will begin on disturbed wetlands immediately after completion of project activities.

#### **2.14 NOISE**

1. All engines required for project activities will be properly muffled and maintained in accordance with state and federal laws.

#### **2.15 WILDLIFE, FISHERIES, AND THREATENED AND ENDANGERED (T&E) SPECIES**

1. To minimize wildlife mortality due to vehicle collisions, BBC will advise project personnel regarding appropriate speed limits in the project area. Roads no longer required for operations will be reclaimed as soon as possible. Potential increases in poaching will be minimized through employee and contractor education regarding wildlife laws. If wildlife law violations are discovered, the offending employee will be subject to disciplinary action by BBC.
2. BBC will protect (e.g., fence or net) reserve, workover, and production pits potentially hazardous to prohibit wildlife access as directed by BLM.
3. BBC will utilize wildlife-proof fencing on reclaimed areas in accordance with standards specified in BLM Handbook 1741-1, *Fencing*, if it is determined that wildlife are interfering with successful reestablishment of vegetation.
4. Consultation and coordination with USFWS and UDWR will be conducted for all mitigation activities relating to raptors and T&E species and their habitats, and all permits required for movement, removal, and/or establishment of raptor nests will be obtained.
5. BBC will adhere to all survey, mitigation, and monitoring requirements identified in the Biological Assessment prepared for this project.

#### **2.16 LIVESTOCK/GRAZING MANAGEMENT**

1. BBC will reclaim nonessential areas disturbed during construction activities in the first appropriate season after well completion.
  2. Nonessential areas include portions of the wellpads not needed for production operations, the borrow ditch and outslope portions of new road ROWs, entire pipeline ROWs outside of road ROWs, and all roads and associated disturbed areas at nonproductive wells.
  3. BBC will repair or replace fences, cattleguards, gates, drift fences, and natural barriers to current BLM standards. Cattleguards will be used instead of gates for livestock control on most road ROWs. Livestock will be protected from pipeline trenches, and livestock access to existing water sources will be maintained.
  4. BBC will review livestock impacts from roads or disturbance from construction and drilling activities at least annually with livestock permittees and BLM. Appropriate measures will be taken to correct any adverse impacts, should they occur.
-

**2.17 RECREATION**

1. BBC will instruct employees, contractors, and subcontractors that camp sites on federal lands or at federal recreation sites must not be occupied for more than 14 consecutive days.
2. BBC will require that employees, contractors, and subcontractors abide by all state and federal laws and regulations regarding hunting.

**2.18 VISUAL RESOURCES**

1. Pipeline ROWs will be located within existing ROWs whenever possible, and aboveground facilities not requiring safety coloration will be painted with appropriate nonreflective standard environmental colors (Carlsbad Canyon or Desert Brown, or other specified standard environmental colors) as determined by the AO. Topographic screening, vegetation manipulation, project scheduling, and traffic control procedures may all be employed, as practicable, to further reduce visual impacts.
2. Within VRM Class II areas, BBC will utilize existing topography to screen roads, pipeline corridors, drill rigs, wells, and production facilities from view where practicable. The Companies will paint all aboveground production facilities with appropriate colors (e.g., Carlsbad Canyon or Desert Brown) to blend with adjacent terrain, except for structures that require safety coloration in accordance with OSHA requirements.

**2.19 HEALTH AND SAFETY/HAZARDOUS MATERIALS**

1. BBC will utilize BLM-approved portable sanitation facilities at drill sites; place warning signs near hazardous areas and along roadways; place dumpsters at each construction site to collect and store garbage and refuse; ensure that all refuse and garbage is transported to a State-approved sanitary landfill for disposal; and institute a Hazard Communication Program for its employees and require subcontractor programs in accordance with OSHA (29 CFR 1910.1200).
  2. In accordance with 29 CFR 1910.1200, a Material Safety Data Sheet for every chemical or hazardous material brought on-site will be kept on file BBC's field offices.
  3. Chemicals and hazardous materials will be inventoried and reported by BBC in accordance with the SARA Title III (40 CFR 335). If quantities exceeding 10,000 pounds or the threshold planning quantity are to be produced or stored, BBC will submit appropriate Section 311 and 312 forms at the required times to the State and County Emergency Management Coordinators and the local fire departments.
  4. BBC will transport and/or dispose of any hazardous wastes, as defined by the Resource Conservation and Recovery Act of 1976 (RCRA), as amended, in accordance with all applicable federal, state, and local regulations.
  5. BBC commits to the following practices regarding hazardous material containment.
    - All storage tank batteries that contain any oil, glycol, produced water, or other fluid which may constitute a hazard to public health or safety will be surrounded by a secondary means of containment for the entire contents of the largest single tank in use plus freeboard for precipitation, or to contain 110% of the capacity of the largest vessel. The appropriate containment and/or diversionary structures or equipment, including walls and floor, will contain
-

---

any oil, glycol or produced water and shall be constructed so that any discharge from a primary containment system, such as a tank or pipe, will not drain, infiltrate, or otherwise escape to ground or surface waters before cleanup is completed.

- Treaters, dehydrators and other production facilities that have the potential to leak or spill oil, glycol, produced water, or other fluid which may constitute a hazard to public health or safety, shall be placed on or within appropriate containment and/or diversionary structure to prevent spilled or leaking fluid from reaching ground or surface waters. The appropriate containment and/or diversionary structure will be sufficiently impervious to oil, glycol, produced water, or other fluid and will be installed so that any spill or leakage will not drain, infiltrate, or otherwise escape to ground or surface waters prior to completion of cleanup.
  - Notice of any spill or leakage, as defined in BLM NTL 3A, will be immediately reported to the AO by the Companies as well as to such other federal and state officials as required by law. Oral notice will be given as soon as possible, but within no more than 24 hours, and those oral notices will be confirmed in writing within 72 hours of any such occurrence.
-

Table 2.3 Lease Numbers, Oil and Gas Units, Federal ROW Requirements, and Lease Stipulations for the 12 Vertical Federal Wells Proposed by BBC.

Well Number/Location	Federal Lease Number and Stipulations	Unit Name	Federal ROW Needs
<b>Federal Wells</b>			
7-25	UTU-59970	Prickly Pear Unit	Lower Flat Iron Road

Section 2, T13S, R16E	NA	None	Peters Point Road Extension

<sup>1</sup> No occupancy or other surface disturbance will be allowed within 330 feet of the centerline or within the 100 year recurrence interval floodplain, whichever is greater, of the perennial streams, or within 660 feet of springs, whether flowing or not. This distance may be modified when specifically approved in writing by the authorized officer of the Bureau of Land Management.

<sup>2</sup> In order to minimize watershed damage, exploration drilling and other development activity will be allowed only during the period from May 1 to October 31. This limitation does not apply to maintenance and operation of producing wells. Exceptions to this limitation in any year may be specifically approved in writing by the authorized officer of the Bureau of Land Management.

<sup>3</sup> Construction of access roads and drill pads on slopes in excess of 30 percent will require special design standards to minimize watershed damage. Drilling operations and any associated construction activities on slopes in excess of 50 percent may require directional drilling to prevent damage to the watershed. Exceptions to the limitations may be specifically approved in writing by the authorized officer of the Bureau of Land Management.

<sup>4</sup> Raptor surveys will be required whenever surface disturbance and/or occupancy proposed in association with oil/gas exploration occur within a known nesting complex for raptors located in the NWNW Sec. 10, T12S, R14E. Field surveys will be conducted by the lessee/operator as determined by the authorized officer of the BLM. When surveys are required of the lessee/operator, the consultant hired must be found acceptable to the authorized officer prior to the field survey being conducted. Based on the result of the field survey, the authorized officer will determine appropriate buffer zones.

### C. REQUIRED APPROVALS, REPORTS AND NOTIFICATIONS

Required verbal notifications are summarized in Table 1, attached.

Building Location- Contact the BLM Price Field Office, Natural Resource Protection Specialist at least 48-hours prior to commencing construction of location.

Spud- The spud date will be reported to BLM 24-hours prior to spudding. Written notification in the form of a Sundry Notice (Form 3160-5) will be submitted to the Moab Field Office within 24-hours after spudding, regardless of whether spud was made with a dry hole digger or big rig.

Daily Drilling Reports- Daily drilling reports shall detail the progress and status of the well and shall be submitted to the Moab Field Office on a weekly basis.

Monthly Reports of Operations- In accordance with Onshore Oil and Gas Order No. 1, this well shall be reported on Minerals Management Service (MMS) Form 3160, "Monthly Report of Operations," starting the month in which operations commence and continuing each month until the well is physically plugged and abandoned. This report will be filed directly with MMS.

Sundry Notices- There will be no deviation from the proposed drilling and/or workover program without prior approval. "Sundry Notices and Reports on Wells" (Form 3160-5) will be filed with the Moab Field Office for approval of all changes of plans and subsequent operations in accordance with 43 CFR 3162.3-2. Safe drilling and operating practices must be observed.

Drilling Suspensions- Operations authorized by this permit shall not be suspended for more than 30 days without prior approval of the Moab Field Office. All conditions of this approval shall be applicable during any operations conducted with a replacement rig.

Undesirable Events- Spills, blowouts, fires, leaks, accidents, or any other unusual occurrences shall be immediately reported to the BLM in accordance with requirements of NTL-3A.

Cultural Resources- If cultural resources are discovered during construction, work that might disturb the resources is to stop, and the Price Field Office is to be notified.

First Production- Should the well be successfully completed for production, the Moab Field Office will be notified when the well is placed in producing status. Such notification may be made by phone, but must be followed by a sundry notice or letter not later than five business days following the date on which the well is placed into production.

A first production conference will be scheduled as soon as the productivity of the well is apparent. This conference should be coordinated through the Moab Field Office. The Moab Field Office shall be notified prior to the first sale.

Well Completion Report- Whether the well is completed as a dry hole or as a producer, "Well Completion and Recompletion Report and Log" (Form 3160-4) will be submitted to the Moab Field Office not later than thirty-days after completion of the well or after completion of operations being performed, in accordance with 43 CFR 3162.4-1. Two copies of all logs, core descriptions, core analyses, well test data, geologic summaries, sample description, and all other surveys or data obtained and compiled during the drilling, workover, and/or completion operations, will be filed with Form 3160-4. When requested, samples (cuttings and/or samples) will be submitted to the Moab Field Office.

Venting/Flaring of Gas- Gas produced from this well may not be vented/flared beyond an initial, authorized test period of 30 days or 50 MMcf, whichever first occurs, without the prior, written approval of the Moab Field Office. Should gas be vented or flared without approval beyond the authorized test period, the well may be ordered shut-in until the gas can be captured or approval to continue the venting/flaring as uneconomic is granted. In such case, compensation to the lessor (BLM) shall be required for that portion of the gas that is vented/flared without approval and which is determined to have been avoidably lost.

Produced Water- An application for approval of a permanent disposal method and location will be submitted to the Moab Field Office for approval pursuant to Onshore Oil and Gas Order No.7.

Off-Lease Measurement, Storage, Commingling- Prior approval must be obtained from the Moab Field Office for off-lease measurement, off-lease storage and/or commingling (either down-hole or at the surface).

Plugging and Abandonment- If the well is completed as a dry hole, plugging instructions must be obtained from the Moab Field Office prior to initiating plugging operations.

A "Subsequent Report of Abandonment" (Form 3160-5) will be filed with the Moab Field Office within thirty-days following completion of the well for abandonment. This report will indicate where plugs were placed and the current status of surface restoration. Upon completion of approved plugging, a regulation marker will be erected in accordance with 43 CFR 3162.6. Final abandonment will not be approved until the surface reclamation work required by the approved APD or approved abandonment notice has been completed to the satisfaction of the Price Field Office or the appropriate surface managing agency.

TABLE 1

NOTIFICATIONS

Notify Don Stephens (435-636-3608) of the BLM Price Field Office for the following:

2 days prior to commencement of dirt work, construction and reclamation;

1 day prior to spudding;

50 feet prior to reaching the surface casing setting depth;

3 hours prior to testing BOP equipment.

If the person at the above number cannot be reached, notify the Moab Field Office at 435-259-2100. If unsuccessful, contact the person listed below.

Well abandonment operations require 24 hour advance notice and prior approval. In the case of newly drilled dry holes, verbal approval can be obtained by calling the Moab Field Office at 435-259-2100. If approval is needed after work hours, you may contact the following:

Eric Jones, Petroleum Engineer      Office: 435-259-2117

12. DESCRIBE PROPOSED OR COMPLETED OPERATIONS. Clearly show all pertinent details including dates, depths, volumes, etc.

Attached to this sundry is a copy of a general completion procedure and wellbore diagram to be used in the Nine Mile Canyon area. The exact number of stages and depths will be determined after logs have been run for each well in the Nine Mile area. Upon approval, it is Bill Barrett Corporation's intention to commingle production from the Wasatch, Middle Wasatch, North Horn (part of the lower Wasatch) and Mesaverde formations.

Gas composition is similar across all formations. The pressure profile across the formations is normal and BBC does not anticipate any cross flow.

Production is considered to be from one pool. In the event that allocation by zone or interval is required, BBC would use representative sampling obtained from production logs and allocate on a percentage basis by zone or interval.

A letter and affidavit of notice is being submitted under separate cover.

**Nine Mile Canyon Generic Completion Procedure**  
Carbon Co., UT

**Generic Multi-stage Completion Procedure**

Current Well Status: New completion with intention of downhole commingling

Objective: Rigless completion. Perf and frac various sands in separate frac stages.

Procedure:

- 1) Install wellhead isolation tool. Test casing to 3500 psi for 10" and low test to 250 psi for 10".
- 2) MIRU electric line unit. RIH with 4" casing gun, perforate interval from (to be determined) with 3 jspf, 120 deg phasing. POOH.
- 3) MIRU Halliburton frac equipment. Test all frac lines to 5000 psi. **Frac Stage 1** per frac rec.

- 
- 4) RIH with 5-1/2" flow through composite frac plug and 4" casing gun. Set plug # 1 at (to be determined). Perforate 2nd interval from (to be determined) with 3 jspf, 120 deg phasing. POOH.
  - 5) Test all frac lines to 5000 psi. **Frac Stage 2** per rec.

- 
- 6) RIH with 5-1/2" flow through composite frac plug and 4" casing gun. Set plug # 2 at (to be determined). Perforate 3<sup>rd</sup> interval from (to be determined) with 3 jspf, 120 deg phasing. POOH.
  - 7) Test all frac lines to 5000 psi. **Frac Stage 3** per rec.
  - 8) Flow back frac Stages 1 through 3 24-48 hrs to cleanup.

- 
- 9) RU service unit. RU e-line and RIH with 5-1/2" composite bridge plug and set at (to be determined). Remove well head isolation tool. NU BOP's. Pressure test BOP's to 3000 psi, test hydril to 1500 psi. Run 4-3/4" drag bit with pump off bit sub with dart valve, 1 jt 2-3/8" tubing, 2-3/8" "XN" and "X" profile nipple, rest of 2-3/8" tubing. Drill out all plugs. Clean out to PBTD. Utilize foam unit if necessary to obtain sufficient returns. EOT depth to be determined.
  - 10) Strip BOP's off and NU wellhead.
  - 11) Drop ball, pump off bit and sub. Swab well in and place all intervals on production.
  - 12) RDMO service unit. Turn well to sales.

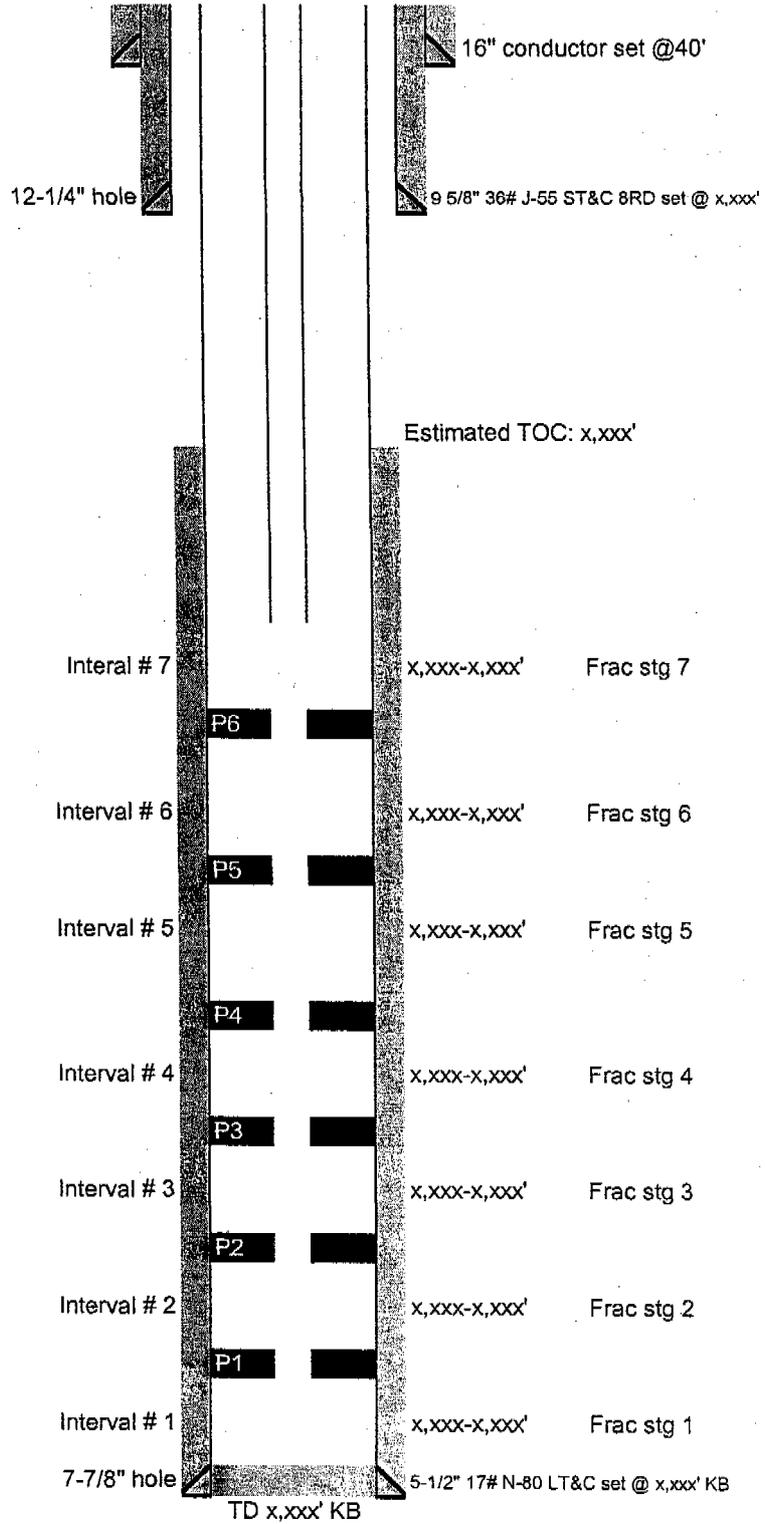

Note: There may be up to 10 frac stages.

Dear Mr. Doucet:

In accordance with our recent telephone conversations, Bill Barrett Corporation has submitted Sundry Notices to commingle production from the Wasatch, Middle Wasatch, North Horn and Mesaverde Formations in the captioned wells. We have enclosed herewith copies of the Sundry Notices together with a plat showing the leases and wells in the area, a description of the recompletion procedures and an affidavit confirming notice pursuant to the Utah OGM regulations.

Should you require additional information in this regard, please contact the undersigned at 303-312-8184 or by email at [dgundry-white@billbarrettcorp.com](mailto:dgundry-white@billbarrettcorp.com). Your earliest attention to this matter is most appreciated.

Sincerely  
Bill Barrett Corporation

**AFFIDAVIT**

Affiant on oath swears that the following statements are true:

My name is Douglas W. G. Gundry-White. I am a Petroleum Landman working for Bill Barrett Corporation (BBC). BBC has submitted Sundry Notices to commingle production from the Wasatch, Middle Wasatch, North Horn and Mesaverde Formations in the Prickly Pear Unit Federal 10-4 well, which is located in the SESE of Section 10, Township 12 South, Range 14 East, and the Prickly Pear Unit Federal 12-24 well, which is located in the SWSW of Section 24, Township 12 South, Range 14 East, Carbon County Utah. In compliance with the Utah OGM regulation R649-3-22, I have provided a copy of the Sundry Notices, by certified mail, to the owners (see listed below) of all contiguous oil and gas leases or drilling units overlying the pool.

***RE: Prickly Pear Unit Federal 10-4 and Prickly Pear Unit Federal 12-24  
Applications for Disposal***

Dear Mr. Kierst:

Bill Barrett Corporation would like to respectfully submit the two enclosed applications for water disposal as per R649-5-2, Requirements for Class II Injections Wells.

A casing test will be performed for each well as noted in the Conversion to Disposal procedures enclosed. These wells are being converted to water disposal wells as they no longer produce gas in commercial quantities.

If you require further information, please call me at 303-312-8134 or e-mail me at [tfallang@billbarrettcorp.com](mailto:tfallang@billbarrettcorp.com).

Sincerely,

***BILL BARRETT CORPORATION***

Date 3/21/2007

R649-5-2. Requirements for Class II Injection Wells Including Water Disposal, Storage and Enhanced Recovery Wells.

2. The application for an injection well shall include a properly completed UIC Form 1 and the following:

2.1. A plat showing the location of the injection well, all abandoned or active wells within a one-half mile radius of the proposed well, and the surface owner and the operator of any lands or producing leases, respectively, within a one-half mile radius of the proposed injection well. **(SEE ATTACHED MAP)**

2.2. Copies of electrical or radioactive logs, including gamma ray logs, for the proposed well run prior to the installation of casing and indicating resistivity, spontaneous potential, caliper, and porosity. **PRICKLY PEAR 12-24: COPY OF A WAVE SONIC AND A MUD LOG ARE ENCLOSED. ALL OTHER LOGS PREVIOUSLY SUBMITTED. PRICKLY PEAR 10-4: COPY OF A MUD LOG IS ENCLOSED. ALL OTHER LOGS PREVIOUSLY SUBMITTED.**

2.3. A copy of a cement bond or comparable log run for the proposed injection well after casing was set and cemented. **PRICKLY PEAR 12-24: COPY ENCLOSED. PRICKLY PEAR 10-4: COPY ALREADY ON FILE WITH THE DIVISION.**

2.4. Copies of logs already on file with the division should be referenced, but need not be refiled. **(SEE COMMENTS ON UIC FORM 1 PAGE REGARDING LOGS ALREADY SUBMITTED)**

2.5. A description of the casing or proposed casing program of the injection well and of the proposed method for testing the casing before use of the well. **(SEE WELLBORE DIAGRAM AND CONVERSION TO DISPOSAL PROCEDURES ENCLOSED)**

2.6. A statement as to the type of fluid to be used for injection, its source and estimated amounts to be injected daily. **(ENLCOSED)**

2.7. Standard laboratory analyses of: **(ENCLOSED)**

2.7.1. The fluid to be injected,

2.7.2. The fluid in the formation into which the fluid is being injected, and

2.7.3. The compatibility of the fluids.

2.8. The proposed average and maximum injection pressures. **(ENCLOSED – SEE DOCUMENT LABELED 2.6)**

2.9. Evidence and data to support a finding that the proposed injection well will not initiate fractures through the overlying strata or a confining interval that could enable the injected fluid or formation fluid to enter any fresh water strata. **(ENCLOSED – SEE DOCUMENT LABELED 2.6)**

2.10. Appropriate geological data on the injection interval with confining beds clearly labeled, **(ENCLOSED – SEE DOCUMENT LABELED 2.10 AND ASSOCIATED MAPS)**

2.10.1. Nearby Underground Sources of Drinking Water, including the geologic formation name,

2.10.2. Lithologic descriptions, thicknesses, depths, water quality, and lateral extent;

2.10.3. Information relative to geologic structure near the proposed well that may effect the conveyance and/or storage of the injected fluids.

2.11. A review of the mechanical condition of each well within a one-half mile radius of the proposed injection well to assure that no conduit exists that could enable fluids to migrate up or down the wellbore and enter improper intervals. **N/A**

2.12. An affidavit certifying that a copy of the application has been provided to all operators, owners, and surface owners within a one-half mile radius of the proposed injection well. **(ENCLOSED)**

Tracey,  
I talked with one of our managers and he said that whet you have sent and with my hand amending, dating and initialing of the original should suffice to document the correction adequately so no new UIC Form 1 is necessary.

#### Conversion to Disposal

1. Note: Water in the context of this procedure will be either clean produced water or 3% KCl water. Any water will require biocide as a precaution.
2. MIRU workover rig. Set tanks and fill with water. Using rig pump kill backside & tubing with water. ND WH & NU BOPE
3. TOO H w/production tubing. PU bit & scraper and TIH to top of fish at 7,665'. TOO H.
4. TIH w/cmt retainer to 7,650'. Establish injection and cement squeeze w/20sx. Sting out of retainer and circulate hole.
5. TOO H w/tubing. PU bit & scraper and TIH to top of retainer at 7,650'. TOO H.
6. PU RBP and Baker Hornet PKR w/bypass valve. TIH and set RBP at +/-7,640' PU and set PKR at +/-7,610'.
7. MIRU Halliburton. Pressure test surface lines to 6,000 psig. With bypass valve close pump into interval and establish rate at 500 psig surface pressure. Open bypass and displace 500 gal 7-1/2% HCl to bypass. Close bypass and pump acid into formation displacing with 50 bbl overflush. (Perfs 7,620 – 30' 3 spf 30 shots)
8. Release PKR and PU RBP. PU & set RBP at +/-7,275'. PU & set PKR at +/-7,245'.
9. With bypass valve close pump into interval and establish rate at 500 psig surface pressure. Open bypass and displace 500 gal 7-1/2% HCl to bypass. Close bypass and pump acid into formation displacing with 50 bbl overflush. (Perfs 7,258 – 66' 3 spf 24 shots)
10. Release PKR and PU RBP. PU & set RBP at +/-6,930'. PU & set PKR at +/-6,900'.
11. With bypass valve close pump into interval and establish rate at 500 psig surface pressure. Open bypass and displace 500 gal 7-1/2% HCl to bypass. Close bypass and pump acid into formation displacing with 50 bbl overflush. (Perfs 6,908 – 16' 4 spf 32 shots)
12. Release PKR and PU RBP. PU & set RBP at +/-6,810'. PU & set PKR at +/-6,780'.

13. With bypass valve close pump into interval and establish rate at 500 psig surface pressure. Open bypass and displace 500 gal 7-1/2% HCl to bypass. Close bypass and pump acid into formation displacing with 50 bbl overflush. (Perfs 6,791 – 99' 3 spf 24 shots)
14. Release PKR and PU RBP. PU & set RBP at +/-6,310'. PU & set PKR at +/-6,280'.
15. With bypass valve close pump into interval and establish rate at 500 psig surface pressure. Open bypass and displace 500 gal 7-1/2% HCl to bypass. Close bypass and pump acid into formation displacing with 50 bbl overflush. (Perfs 6,295 – 300' 4 spf 20 shots)
16. RDMO Halliburton. 
17. Release PKR and PU RBP. TOOH w/tubing, PKR & RBP.
18. Redress PKR & TIH w/WL re-entry guide, tail joint, Hornet packer, 1.78" XN profile nipple, on-off tool, 1.81" X profile nipple and tubing. Set packer at +/- 6,230'.
19. Sting out of on-off tool and circulate annulus w/inhibited water. Sting into on-off tool.
20. Land tubing and ND BOPE & NU WH.
21. Set plug in XN nipple and pressure test tubing to 3,000 psig. Hold pressure for 30 minutes.
22. Retrieve profile plug.
23. Pressure test backside annulus to 500 psig. Record pressure test on Barton chart recorder for 30 minutes at stabilizing. Send chart to Denver: Attn Chuck Maybee. Bleed off backside pressure. 
24. RDMO workover rig. Turn well over to production group.

Total Acid: 2,500 gal 7-1/2% HCl double inhibited at 150 deg F

7550	3910	7244.5	0.960

Requested Max Surface Pressure = 2000 psig

Prickly Pear 12-24-12-14			
Depth (ft)	Observed ISIP (psig)	Calculated Btm Hole (psig)	Resulting Frac Grad (psi/ft)
6295	No Treatment		
6791	3350	6349.3	0.935
6908	No Treatment		
7620	2900	6265.4	0.822
8620	2980	6787.1	0.787
9242	4390	8471.8	0.917

Requested Max Surface Pressure = 2000 psig

ISIP Data collected during initial completion treatments

Calculated Bottom Hole Pressure = ISIP + 0.4417 x De  
Resulting Frac Gradient = Calculated Btm Hole Pressu:

Requested Max Surface Pressure < 90% x ISIP  
Anticipated Avg Surface Pressure = 75% x Max Surfac

Anticipated Avg Disposal Rate = 400 bwpd / well  
Requested Maximum Disposal Rate = 2000 bwpd / wel

2.10

### 2.10.1. Nearby Underground Sources of Drinking Water, including the geologic formation name,

The literature discussing aquifers in this particular area is limited. U.S. Geological Survey, Water-Resources Investigations Report 92-4161 does indicate however, in the Uinta basin, north of Carbon County, the Douglas Creek-Renegade aquifer occurs above the Wasatch-Green River confining unit. The Wasatch-Green River confining unit lies below the Green River and above the North Horn (Glover, 1996). It would stand to reason the Wasatch formation in the West Tavaputs Plateau area, would protect any drinking water sources from contamination of higher TDS water, injected in deeper formations. In the area of the proposed injection wells, the top of the Wasatch formation occurs approximately 4750 ft above sea level and 2900 ft below ground level, and the highest injection perf occurs in the Prickly Pear #10-4-12-14 which is 2821 ft above sea level and 4757 ft below ground level.

### 2.10.2. Lithologic descriptions, thicknesses, depths, water quality, and lateral extent;

The Wasatch formation, in the West Tavaputs Plateau area, underlies the Green River formation and is indicated by a transition zone containing a series of transgressive/regressive parasequences of lacustrine origin. In addition, near-shore lacustrine and alluvial deposits occur within the sequence. The Wasatch is Tertiary in age and is marked by a succession of multi-colored shales and interbedded mudstones, siltstones and sandstones. The formation is typically 70-80% silty shale. The shales are silty to very silty, often containing mica or to a lesser extent pyrite. Shales are predominantly tan to reddish brown to brown-and commonly gradational with shaly sands being light brown to brown. Shales usually are blocky and soft, but vary in amounts of calcium carbonate cement.

In the proposed area the Wasatch is about 1000 ft thick and occurs 2800 ft below ground level and 4700 ft above sea level. The sand bodies within the Wasatch, for the most part, are limited in aerial extent and discontinuous. Only sands found in the upper part of the Wasatch, associated with the lacustrine depositional environment have greater continuity.

The middle Wasatch lies between the Wasatch and the North Horn, and is similar to the discontinuous meandering fluvial depositional environment of the Wasatch. The middle Wasatch can be identified on open-hole logs by the drop in resistivity throughout the formation. The formation is also about 1000 ft thick in the area of study.

The North Horn formation is approximately 1900 ft thick, in the area of study, and its top is 5100 ft below ground level (2625' above sea level). The North Horn is predominately a meandering fluvial depositional environment, with exception of the bottom most beds. These sand bodies are indicative of higher energy fluvial environments and are the transition from the Dark Canyon; a braided fluvial environment to the North Horn formation, a lower energy, meandering fluvial environment, which gradually decreases in energy, moving up section. These deepest beds of the North Horn are generally "cleaner" and have a greater aerial extent than beds higher in the formation. Similar to the Wasatch, most North Horn lithologies are still redbeds, but have subtle color changes in the silty shales and typically are smoother in texture. In addition, some shales are found in yellow, purple, green, and gray coloration.

The Dark Canyon formation, as indicated earlier, is a high-energy braided stream depositional environment. The sands are larger grained, higher in quarts content, more continuous and aerially most extensive. There are some indications that the lowest most deposits in the formation may be a basal conglomerate in some areas. In most areas in the West Tavaputs Plateau, there is a marked increase in sand content in the Dark Canyon, with the higher sand-content pulses occurring at the top and bottom of the formation. The formation averages about 250 ft in thickness and occurs 7000 ft below ground level, which equates to about 700 ft above sea level, in the area of study.

The Price River formation is comprised of sands and shales which seem to be of a more continuous nature, than the Wasatch and North Horn, but more lenticular than the Dark Canyon. Similarly, it seems that there is a higher percentage of sand content in the Price River formation, than the Wasatch or North Horn, but less than the Dark Canyon. The top of the Price River usually begins with an abrupt increase in gray shale and sands within the Price River contain intergranular shale. Down section carbonaceous shales can be found. The top of the formation occurs roughly 7200 ft below ground level, 400-500 ft above sea level and is about 1000 ft thick.

#### 2.10.3. Information relative to geologic structure near the proposed well that may effect the conveyance and/or storage of the injected fluids.

The proposed injection wells are structurally lower than the producing wells to the east. The anticline in the Prickly Pear Federal Unit's structural closure is centered on section 29 of T12S, R15E and its axis trends approximately N50W. The Prickly Pear #10-4 and #12-24 are situated in a saddle or syncline adjacent to the rest of Prickly Pear Federal Unit. Structural highs vary from 50 feet or more, to a few hundred feet up structure, from the synclinal axis, of the Dark Canyon and Price River.

Formation microimager logs run in the Prickly Pear #1-20-12-15, a nearby well, have indicated very few, if any, naturally occurring fractures and cross-dipole sonic logs have concurred with that conclusion, indicating very little anisotropy. The general consensus, when consulting all the cross-dipole data and a recent microseismic survey done in the Prickly Pear #1-20-12-15, is the principle horizontal stress is N50W and likewise hydraulic fracturing would and did create a fracture pattern in the shape of a 4:1 ellipse, with the long axis oriented N50W, in the Prickly Pear #1-20. That fracture pattern and microseismic events were observed in a 9-stage microseismic survey conducted last year on the aforementioned Prickly Pear well. This fracture pattern and hydraulic conveyance regime would transport and store water in an axis parallel to the productive wells to the east, and prevent interference with gas production in the Prickly Pear Unit, in addition to the structural impediments.

Gentlemen;

In accordance with State of Utah Division of Oil, Gas and Mining (UDOGM) General rules R649-5-2.12,. Please find enclosed a copy Bill Barrett Corporation Application for Injection Well (UIC Form 1) for the referenced well. This form is being mail concurrently to all other operators, owner and surface owners within a one-half mile radius of the proposed injection well in accordance with said rules.

Please feel free to contact my contact me at (303) 312-8129 if you have any questions.

Sincerely,

Bill Barrett Corporation

  
Doug Gundry-White  
Senior Landman

**Subject:** Re: Injection test for UIC Conversion

Hi Tracey,

A review of the file indicates that BBC currently only has an Approval to Convert letter but no Class II UIC Injection Permit or DOGM permission to inject temporarily (such as to charge the reservoir to get a better Step Rate Test). You say that BBC did conduct a Step Rate Test and that the charts were attached to your post. I do not find these attached.

As regards your request, DOGM would like BBC to run a normal successful witnessed MIT on the well before you do the proposed injectivity test procedure. If the MIT is successful we'll issue BBC a UIC Class II Injection Permit for the well if you wish. In any case, however, BBC can conduct the injectivity test with a verbal approval before we issue the injection permit. If your injectivity test is unsatisfactory it sounds as though it may obviate the need for a UIC Class II Permit, but that would be your decision. If you have any questions please feel free to inquire.

>>> Tracey Fallang <[tfallang@billbarrettcorp.com](mailto:tfallang@billbarrettcorp.com)> 03/27/2008 7:51 AM >>>  
Chris, here is exactly what we'd like to do on the Prickly Pear 12-24-12-14. Again, per our conversation yesterday, I'd like to confirm that the letter of temporary approval for testing that we have from you covers this test. If at all possible, I'd like to try to get whatever approvals to do this today as I'll be out of the office the rest of the week through next Tuesday. Thanks!

"BBC requests permissions to set two (2) 500 bbl frac tanks on the above referenced location to perform an extended injection test into the North Horn, Dark Canyon and Price River perforations. BBC pumped a step-rate test on the Prickly Pear 12-24-12-14 well on August 30, 2007 and determined the frac extension pressure is approximately 1,900 psi (step-rate charts attached). BBC will haul water from other producing Prickly Pear Unit North Horn/Dark Canyon/Price River wells into the frac tanks. The produced water will be filtered then injected into the Prickly Pear 12-24 well using a hot-oil truck. The maximum allowable surface injection pressure will be kept at or below 1,800 psi. The rate at this maximum pressure is expected to be between 0.5 and 1.0 BPM. In order to determine if the Prickly Pear 12-24 well is suitable for conversion to a water disposal well, BBC would like to run this injection test for up to 7 days to see if the formations will continue to take water or if they pressure up to the maximum allowable pressure after a period of time. "

**RE: Prickly Pear Unit Federal 10-4 and Prickly Pear Unit Federal 12-24  
Revisions to Disposal Applications**

Dear Mr. Kierst:

Bill Barrett Corporation would like to respectfully submit the additional information requested in our conversation on April 10<sup>th</sup>, 2007.

<b>Request by DOGM:</b>	<b>BBC Response:</b>
Revise UIC Form 1 injection interval to match conversion to disposal procedures for 12-24 application	Enclosed
Under 2.6 of R649-5-2: Provide a "firm statement" as to where water production is coming from	Addition to initial submittal enclosed.
Under 2.7 of R649-5-2: Provide water sample for the 12-24	Well will not produce. Samples provided should be representative. Brad Hill to confirm if any further action necessary.
Under 2.9 of R649-5-2: Need to perform a step-rate test	Both wells were frac treated and the tables that were provided (under 2.6) were generated from the frac data.
Revise conversion to disposal procedures as need to pressure test casing to 1000 psi.	Enclosed
Provide a written argument to show that these applications are for disposal wells and why they should not be classified as enhanced recovery (waterflood) wells.	Enclosed

If you require further information, please call me at 303-312-8134 or e-mail me at [tfallang@billbarrettcorp.com](mailto:tfallang@billbarrettcorp.com).

**APPLICATION FOR INJECTION WELL**

Name of Operator Bill Barrett Corporation	Utah Account Number N	Well Name and Number Prickly Pear Unit Federal 12-24
Address of Operator 1099 18th Street, 2300 CITY Denver STATE CO ZIP 80202	Phone Number (303) 312-8134	API Number 4300730953
Location of Well Footage : 1271' FSL, 483' FWL County : Carbon QQ, Section, Township, Range: SWSW 24 12S 14E State : UTAH		Field or Unit Name Prickly Pear Lease Designation and Number UTU-77513

Is this application for expansion of an existing project? Yes  No

Will the proposed well be used for:

Enhanced Recovery?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Disposal?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>
Storage?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>

Is this application for a new well to be drilled? Yes  No

If this application is for an existing well, has a casing test been performed? Yes  No   
Date of test: \_\_\_\_\_

Proposed injection interval: from 6,295 to 7,630

Proposed maximum injection: rate 2,000 bpd pressure 2,000 psig

Proposed injection zone contains oil , gas , and / or fresh water  within 1/2 mile of the well.

List of attachments: Attachments as required by R649-5-2. As per 2.4 under R649-5.2, logs on file with the Division are as follows: Neutron Density and Resistivity.

## **Statement in support of Water Disposal application in opposition to Water Injection application**

### Disposal Evaluation Request

It is the request of Bill Barrett Corporation that the submitted applications for water disposal in the Prickly Pear field be evaluated based on water disposal and not water injection. This request is based on structural position of the proposed disposal intervals in these proposed water disposal wells, the very discontinuous nature of the proposed disposal intervals and the distance between the proposed disposal wells and the nearest economic gas production.

### Structural Position

Based on the supplied structure maps and well log analyses it is evident that the proposed disposal wells, Prickly Pear Federal 10-4 to the north and the Prickly Pear 12-24-12-14 to the south, are significantly down-dip from economic production to the east. Nearest economic gas production from the proposed disposal intervals lies more than 1-1/2 miles from the two proposed disposal wells.

From the shallowest proposed disposal interval in the Middle Wasatch, structural positions indicate a 100' change from the crest of the structure to the Prickly Pear Federal 10-4 and to the Prickly Pear 12-24-12-14 wellbore. This down-dip distance increases as penetration occurs deeper into the section. At the North Horn formation the change between top of structure and wellbore is 150' and 175' for the Pear Federal 10-4 and the Prickly Pear 12-24-12-14 respectively. This trend continues into the Dark Canyon (Upper Price River) with changes of 400' and 300' in the Pear Federal 10-4 and the Prickly Pear 12-24-12-14 respectively. Finally, by the time the Price River is penetrated the structural relief from the localized formation crest is 525' at the Prickly Pear Federal 10-4 and is 400' at the Prickly Pear 12-24-12-14.

The implication of this geologic condition is a proposed gross disposal interval well below the crest of the individual formations and unsuited for water injection support of the gas productive formations in the Prickly Pear field.

### Sand Discontinuity

The proposed disposal intervals, from the Middle Wasatch down to the Price River formations, are generally comprised of discontinuous sand bodies. A field study of well logs in the Peters Point area, which is just to the east of the Prickly Pear area, has indicated that producing sand bodies can be shown to be discontinuous even within spacing distances of less than 1,000 ft.

Based on this study it has been found that in the Peters Point area, at most about 50% of the Middle Wasatch sands can be correlated between wells as close as 1,000 ft. The number of correlative sands drops in the North Horn formation to less than 30% at a spacing of +/- 1,500 ft. Sands in the Dark Canyon (Upper Price River) are more correlative within the horizontal spacing of 1,500 ft to 2,000 ft with analysis that indicate these intervals are between 66.7% and 100% continuous. The analysis also observes an 80% correlation between completed Price River sands, but less than a 35% correlation of all Price River Sand, when within a horizontal spacing of 1,500 ft to 2,250 ft.

In total, for the Peters Point area, the wellbore sand correlation between wells ranging from 880 ft of horizontal spacing to a maximum studied distance of 2,360 ft indicates a range of between 41.2% and 47.1% for completed intervals and between

26.8% and 36.6% of all sand bodies found within and between the Middle Wasatch and the Price River.

Proposed Interval Fill-up

A common tool to evaluate the potential for waterflooding success is to calculate the required amount of water before reservoir pressurization could begin to occur. It is usual for this calculation to assume radial displacement and to consider, interval by interval, the porosity corrected vertical thickness ( $\phi \cdot h$ ) for the assumed allocation of injected water.

The following tables summarize for each of the proposed disposal wells, sand interval reservoir properties and resulting fill-up for a 1/2 mile radius:

Prickly Pear Federal 10-4 Disposal Interval		Thickness (ft)	Porosity (%)	Porosity-Feet ( $\phi \cdot h$ )	1/2 mile radius volume (bbl)
M.Wasatch	4772-4781	9	18	1.62	384,050
	4964-4968	4	17	0.68	161,206
N.Horn	5090-5095	5	17	0.85	201,508
	5450-5454	4	12	0.48	113,793
	5502-5507	5	14	0.7	165,948
Total proposed interval		27		4.33	1,026,505

-- Calculations assume 40% water saturation --

Prickly Pear 12-24-12-14 Disposal Interval		Thickness (ft)	Porosity (%)	Porosity-Feet ( $\phi \cdot h$ )	1/2 mile radius volume (bbl)
N.Horn	6295-6300	5	12	0.6	142,241
	6791-6799	8	15	1.2	284,482
	6908-6916	8	14	1.12	265,516
Dark Canyon	7258-7266	8	12	0.96	227,585
Price River	7620-7630	10	13	1.3	308,189
Total proposed interval		39		5.18	1,228,013

Based on the above calculations over 1 million barrels of water would have to be disposed into the Prickly Pear Federal 10-4 before any reservoir effect would be seen at 1/2 mile from the wellbore. This volume increases for the Prickly Pear 12-24-12-14 due the increase of proposed interval to over 1.2 million barrels. The amount to effect reservoir pressure increases to over 4.1 million barrels at the Prickly Pear Federal 10-4 location and 4.9 million barrels at the Prickly Pear 12-24-12-14 location if you consider a 1 mile radius around each well. Due to the large volumes required before fill-up can be obtained, water injection for pressure support in this area, for these reservoirs would not be practical.

Summary

Barrett Corporation feels, based on the arguments and calculations provided above, justified to request that the submitted application for water disposal into the Prickly Pear Federal 10-4 and the Prickly Pear 12-24-12-14 be evaluated as such and not on water injection criteria.

# 2.5

(revision to disposal procedure)

### Prickly Pear 12-24-12-14

NWSW Sec 24 T12S-R14E, Carbon County, UT

**Surface Casing:** 9-5/8" 36# J-55 STC @ 1,002' Cemented to surface  
**Production Liner:** 5-1/2" 17# L-80 LTC @ 9,491' Cemented w/1,850 sx

PBTD: 9,400' (Fish @ 7,665'), KB Elevation: 7,808', GL Elevation: 7,793'

#### Conversion to Disposal

1. Note: Water in the context of this procedure will be either clean produced water or 3% KCl water. Any water will require biocide as a precaution.
2. MIRU workover rig. Set tanks and fill with water. Using rig pump kill backside & tubing with water. ND WH & NU BOPE
3. TOOH w/production tubing. PU bit & scraper and TIH to top of fish at 7,665'. TOOH.
4. TIH w/cmt retainer to 7,650'. Establish injection and cement squeeze w/20sx. Sting out of retainer and circulate hole.
5. TOOH w/tubing. PU bit & scraper and TIH to top of retainer at 7,650'. TOOH.
6. PU RBP and Baker Hornet PKR w/bypass valve. TIH and set RBP at +/-7,640' PU and set PKR at +/-7,610'.
7. MIRU Halliburton. Pressure test surface lines to 6,000 psig. With bypass valve close pump into interval and establish rate at 500 psig surface pressure. Open bypass and displace 500 gal 7-1/2% HCl to bypass. Close bypass and pump acid into formation displacing with 50 bbl overflush. (Perfs 7,620 – 30' 3 spf 30 shots)
8. Release PKR and PU RBP. PU & set RBP at +/-7,275'. PU & set PKR at +/-7,245'.
9. With bypass valve close pump into interval and establish rate at 500 psig surface pressure. Open bypass and displace 500 gal 7-1/2% HCl to bypass. Close bypass and pump acid into formation displacing with 50 bbl overflush. (Perfs 7,258 – 66' 3 spf 24 shots)
10. Release PKR and PU RBP. PU & set RBP at +/-6,930'. PU & set PKR at +/-6,900'.
11. With bypass valve close pump into interval and establish rate at 500 psig surface pressure. Open bypass and displace 500 gal 7-1/2% HCl to bypass. Close bypass and pump acid into formation displacing with 50 bbl overflush. (Perfs 6,908 – 16' 4 spf 32 shots)
12. Release PKR and PU RBP. PU & set RBP at +/-6,810'. PU & set PKR at +/-6,780'.

13. With bypass valve close pump into interval and establish rate at 500 psig surface pressure. Open bypass and displace 500 gal 7-1/2% HCl to bypass. Close bypass and pump acid into formation displacing with 50 bbl overflush. (Perfs 6,791 – 99' 3 spf 24 shots)
14. Release PKR and PU RBP. PU & set RBP at +/-6,310'. PU & set PKR at +/-6,280'.
15. With bypass valve close pump into interval and establish rate at 500 psig surface pressure. Open bypass and displace 500 gal 7-1/2% HCl to bypass. Close bypass and pump acid into formation displacing with 50 bbl overflush. (Perfs 6,295 – 300' 4 spf 20 shots)
16. RDMO Halliburton.
17. Release PKR and PU RBP. TOO H w/tubing, PKR & RBP.
18. Redress PKR & TIH w/WL re-entry guide, tail joint, Hornet packer, 1.78" XN profile nipple, on-off tool, 1.81" X profile nipple and tubing. Set packer at +/- 6,230'.
19. Sting out of on-off tool and circulate annulus w/inhibited water. Sting into on-off tool.
20. Land tubing and ND BOPE & NU WH.
21. Set plug in XN nipple and pressure test tubing to 3,000 psig. Hold pressure for 30 minutes.
22. Retrieve profile plug.
23. Pressure test backside annulus to 1000 psig. Record pressure test on Barton chart recorder for 30 minutes at stabilizing. Send chart to Denver: Attn Chuck Maybee. Bleed off backside pressure.
24. RDMO workover rig. Turn well over to production group.

Total Acid: 2,500 gal 7-1/2% HCl double inhibited at 150 deg F

(addition to)

**Statement of Water Production:**

All waters proposed for disposal in both the Prickly Pear Federal 10-4 and the Prickly Pear 12-24-12-14 will be from Bill Barrett Corporation field production activities within the Prickly Pear Unit area. No 3<sup>rd</sup> party or off-unit waters will be accepted for disposal.

**From:** Chris Kierst  
**To:** Tracey Fallang  
**Subject:** Re: SWD Applications

Thank you for sending the supplemental information. I now have sufficient information to have the wells noticed. I will start the Noticing process by ordering the drafting of the initial Noticing paperwork today. I am going to try to generate an Rweq to attempt to corroborate the water analysis information from the surrounding non UIC wells with the information in the permit subject well logs. After the Noticing period is over we will issue a Letter of Approval to Convert the well to a Class II UIC well. However, we will require an acceptable Step Rate Test before we will issue a final Permit to Inject. As always, please feel free to contact me if you have any questions.

>>> "Tracey Fallang" <[tfallang@billbarrettcorp.com](mailto:tfallang@billbarrettcorp.com)> 04/18/2007 3:46 PM >>>  
Chris, just following up on your request for information and our response. At this time, do you need anything further from us and can you advise if/when the public comment period will begin?

Thank you.

**UIC INJECTION PERMIT APPLICATION ANALYSIS FORM**  
**WELL NAME: Prickly Pear Unit Federal 12-24**  
**API #: 4300730953**

R649-5-2. Requirements For Class II Injection Wells Including Water Disposal, Storage And Enhanced Recovery Wells.	Completed Items, Needed Items, & Comments
1. Injection wells shall be completed, equipped, operated, and maintained in a manner that will prevent pollution and damage to any USDW, or other resources and will confine injected fluids to the interval approved.	1. O.K.
2. The application for an injection well shall include a properly completed UIC Form 1 and the following:	2. Original form not correct. After consultation with Dan Jarvis I hand corrected, dated and initialled the original and received a revised signed and backdated Adobe Acrobat .pdf document (submitted on 3/30/07) from Tracey Fallang of Bill Barrett Corp. Form also was corrected in letter dated 4/11/07 to reflect the same injection interval cited for treatment in the disposal conversion procedure (tendered under 2.5)
2.1. A plat showing the location of the injection well, all abandoned or active wells within a one-half mile radius of the proposed well, and the surface owner and the operator of any lands or producing leases, respectively, within a one-half mile radius of the proposed injection well.	2.1 O.K.
2.2. Copies of electrical or radioactive logs, including gamma ray logs, for the proposed well run prior to the installation of casing and indicating resistivity, spontaneous potential, caliper, and porosity.	2.2 O.K. (on file in PIC Room)
2.3. A copy of a cement bond or comparable log run for the proposed injection well after casing was set and cemented.	2.3 O.K.
2.4. Copies of logs already on file with the division should be referenced, but need not be refiled.	2.4 O.K.
2.5. A description of the casing or proposed casing program of the injection well and of the proposed method for testing the casing before use of the well.	2.5 O.K. (Corrected 4/11/07 letter)
2.6. A statement as to the type of fluid to be used for injection, its source and estimated amounts to be injected daily.	2.6 O.K. (Corrected 4/11/07 letter)
2.7. Standard laboratory analyses of (1) the fluid to be injected, (2) the fluid in the formation into which the fluid is being injected, and (3) the compatibility of the fluids.	2.7 Operator suggests no sample of connate water can be gathered and Gil requests a log generated Rwa for the injection zone sands. I have requested some log analysis books from Halliburton to analyze their logs but have not been granted access to either their online books or hardcopies.
2.8. The proposed average and maximum injection pressures.	2.8 O.K but no proposed average injection pressure has been tendered as yet.
2.9. Evidence and data to support a finding that the proposed injection well will not initiate fractures through the overlying strata or a confining interval that could enable the injected fluid or formation fluid to enter the fresh water strata.	2.9 DOGM Management waived need for SRT in favour of accepting observed frac information provided by BBC in lieu of typical SRT information.
2.10. Appropriate geological data on the injection interval and confining beds, and nearby Underground Sources of Drinking Water, including the geologic name, lithologic description, thickness, depth, water quality, and lateral extent; also information relative to geologic structure near the proposed well which may effect the conveyance and/or storage of the injected fluids.	2.10 O.K.
2.11. A review of the mechanical condition of each well within a one-half mile radius of the proposed injection well to assure that no conduit exists that could enable fluids to migrate up or down the wellbore and enter improper intervals.	2.11 OK
2.12. An affidavit certifying that a copy of the application has been provided to all operators, owners and surface owners within a one-half mile radius of the proposed injection well.	2.12 OK
2.13. Any other additional information that the board or division may determine is necessary to adequately review the application.	2.13 O.K.

**OTHER COMMENTS AND OBSERVATIONS:** It was possible that this application could have been construed as more appropriate for an injection well rather than a disposal well because the Operator proposes to inject into the same overall zone that is being produced in the field. In a letter included in the mailing dated 4/11/07 the operators staff argued convincingly that though the zone was the same, the well failed to rise to the geologic and engineering standards necessary for an injection well and was more appropriately a disposal well. See the letter for the arguments.

R643 - 2. Requirements For Class II Injection Wells Including Water Disposal, Storage And Enhanced Recovery Wells.	Completed Items, Needed Items, & Comments
1. Injection wells shall be completed, equipped, operated, and maintained in a manner that will prevent pollution and damage to any fresh water, or other resource, and will confine injected fluids to the interval approved.	1. O.K.
2. The application for an injection well shall include a properly completed UIC Form 1 and the following:	2. Original form not correct. After consultation with Dan Jacobs I hand corrected, dated and initialled the original and received a revised signed and backdated Adobe Acrobat .pdf document (submitted on 3/30/07) from Tracey Fallang of Bill Barrett Corp. Form also was corrected in letter dated 4/11/07 to reflect the same injection interval cited for treatment in the disposal conversion procedure (tendered under 2.5)
2.1. A plat showing the location of the injection well, all abandoned or active wells within a one-half mile radius of the proposed well, and the surface owner and the operator of any lands or producing leases, respectively, within a one-half mile radius of the proposed injection well.	2.1 O.K.
2.2. Copies of electrical or radioactive logs, including gamma ray logs, for the proposed well prior to the installation of casing and indicating resistivity, spontaneous potential, caliper, and porosity.	2.2 O.K. (on file in PIC Room)
2.3. A copy of a cement bond or comparable log run for the proposed injection well after casing was set and cemented.	2.3 O.K.
2.4. Copies of logs already on file with the division should be referenced, but need not be refiled.	2.4 O.K.
2.5. A description of the casing or proposed casing program of the injection well and of the proposed method for testing the casing before use of the well.	2.5 O.K. (Corrected 4/11/07 letter)
2.6. A statement as to the type of fluid to be used for injection, its source and estimated amounts to be injected daily.	2.6 O.K. (Corrected 4/11/07 letter)
2.7. Standard laboratory analyses of (1) the fluid to be injected, (2) the fluid in the formation into which the fluid is being injected, and (3) the compatibility of the fluids.	2.7 Operator suggests no sample of connate water can be gathered and Gil requests a log generated Rwa for the injection zone sands. I have requested some log analysis books from Halliburton to analyze their logs but have not been granted access to either their online books or hardcopies.
2.8. The proposed average and maximum injection pressures.	2.8 O.K but no proposed average injection pressure has been tendered as yet.
2.9. Evidence and data to support a finding that the proposed injection well will not initiate fractures through the overlying strata or a confining interval that could enable the injected fluid or formation fluid to enter the fresh water strata.	2.9 A step rate test (SRT) on the injection interval will be needed to validate the calculated fracture gradient data provided for this well. This will be done after Noticing, Statement of Basis and Approval to Convert letter sent but prior to issuance of a Permit document.
2.10. Appropriate geological data on the injection interval and confining beds, and nearby Underground Sources of Drinking Water, including the geologic name, lithologic description, thickness, depth, water quality, and lateral extent; also information relative to geologic structure near the proposed well which may effect the conveyance and/or storage of the injected fluids.	2.10 O.K.
2.11. A review of the mechanical condition of each well within a one-half mile radius of the proposed injection well to assure that no conduit exists that could enable fluids to migrate up or down the wellbore and enter improper intervals.	2.11 OK
2.12. An affidavit certifying that a copy of the application has been provided to all operators, owners and surface owners within a one-half mile radius of the proposed injection well.	2.12 OK
2.13. Any other additional information that the board or division may determine is necessary to adequately review the application.	2.13 O.K.

**OTHER COMMENTS AND OBSERVATIONS:** It was possible that this application could have been construed as more appropriate for an injection well rather than a disposal well because the Operator proposes to inject into the same overall zone that is being produced in the field. In a letter included in the mailing dated 4/11/07 the operators staff argued convincingly that though the zone was the same, the well failed to rise to the geologic and engineering standards necessary for an injection well and was more appropriately a disposal well. See the letter for the arguments.

<p>2.5. A description of the casing or proposed casing program of the injection well and of the proposed method for testing the casing before use of the well.</p>	<p>2.5 OK but the program is currently attempting to treat a set of perfs above those included in the UIC Form 1. MIT needs 1000 psi <u>NOT</u> 500 psi!</p>
<p>2.6. A statement as to the type of fluid to be used for injection, its source and estimated amounts to be injected daily.</p>	<p>2.6 The information submitted doesn't address the informational request.</p>
<p>2.7. Standard laboratory analyses of (1) the fluid to be injected, (2) the fluid in the formation into which the fluid is being injected, and (3) the compatibility of the fluids.</p>	<p>2.7 An analysed sample of the injection zone connate water in the subject well is needed to satisfy (2) and (3). This will be done after Noticing, Statement of Basis and Approval to Convert letter sent but prior to issuance of a Permit document.</p>
<p>2.8. The proposed average and maximum injection pressures.</p>	<p>2.8 O.K but no proposed average injection pressure has been tendered as yet.</p>
<p>2.9. Evidence and data to support a finding that the proposed injection well will not initiate fractures through the overlying strata or a confining interval that could enable the injected fluid or formation fluid to enter the fresh water strata.</p>	<p>2.9 A step rate test (SRT) on the injection interval will be needed to validate the calculated fracture gradient data provided for this well. This will be done after Noticing, Statement of Basis and Approval to Convert letter sent but prior to issuance of a Permit document.</p>
<p>2.10. Appropriate geological data on the injection interval and confining beds, and nearby Underground Sources of Drinking Water, including the geologic name, lithologic description, thickness, depth, water quality, and lateral extent; also information relative to geologic structure near the proposed well which may effect the conveyance and/or storage of the injected fluids.</p>	<p>2.10 OK but injection zone is in the same zone as production so they will probably get permission from the Board to do this as a water flood.</p>
<p>2.11. A review of the mechanical condition of each well within a one-half mile radius of the proposed injection well to assure that no conduit exists that could enable fluids to migrate up or down the wellbore and enter improper intervals.</p>	<p>2.11 OK</p>
<p>2.12. An affidavit certifying that a copy of the application has been provided to all operators, owners and surface owners within a one-half mile radius of the proposed injection well.</p>	<p>2.12 OK</p>
<p>2.13. Any other additional information that the board or division may determine is necessary to adequately review the application.</p>	<p>2.13 O.K.</p>

OTHER COMMENTS AND OBSERVATIONS: It is possible that this application may become a Board matter because the Operator proposes to inject into the same zone that is being produced in the field and this is more likely to be construed as a water flood not a salt water disposal operation and the well would be an injection well rather than a salt water disposal well.

**Subject:** RE: SWD Applications

Among other things, we discussed SRTs and the need for connate water samples from the injection interval. With respect to the connate water samples we said we would see if we could find alternate means to validate the samples and analyses as reasonably representative substitutes for the subject permit wells. We never agreed to accept the frac data as a substitute for a SRT for the purpose of issuance of a final permit to inject. We considered it sufficient to approve the conversion of the wells to Class II UIC wells but, in consultation with higher management, the frac data was deemed insufficient for a final permit, the SRT standards being rigorously defined by USEPA.

Thank you for sending the supplemental information. I now have sufficient information to have the wells Noticed. I will start the Noticing process by ordering the drafting of the initial Noticing paperwork today. I am going to try to generate an Rweq to attempt to corroborate the water analysis information from the surrounding non UIC wells with the information in the permit subject well logs. After the Noticing period is over we will issue a Letter of Approval to Convert the well to a Class II UIC well. However, we will require an acceptable Step Rate Test before we will issue a final Permit to Inject. As always, please feel free to contact me if you have any questions.

CLASS II INJECTION WELLS

---

THE STATE OF UTAH TO ALL PERSONS INTERESTED IN THE ABOVE ENTITLED  
MATTER.

Notice is hereby given that the Division of Oil, Gas and Mining (the "Division") is commencing an informal adjudicative proceeding to consider the application of Bill Barrett Corporation for administrative approval of the Prickly Pear U Fed 10-4 and the Prickly Pear U Fed 12-24 wells, located in SE/4 SE/4 Section 10 and SW/4 SW/4 Section 24, Township 12 South, Range 14 East, Carbon County, Utah, for conversion to Class II injection wells. These wells are located in the Prickly Pear Unit. The adjudicative proceeding will be conducted informally according to Utah Admin.Rule R649-10, Administrative Procedures.

Selective zones in the North Horn, Wasatch and Upper Price River Formations will be used for water injection. The maximum requested injection pressure and rate will be determined based on fracture gradient information submitted by Bill Barrett Corporation.

Any person desiring to object to the proposed application or otherwise intervene in the proceeding, must file a written protest or notice of intervention with the Division within fifteen days following publication of this notice. The Division's Presiding Officer for this proceeding is Gil Hunt, Associate Director at PO Box 145801, Salt Lake City, Utah 84114-5801, phone number (801) 538-5340. If such a protest or notice of intervention is received, a hearing will be scheduled in accordance with the aforementioned administrative procedure rule. Protestants and/or interveners should be prepared to demonstrate at the hearing how this matter affects their interests.

Dated this 23<sup>rd</sup> day of April, 2007.

**Subject:** RE: SWD Applications

Among other things, we discussed SRTs and the need for connate water samples from the injection interval. With respect to the connate water samples we said we would see if we could find alternate means to validate the samples and analyses as reasonably representative substitutes for the subject permit wells. We never agreed to accept the frac data as a substitute for a SRT for the purpose of issuance of a final permit to inject. We consider it sufficient to approve the conversion of the wells to Class II UIC wells but, in consultation with higher management, the frac data was deemed insufficient for a final permit, the SRT standards being rigorously defined by USEPA.

>>> "Tracey Fallang" <tfallang@billbarrettcorp.com> 04/19/2007 3:28 PM >>>  
Chris, I thought we sufficiently addressed the step-rate test with the table provided in section 2.6? Can you clarify?

Subject: Re: SWD Applications

Thank you for sending the supplemental information. I now have sufficient information to have the wells Noticed. I will start the Noticing process by ordering the drafting of the initial Noticing paperwork today. I am going to try to generate an Rweq to attempt to corroborate the water analysis information from the surrounding non UIC wells with the information in the permit subject well logs. After the Noticing period is over we will issue a Letter of Approval to Convert the well to a Class II UIC well. However, we will require an acceptable Step Rate Test before we will issue a final Permit to Inject. As always, please feel free to contact me if you have any questions.

>>>

Chris, just following up on your request for information and our response. At this time, do you need anything further from us and can you advise if/when the public comment period will begin?

Thank you.

Tracey Fallang

Dear Chris,

I am writing to try to address your concerns relating to a step-rate test request, you sent to Tracey Fallang, yesterday, May 1st. Attached is a document you may have seen before. I think it was included in our application for converting the Prickly Pear #10-4 and #12-24, into SWD wells. The attached document addresses the concepts behind your request to see a pressure "breakover" or fracture extension pressure in an SRT. As you probably know, a pressure "breakover" in an SRT indicates fracture extension pressure at that inflection point and is the pressure we want to stay below, when injecting water into the well for disposal purposes. The attached file lists ISIP's for the different formations into which we propose to inject. With the observed ISIP's, and the fluid pressure gradient of .4417 psi/ft, we can calculate the BHTP's, which are the extension pressures you are looking for. You mention in your letter that "A frac simulation does not provide the requisite degree of procedural rigor to demonstrate a pressure breakover....". These data are not simulations; they are observed pressures and demonstrate fracture extension pressure by way of ISIP, which is equivalent to the "pressure break over" inflection point you mentioned. If you meant frac stimulations, I believe they do demonstrate fracture extension pressures. Also, we are requesting a maximum surface pressure 200 psi lower or 90% than the lowest observed ISIP or extension pressure and an average surface pressure 500psi lower or 75% of observed fracture extension pressure. If there is any error in equating ISIP to fracture extension pressure, it is on the low side or conservative side and ISIP's would tend to be approaching closure pressure and provide us with even more of a safety factor. Lastly, if multiple zones are open, which they are, it may be difficult to achieve fracture extension pressure during a SRT, due to formation leakoff, unless a fairly high injection rate is used. I will give you a call shortly to try to address any additional questions you may have and get your feedback. Thank you for your consideration in this matter.

Sincerely,

### West Tavaputs Field SWD Well Application

#### Maximum Allowable Surface Pressure Calculations Based on Observed Fracture Gradients

Water SG = 1.02      Gradient = 0.4417 psi/ft

Prickly Pear Federal 10-4			
Depth (ft)	Observed ISIP (psig)	Calculated Btm Hole (psig)	Resulting Frac Grad (psi/ft)
4772	2220	4327.6	0.907
4964	2600	4792.4	0.965
5450	3030	5437.0	0.998
6700	4120	7079.1	1.057
6890	4100	7143.0	1.037
7180	3910	7081.1	0.986
7550	3910	7244.5	0.960

Requested Max Surface Pressure = 2000 psig

Prickly Pear 12-24-12-14			
Depth (ft)	Observed ISIP (psig)	Calculated Btm Hole (psig)	Resulting Frac Grad (psi/ft)
6295	No Treatment		
6791	3350	6349.3	0.935
6908	No Treatment		
7620	2900	6265.4	0.822
8620	2980	6787.1	0.787
9242	4390	8471.8	0.917

Requested Max Surface Pressure = 2000 psig

ISIP Data collected during initial completion treatments

Calculated Bottom Hole Pressure = ISIP + 0.4417 x Depth  
Resulting Frac Gradient = Calculated Btm Hole Pressure / Depth

Requested Max Surface Pressure < 90% x ISIP  
Anticipated Avg Surface Pressure = 75% x Max Surface Pressure

Anticipated Avg Disposal Rate = 400 bwpd / well  
Requested Maximum Disposal Rate = 2000 bwpd / well

**Subject:** Prickly Pear 12-24 Injection Test

John, based on the results of the MIT conducted today (and witnessed by DOGM), we now have a green light from DOGM and BLM to move forward with the injection test. Please forward a copy of the MIT results to me so that I can provide to Eric and Chris (and we will NOT be required to do another MIT after the test). In addition, once the injection test is complete, we'll need to provide test results within 30 days.

Hi Jim,

In response to your request that the Division entertain your suggested use of frac information as an alternative to the customary SRT, I batted it around with several managers/engineers. We'll give you half a loaf on this. If everything else in the permit application is acceptable, we'll let you have a permit without a SRT but, instead, based on the frac information you provide. You will not, however, be permitted to inject at 2000# surface pressure but at 1700# surface pressure. This should provide an acceptable margin of error from injecting the worst case heaviest field brine that you sampled. Please send me the documentation of the source of the 0.4417 psi/ft frac gradient and the nature of the frac fluid you used in your proposal. If this is acceptable to you please inform me.

**Attachments:** PrPr 12-24 Wasatch Perforations.xls; PrPr 12-24 Conversion Procedure (2) 06-23-08.doc

Chris, as a refresher on this, we had submitted the initial UIC application in April 2007. We received administrative approval in July 2007, conducted the step-rate test & MIT and then conducted an initial injection test in May 2008. The initial rate was approximately 500 BWPD @ 1200 psi, then dropped to 375 BWPD @ 1750 psi and finally ended up at 230 BWPD @ 1750 psi. These results are not sufficient to maintain a viable disposal facility. We have taken another look at the logs on this well and have found a number of intervals in the Wasatch that may have water injection potential (BBC does currently produce hydrocarbons out of the Wasatch in both Prickly Pear and Peter's Point).

My question to you is - what additional information needs to be provided for approval of these additional perfs and to also move forward with testing of this interval? I've attached the procedure and Wasatch perf information.

Thank you.

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Conditional approvals have been received from the BLM and the State of Utah, Division of Oil, Gas and Mining to convert this well to a water disposal well. Upon initial testing of the existing perf'd intervals (with poor disposal results) and after further review of the logs for this well, we would like to request to perf the Middle Wasatch following the attached procedure to conduct further disposal testing. Upon completion of the new perfs, BBC would conduct a step-rate test and file for an amended UIC permit.

If you should have any questions or need additional information, please contact me at 303-312-8134.

Bill Barrett Corporation proposes to inject produced waters from the Prickly Pear Unit area (from the middle Wasatch Formation, including the Dark Canyon Conglomerate beds, the North Horn Formation and the upper part of the Price River Formation) and inject into an interval that includes the middle Wasatch Formation, including the Dark Canyon Conglomerate beds, the North Horn Formation and the upper part of the Price River Formation. The conversion procedure specifies isolating the junked portion of this hole below 7,665' TD with 20 sacks of cement, acidizing the existing perms within the proposed permitted injection interval and landing 2 3/8" injection tubing with subsequent pressure testing of the tubing and casing. They propose to inject 2,000 barrels of field-produced water per day at an injection pressure of 2,000 psig.

The Operator had the well logged to obtain a Cement Bond Log (CBL) on 10/7/2004. An examination of the CBL reveals that sufficient cement with a bond index of 80% or greater is indicated to permit the well.

**Ground Water Protection:**

High quality water, water with Total Dissolved Solids (TDS) concentrations less than 800 milligrams / liter (mg/l), issues from springs and streams that arise from within Tertiary and upper Cretaceous strata along the Tavaputs Plateau. Determinations of the base of moderately saline ground water in nearby drilled wells indicates that it is estimated to be encountered at an elevation of about 3,000 feet (about 4,800 feet Total Depth) in the subject well. The proposed injection zone in the subject well is about 1,500 feet below the base of moderately saline ground water and is therefore unlikely to contaminate any quality fresh water resource. The 5½" production casing was cemented to within about 800 feet of the surface. This should be adequate to protect superjacent aquifers containing quality water resources.

TDS values of water samples obtained from likely contributor produced water

source wells in the area ranged from 32,224 to 90,004 mg/l. Champion Technologies tested the samples and a report was issued on March 4, 2007. The samples generally grouped around 65,000 mg/l.

The proposed injection interval (middle Wasatch Formation, including the Dark Canyon Conglomerate beds, the North Horn Formation and the upper part of the Price River Formation) is primarily in the Wasatch – Green River Confining Unit, however it does contain a Utah component of the recognized Mesaverde Aquifer, that being the upper part of the Price River Formation. The Price River injection perforations are at about 7,600' TD, are about 2,800' below the Base of Moderately Saline Ground Water and are unlikely to meet the standard for classification as an Underground Source of Drinking Water (USDW). This opinion is supported by resistivity values, NaCl calculations and Total Dissolved Solids (TDS) estimations published in two industry water chemistry publications, one of which is Circular 87 produced by the Utah Geological Survey. For the Mesaverde Group calculated NaCl ranged from about 10,500 ppm to about 19,100 ppm and estimated TDS ranged from about 12,900 to about 23,000 mg/l. Additional support was garnered from subject well's wireline log calculated Rws for the sandstones of the perforated interval, which provided that there were no calculated NaCl concentrations fresher than about 13,000 ppm using the conservative Humble Relationship (  $a = 0.62$  and  $m = 2.15$ ) in the Archie Equation.  $R_w$  was determined using the relationship  $R_w = F / R_o$ .  $R_o$  was assumed equivalent to  $R_t$  in clean sands (API gamma radioactivity < 45) with obvious permeability, minimal neutron methane crossover and likely high water saturation. Porosity was determined by crossplot from the Neutron Density log. As discussed above, produced water from offset field wells, which largely produce from other sands within the same overall interval, but higher on the structure, could provide no ground water less saline than about 32,000 mg/l, a value in excess of the maximum 10,000 mg/L TDS standard for designation as a USDW.

A step rate test (SRT) is not planned for this well. Instead, Division management has elected to accept calculated Maximum Allowable Surface Pressures and fracture gradients based on observations from well production stimulation fracture data (Initial Shut In Pressures and the fluid pressure gradient of 0.4417 psi/ft).

The North Horn Aquifer is included within the greater Mesaverde Aquifer. Both aquifers are below the Green River / Wasatch Confining Unit, which is the first recognized, contiguous confining unit above the injection interval, although there are probably several unrecognized intervals capable of serving as confinement in the intervening column. In the subject application the Operator proposes such a status for a zone that is in the upper Price River but below their Price River proposed injection perforations (a lower confining interval). The upper Green River Formation also contains a recognized aquifer and water is produced from a shallow upper Green River Formation aquifer in the area.

The subject well appears to be situated on the north flank of the WNW trending trace of the Garmesa Fault, which is expressed at the surface as a system of joints, faults and grabens. This system is about 1½ miles SSW of the proposed salt-water disposal well and extends for about 5 miles to the northwest and 17 miles to the southeast from the nearest point of the system to the subject well. Surface mapping reveals that the system is known to extend to depth at least to the top of the Colton (Wasatch) Formation. In this area the Colton/Wasatch Formation is the basal stratigraphic unit of the Wasatch-Green River Confining Unit as well as being the stratigraphic unit at the floor of the relatively nearby wild and scenic Desolation Canyon section of the Green River. There is about 3,050' of vertical separation between the injection zone and the Colton Formation in the floor of Desolation Canyon. It is not known with complete certainty if the fractures/faults penetrate into the upper Colton/Wasatch Formation. If the fracture/fault system was accessed, it

could potentially present a conduit for the movement of injectate toward the Green River. I consider this to be an unlikely scenario owing to the great vertical separation and the greater likelihood that the preponderant shales of the Colton/Wasatch, the North Horn and the Price River Formations will serve for confinement and the cement and casing will prevent the vertical migration of injectate. I do not consider the foregoing discussion to pose a significant impediment to granting an injection permit for this well but it is presented merely to confirm consideration.

After reviewing the application and documentation submitted by Bill Barrett Corporation, I find that the injection of the Unit produced waters into the proposed injection interval in the Prickly Pear Unit Federal 12-24 well, will cause no diminution of the quality of the already poor quality water in the injection zone. After injection ceases, increased pressure about the wellbore will abate over time. It is therefore to be concluded that no long term negative surficial or ground water impacts are anticipated resultant of the proposed injection operation.

#### **Oil/Gas & Other Mineral Resources Protection:**

A review of production records of the fields in the area reveals that most of the production is coming from the Wasatch and North Horn Formations and the Mesaverde Group. Some minor production has also come from the Mancos Shale, the Dakota Sandstone and perhaps even from the lower Mesaverde Group. The productive sands are of fluvial origin and, while giving the appearance of being correlative, are typically discontinuous and therefore not contiguous reservoirs and unlikely to interfere with the pressures in the productive reservoirs higher on the structure. No other known potentially producible mineral or hydrocarbon zones are reported in the area.

The well records of the Division document that there are no other wells within the half (1/2) mile area of review (AOR).

**Bonding:**

Bill Barrett Corporation has a \$120,000 blanket surety bond in place, which ensures plugging of this well. Bond No. LPM4138148, issued by Fidelity and Deposit Company of Maryland.

**Actions Taken and Further Approvals Needed:**

Notice of this application was published in the Salt Lake Tribune and the Carbon County Sun Advocate. In addition, copies of the notice were provided to the Environmental Protection Agency (EPA), Region VIII, Bureau of Land Management (BLM) Moab, Carbon County Planning, Petro-Canada Resources and the Operator.

A properly designed and constructed water disposal well, combined with periodic mechanical integrity tests, poses no threat to fresh or useable groundwater supplies.

The Division staff recommends approval of this application contingent upon no additional or unforeseen information being presented that is relevant to this analysis or modifies the data presented herein.

Re: Application for Class II Injection Permit, Prickly Pear Unit Federal 12-24 Well,  
Section 24, Township 12 South, Range 14 East, Carbon County, Utah, API 43-007-30953

Dear Sir:

Pursuant to Utah Admin. Code R649-5-3-3, the Division of Oil, Gas and Mining (the "Division") issues its administrative approval for conversion of the referenced well to a Class II injection well. Accordingly, the following stipulations shall apply for full compliance with this approval and a permit may be issued upon compliance with the stipulations.

1. Conformance with all conditions and requirements of the complete application submitted by Bill Barrett Corporation.
2. Compliance with all applicable requirements for the operation, maintenance and reporting for Underground Injection Control ("UIC") Class II injection wells pursuant to Utah Admin. Code R649-1 et seq.
3. A casing/tubing pressure test shall be conducted prior to commencing injection.

Note that this letter does not constitute final approval to commence injection operations. This approval is only temporary and allows Bill Barrett Corporation to perform activities and gather information necessary for the Division to issue a Class II Underground Injection Control permit.

If you have any questions regarding this approval or the necessary requirements, please contact Christopher Kierst at (801) 538-5337.

Sincerely,

Gil Hunt  
Associate Director

**Subject:** RE: FW: Prickly Pear 12-24 Injection Well-Additional Wasatch perforations.

Thanks Chris. And just to reconfirm, our current max injection pressure will be 2000 psi as per the application.

-----Original Message-----

 Sent: Thursday, July 10, 2008 10:04 AM  
 To: Tracey Fallang  
 Subject: Re: FW: Prickly Pear 12-24 Injection Well-Additional Wasatch perforations.

Please continue to use the current zone within the context of the permission to proceed that we have already granted for the zone. We will inform you if we reach a point where the Division feels the need to write a permanent permit for the zone.

As regards the request to open up new perforations in the Wasatch Formation, this constitutes a permit modification and we need to have this Noticed (15 days during standard 5 day work weeks) and a Sundry submitted informing us of the proposed activities in the well and a new UIC Form 1 to initiate the permit modification process. In addition, we need a map informing us of the proximity of Wasatch Formation production to the subject well and a geologic defense of the selection of the proposed productive zone for injection of produced water.

Please feel free to contact me if you need additional information or guidance in this matter.

(801) 538-5337

>>> Tracey Fallang <tfallang@billbarrettcorp.com> 07/07/2008 10:56 AM >>>

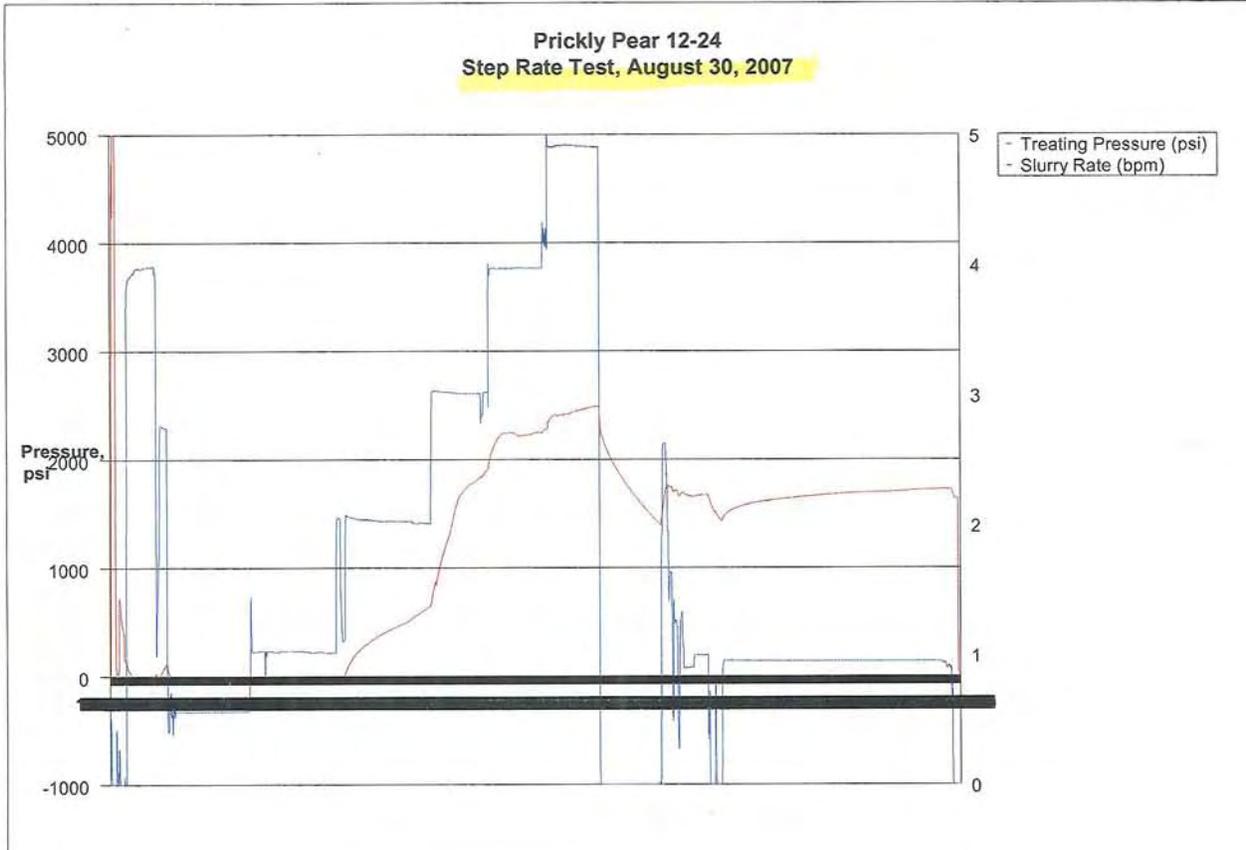

Chris, as a refresher on this, we had submitted the initial UIC application in April 2007. We received administrative approval in July 2007, conducted the step-rate test & MIT and then conducted an initial injection test in May 2008. The initial rate was approximately 500 BWPD @ 1200 psi, then dropped to 375 BWPD @ 1750 psi and finally ended up at 230 BWPD @ 1750 psi. These results are not sufficient to maintain a viable disposal facility. We have taken another look at the logs on this well and have found a number of intervals in the Wasatch that may have water injection potential (BBC does currently produce hydrocarbons out of the Wasatch in both Prickly Pear and Peter's Point).

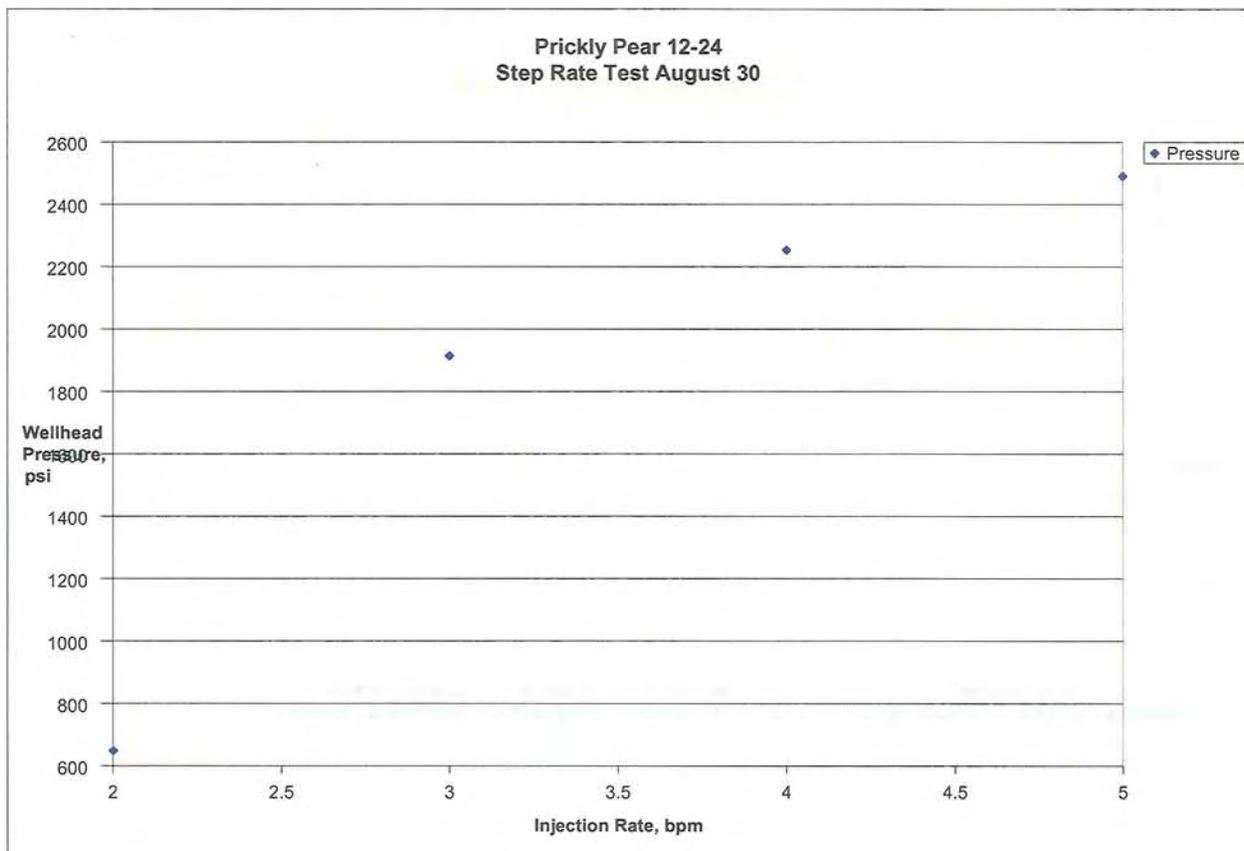

*North Horn et al*

*8/30/07*

My question to you is - what additional information needs to be provided for approval of these additional perms and to also move forward with testing of this interval? I've attached the procedure and Wasatch perf information.

Thank you.

BUREAU OF LAND MANAGEMENT

**COPY**

FORM APPROVED  
OMB No. 1004-0137  
Expires: March 31, 2007

**SUNDRY NOTICES AND REPORTS ON WELLS**

*Do not use this form for proposals to drill or to re-enter an abandoned well. Use Form 3160-3 (APD) for such proposals.*

**SUBMIT IN TRIPLICATE- Other instructions on reverse side.**

1. Type of Well  
 Oil Well   Gas Well  Other

2. Name of Operator **BILL BARRETT CORPORATION**

3a. Address  
**1099 18th Street Suite 2300 Denver CO 80202**

3b. Phone No. (include area code)  
**303 312-8134**

4. Location of Well (Footage, Sec., T., R., M., or Survey Description)  
**SWSW, 1271' FSL, 483' FWL, Section 24-T12S-R14E S.L.B.&M.**

5. Lease Serial No.  
**UTU-77513**

6. If Indian, Allottee or Tribe Name  
**n/a**

7. If Unit or CA/Agreement, Name and/or No.  
**Prickly Pear / UTU-79487**

8. Well Name and No.  
**Prickly Pear Unit Fed 12-24**

9. API Well No.  
**43-007-30953**

10. Field and Pool, or Exploratory Area

11. County or Parish, State  
**Carbon County, Utah**

**12. CHECK APPROPRIATE BOX(ES) TO INDICATE NATURE OF NOTICE, REPORT, OR OTHER DATA**

TYPE OF SUBMISSION	TYPE OF ACTION

	<input type="checkbox"/> Change Plans	<input type="checkbox"/> Plug and Abandon	<input type="checkbox"/> Temporarily Abandon	
	<input type="checkbox"/> Convert to Injection	<input type="checkbox"/> Plug Back	<input type="checkbox"/> Water Disposal	

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Conditional approvals have been received from the BLM and the State of Utah, Division of Oil, Gas and Mining to convert this well to a water disposal well. Upon initial testing of the existing perf'd intervals (with poor disposal results) and after further review of the logs for this well, we would like to request to perf the Middle Wasatch following the attached procedure to conduct further disposal testing. Upon completion of the new perfs, BBC would conduct a step-rate test and file for an amended UIC permit.

If you should have any questions or need additional information, please contact me at 303-312-8134.

**Workover Procedure**

- 01 MIRU workover tools.
- 02 Blow down well and kill with filtered production water if needed.
- 03 ND tree and NU BOPs.
- 04 Release packer and TOO H with tubing.
- 05 RU E-Line and set CBP @ +/- 4,700'. Perforate interval #1 on attached table with 3 3/8" expendable guns loaded with OWEN "HERO" charges 6 JSPF @ 60° phasing. Frac interval with small frac as per Halliburton recommendation.
- 06 Set CFP and continue to perf and frac intervals on attached sheet.
- 07 Flow well to clean up.
- 08 PU bit and TIH with tubing. Drill out CFPs and clean out to PBTD @ 7,648'.
- 09 TOO H and LD bit.
- 10 PU Halliburton "PLS packer and TIH. Circulate annulus with packer fluid and space out tubing. Set packer @ +/- 3,400'.
- 11 ND BOPs and NU tree.
- 12 Perform MIT on casing, tubing and packer by pressure testing to 1,500 psi with DOGM witness\* present.
- 13 RDMO workover tools.
- 14 Conduct step-rate test and forward information with modified UIC permit to Division Oil, Gas, and Mining and BLM.

API #43-007-30953**

Bill Barrett Corporation has completed perforating and fracing 6 stages in the Wasatch interval on the Prickly Pear 12-24 well from 4,518' to 3,482'. Enclosed are the treatment summary sheets and the treating pressure graphs from CalFrac for each stage. After drilling out the composite frac plugs, a Halliburton "PLS" packer was run on 2.375", 4.7#, N-80, EUE 8rd tubing and set at 3,400' leaving the Price River, Dark Canyon, North Horn and Wasatch intervals open for water disposal. The tubing, packer and casing were pressure tested to 1,500 psi and the chart for the MIT is enclosed.

On each of the six stages, BBC shut down pumping after seeing an initial breakdown and recorded the instant shutdown pressure (ISIP) for each stage. BBC also recorded the final ISIP at the end of each stage. The initial and the final ISIPs along with their corresponding frac gradients are shown in the enclosed "**Prickly Pear 12-24 Disposal Well**" graph. After plotting the frac gradients for each stage, the initial ISIP on stage 2 and both the initial and final ISIPs on stages 3 and 4 appear to be abnormally low compared to the other stages. BBC then looked at the frac gradients for the Wasatch intervals on the offsetting Prickly Pear 13-17D-12-15 pad and found the following results:

Well Name	Stage	Final Gradient psi/ft
Prickly Pear 12-17D	12	0.960
	13	0.960
	14	0.980
	15	1.020
	16	1.080
Prickly Pear 13-17D	11	0.970
	12	0.980
	13	0.960
Prickly Pear 14-17D	07	0.920
	08	1.050
Prickly Pear 16-18D	10	1.030
	11	1.110
	12	1.210

**PRICKLY PEAR FEDERAL 12-24-12-14**  
**1,271' FSL & 483' FWL**  
**SW/SW SECTION 24-T12S-R14E-W26M**  
**CARBON COUNTY, UTAH**  
**API #43-007-30953**

The gradients on the offset wells are very similar to the final gradients on stages 1, 2, 5 and 6 of the Prickly Pear 12-24 well and would further indicate that the frac gradients seen on stages 3 and 4 may not be right.

The Wasatch interval in the Prickly Pear area is an under-pressured reservoir with a pore pressure gradient of approximately 0.38 psi/ft. BBC fraced the Wasatch intervals with a water based fluid with a hydrostatic gradient of approximately 0.44 psi/ft. Stages 3 and 4 both appear to have very high permeability as seen in the high leak-off rate after final shut-down. The shut in casing pressure on stage 3 bled off to 0 psi in 11 minutes and on stage 4 bled off to 0 psi in 3 minutes. BBC believes the high leak-off rate in these two intervals may be a factor causing us to see lower ISIPs in these two intervals than what we would expect to see. BBC would contend that in these two intervals, we either (a.) were not pumping enough rate to overcome the leak-off into the formation and did not generate a significant fracture in the formation or (b.) as we started to step down rate at the end of the jobs, the leak-off was higher than the pump rate and the fractures closed before we got to the final shutdown.

After the packer was run and the MIT was performed, BBC set up two 500 bbl frac tanks and filled them with produced water from the Prickly Pear wells. BBC injected the 1,000 bbls of produced water into the Prickly Pear well to test the viability of the newly completed interval for injection and to try to get a step-rate test to establish a maximum surface injection pressure. The water was injected at 2,700 bbl/day with 0 psi surface injection pressure. The tubing went on a vacuum immediately after shut down further confirming the high permeability in some of the Wasatch intervals. Because the Prickly Pear 12-24 well took water at 0 psi surface injection pressure, BBC was not able to obtain a step-rate test and requests that the maximum allowable surface injection pressure be determined from the frac gradients recorded on the six Wasatch fracs.

The "Prickly Pear 12-24 Disposal Well" graph shows the Initial and Final Gradient trendlines for the six Wasatch fracs and show an initial frac gradient of approximately 0.68 psi/ft and a final frac gradient of approximately 0.88 psi/ft. The trendlines include data from stages 3 and 4 which BBC believes are too low as we normally don't see sections within an interval that have significantly lower frac gradients than the sections above and below them. BBC would propose to use the average of the Initial and Final trendlines or 0.78 psi/ft as the starting point for maximum allowable injection pressure on the Prickly Pear 12-24 disposal well. BBC believes that the actual frac gradient in this interval is closer to 0.95 to 1.0 psi/ft and is supported by the Final frac gradients on stages 1, 2, 5 and 6 as well as on the offset wells, so using 0.78 psi/ft as a starting point will allow a significant margin for error.

**Bill Barrett Corporation**

**PRICKLY PEAR FEDERAL 12-24-12-14**

**1,271' FSL & 483' FWL**

**SW/SW SECTION 24-T12S-R14E-W26M**

**CARBON COUNTY, UTAH**

**API #43-007-30953**

Using the following formula, *maximum surface injection pressure = (frac gradient – hydrostatic gradient of injected water) x depth of top interval*, and a frac gradient of 0.78 psi/ ft, maximum surface injection pressure =  $(0.78 \text{ psi/ft} - 0.433 \text{ psi/ft}) \times 3500' = 1,215 \text{ psi}$ . BBC would propose setting the initial maximum allowable surface injection pressure at **1,200 psi** with a rate of **3,000 bbl/day** on the **Prickly Pear 12-24-12-14 Disposal Well**. After BBC has been injecting into this well for a period of time, we would expect the reservoir pressure to increase along with the surface injection pressure. If the surface injection pressure starts to approach the maximum allowable pressure, BBC would perform a step-rate test on the well and submit a request for a change in maximum allowable surface treating pressure based on the results of the step-rate test.

**Subject:** Re: Prickly Pear 12-24 SWD

Hi Tracey,

You do not need to re-Notice for this procedure. You do not have to perform a Step Rate Test (SRT) for the interval specified as Interval (Stage) #1 on the Table (4,500' to 4,518' TD) attached to the Sundry Notice dated 7/16/2008. This interval will be construed by DOGM to be covered under the existing Permitted Maximum Allowable Surface Pressure (2,000 psi). However, subsequent uphole zones in the middle Wasatch Formation, as listed on the cited attached Table, that may be proposed for perforation, will require SRT. You will need to submit a new Sundry Notice requesting permission to inject into the new middle Wasatch Formation perforations as a Permit Modification. If everything is acceptable on the Sundry Notice then Brad Hill will approve it and a copy will be returned. We can provide a verbal permission to proceed after receipt and approval of the new Sundry Notice if you feel it is warranted. Otherwise, normal documentation of approval will occur within a conventional postal delivery cycle. Please contact me if you have any questions (801) 538-5337 or [chriskierst@utah.gov](mailto:chriskierst@utah.gov).

>>> Tracey Fallang <[tfallang@billbarrettcorp.com](mailto:tfallang@billbarrettcorp.com)> 09/09/2008 11:52 AM >>>

Chris, we received the SWD permit, thank you. A couple of questions as we get closer to frac'ing that upper zone.

- 1) Because the original public notice dated April 23, 2007 included the Wasatch, will you need to re-notice or are we OK?
- 2) Once we perf and frac, what is the next process. Will we then need to complete another step-rate and provide you with those results and then amend the current permit?
- 3) I guess based on your answer for #2 above, how long will the approval take of the amended permit as the engineer in our office has concern about shutting the well in.

Thanks Chris!

### UNDERGROUND INJECTION CONTROL PERMIT

Cause No. UIC-338

**Operator:** Bill Barrett Corporation  
**Wells:** Prickly Pear Unit Federal 12-24  
**Location:** Section 24, Township 12 South, Range 14 East (SLBM)  
**County:** Carbon  
**API No.:** 43-007-30953  
**Well Type:** Salt Water Disposal Well

#### Stipulations of Permit Approval

1. Approval for conversion to Injection Well issued on July 31, 2007
2. Maximum Allowable Surface Pressure: 2000 psi.
3. Corresponding Injection Rate: As limited by pressure.
4. Injection Interval: Perforations between 6,295' and 7,630' in the North Horn Formation, Dark Canyon Conglomerate and Price River Formation.

Approved by:   
Gil Hunt  
Associate Director

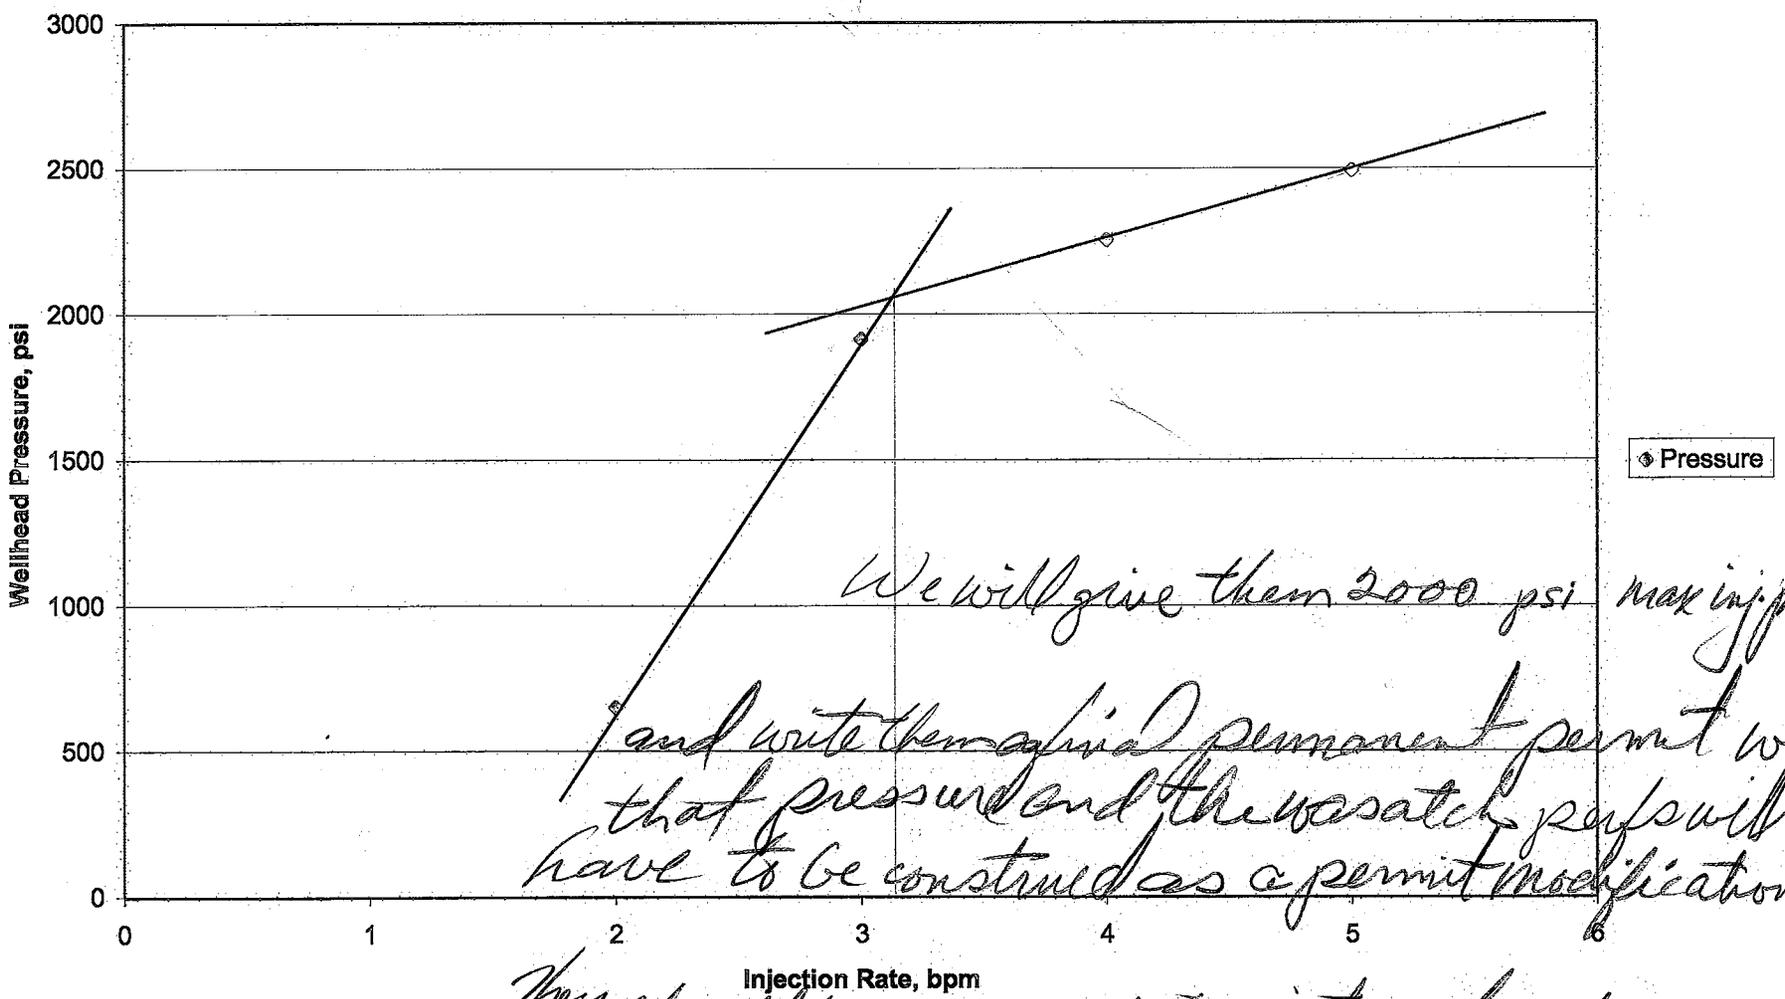

8-28-08  
Date

CK/js

cc: Dan Jackson, Environmental Protection Agency  
Bureau of Land Management, Price  
Carbon County Planning

Prickly Pear 12-24  
Step Rate Test August 30 2007

*We will give them 2000 psi max inj. pressure  
and write them a final permanent permit with  
that pressure and the watch regs will  
have to be construed as a permit modification.*

*They should have had 7 data point not just 5 or 6.*

**From:** Tracey Fallang <tfallang@billbarrettcorp.com>  
**To:** Chris Kierst <chriskierst@utah.gov>  
**Date:** 11/02/2008 2:00 PM  
**Subject:** Sundry for Amendment to UIC-338  
**Attachments:** SKMBT\_C35108110304280.pdf

Chris, as per our last discussion on this, I am attaching the sundry to amend our UIC permit. We would like to begin using this immediately so if we could get a verbal to proceed, I'd appreciate it. A hard copy will be sent via mail.

Subject: Re: Prickly Pear 12-24 SWD

Hi Tracey,

You do not need to re-Notice for this procedure. You do not have to perform a Step Rate Test (SRT) for the interval specified as Interval (Stage) #1 on the Table (4,500' to 4,518' TD) attached to the Sundry Notice dated 7/16/2008. This interval will be construed by DOGM to be covered under the existing Permitted Maximum Allowable Surface Pressure (2,000 psi). However, subsequent uphole zones in the middle Wasatch Formation, as listed on the cited attached Table, that may be proposed for perforation, will require SRT. You will need to submit a new Sundry Notice requesting permission to inject into the new middle Wasatch Formation perforations as a Permit Modification. If everything is acceptable on the Sundry Notice then Brad Hill will approve it and a copy will be returned. We can provide a verbal permission to proceed after receipt and approval of the new Sundry Notice if you feel it is warranted. Otherwise, normal documentation of approval will occur within a conventional postal delivery cycle. Please contact me if you have any questions (801) 538-5337 or chriskierst@utah.gov.

>>> Tracey Fallang <tfallang@billbarrettcorp.com> 09/09/2008 11:52 AM >>>  
Chris, we received the SWD permit, thank you. A couple of questions as we get closer to frac'ing that upper zone.

- 1) Because the original public notice dated April 23, 2007 included the Wasatch, will you need to re-notice or are we OK?
- 2) Once we perf and frac, what is the next process. Will we then need to complete another step-rate and provide you with those results and then amend the current permit?
- 3) I guess based on your answer for #2 above, how long will the approval take of the amended permit as the engineer in our office has concern about shutting the well in.

Thanks Chris!

Bill Barrett Corporation has completed perforating and fracing 6 stages in the Wasatch interval on the Prickly Pear 12-24 well from 4,518' to 3,482'. Enclosed are the treatment summary sheets and the treating pressure graphs from CalFrac for each stage. After drilling out the composite frac plugs, a Halliburton "PLS" packer was run on 2.375", 4.7#, N-80, EUE 8rd tubing and set at 3,400' leaving the Price River, Dark Canyon, North Horn and Wasatch intervals open for water disposal. The tubing, packer and casing were pressure tested to 1,500 psi and the chart for the MIT is enclosed.

On each of the six stages, BBC shut down pumping after seeing an initial breakdown and recorded the instant shutdown pressure (ISIP) for each stage. BBC also recorded the final ISIP at the end of each stage. The initial and the final ISIPs along with their corresponding frac gradients are shown in the enclosed "**Prickly Pear 12-24 Disposal Well**" graph. After plotting the frac gradients for each stage, the initial ISIP on stage 2 and both the initial and final ISIPs on stages 3 and 4 appear to be abnormally low compared to the other stages. BBC then looked at the frac gradients for the Wasatch intervals on the offsetting Prickly Pear 13-17D-12-15 pad and found the following results:

Well Name	Stage	Final Gradient psi/ft
Prickly Pear 12-17D	12	0.960
	13	0.960
	14	0.980
	15	1.020
	16	1.080
Prickly Pear 13-17D	11	0.970
	12	0.980
	13	0.960
Prickly Pear 14-17D	07	0.920
	08	1.050
Prickly Pear 16-18D	10	1.030
	11	1.110
	12	1.210

**SW/SW SECTION 24-T12S-R14E-W26M**

**CARBON COUNTY, UTAH**

**API #43-007-30953**

The gradients on the offset wells are very similar to the final gradients on stages 1, 2, 5 and 6 of the Prickly Pear 12-24 well and would further indicate that the frac gradients seen on stages 3 and 4 may not be right.

The Wasatch interval in the Prickly Pear area is an under-pressured reservoir with a pore pressure gradient of approximately 0.38 psi/ft. BBC fraced the Wasatch intervals with a water based fluid with a hydrostatic gradient of approximately 0.44 psi/ft. Stages 3 and 4 both appear to have very high permeability as seen in the high leak-off rate after final shut-down. The shut in casing pressure on stage 3 bled off to 0 psi in 11 minutes and on stage 4 bled off to 0 psi in 3 minutes. BBC believes the high leak-off rate in these two intervals may be a factor causing us to see lower ISIPs in these two intervals than what we would expect to see. BBC would contend that in these two intervals, we either (a.) were not pumping enough rate to overcome the leak-off into the formation and did not generate a significant fracture in the formation or (b.) as we started to step down rate at the end of the jobs, the leak-off was higher than the pump rate and the fractures closed before we got to the final shutdown.

After the packer was run and the MIT was performed, BBC set up two 500 bbl frac tanks and filled them with produced water from the Prickly Pear wells. BBC injected the 1,000 bbls of produced water into the Prickly Pear well to test the viability of the newly completed interval for injection and to try to get a step-rate test to establish a maximum surface injection pressure. The water was injected at 2,700 bbl/day with 0 psi surface injection pressure. The tubing went on a vacuum immediately after shut down further confirming the high permeability in some of the Wasatch intervals. Because the Prickly Pear 12-24 well took water at 0 psi surface injection pressure, BBC was not able to obtain a step-rate test and requests that the maximum allowable surface injection pressure be determined from the frac gradients recorded on the six Wasatch fracs.

The "**Prickly Pear 12-24 Disposal Well**" graph shows the Initial and Final Gradient trendlines for the six Wasatch fracs and show an initial frac gradient of approximately 0.68 psi/ft and a final frac gradient of approximately 0.88 psi/ft. The trendlines include data from stages 3 and 4 which BBC believes are too low as we normally don't see sections within an interval that have significantly lower frac gradients than the sections above and below them. BBC would propose to use the average of the Initial and Final trendlines or 0.78 psi/ft as the starting point for maximum allowable injection pressure on the Prickly Pear 12-24 disposal well. BBC believes that the actual frac gradient in this interval is closer to 0.95 to 1.0 psi/ft and is supported by the Final frac gradients on stages 1, 2, 5 and 6 as well as on the offset wells, so using 0.78 psi/ft as a starting point will allow a significant margin for error.

**Bill Barrett Corporation**

**PRICKLY PEAR FEDERAL 12-24-12-14**

**1,271' FSL & 483' FWL**

**SW/SW SECTION 24-T12S-R14E-W26M**

**CARBON COUNTY, UTAH**

**API #43-007-30953**

Using the following formula, *maximum surface injection pressure = (frac gradient – hydrostatic gradient of injected water) x depth of top interval*, and a frac gradient of 0.78 psi/ ft, maximum surface injection pressure =  $(0.78 \text{ psi/ft} - 0.433 \text{ psi/ft}) \times 3500' = 1,215 \text{ psi}$ . BBC would propose setting the initial maximum allowable surface injection pressure at **1,200 psi** with a rate of **3,000 bbl/day** on the **Prickly Pear 12-24-12-14 Disposal Well**. After BBC has been injecting into this well for a period of time, we would expect the reservoir pressure to increase along with the surface injection pressure. If the surface injection pressure starts to approach the maximum allowable pressure, BBC would perform a step-rate test on the well and submit a request for a change in maximum allowable surface treating pressure based on the results of the step-rate test.

FORM APPROVED  
OMB No. 1004-0137  
Expires: March 31, 2007

**SUNDRY NOTICES AND REPORTS ON WELLS**

*Do not use this form for proposals to drill or to re-enter an abandoned well. Use Form 3160-3 (APD) for such proposals.*

**SUBMIT IN TRIPLICATE- Other instructions on reverse side.**

1. Type of Well  
 Oil Well  Gas Well  Other

2. Name of Operator **BILL BARRETT CORPORATION**

3a. Address  
**1099 18th Street Suite 2300 Denver CO 80202**

3b. Phone No. (include area code)  
**303 312-8134**

4. Location of Well (Footage, Sec., T., R., M., or Survey Description)  
**SWSW, 1271' FSL, 483' FWL, Section 24-T12S-R14E S.L.B.&M.**

5. Lease Serial No.  
**UTU-77513**

6. If Indian, Allottee or Tribe Name  
**n/a**

7. If Unit or CA/Agreement, Name and/or No.  
**Prickly Pear / UTU-79487**

8. Well Name and No.  
**Prickly Pear Unit Fed 12-24**

9. API Well No.  
**43-007-30953**

10. Field and Pool, or Exploratory Area

11. County or Parish, State  
**Carbon County, Utah**

**12. CHECK APPROPRIATE BOX(ES) TO INDICATE NATURE OF NOTICE, REPORT, OR OTHER DATA**

TYPE OF SUBMISSION	TYPE OF ACTION

	<input type="checkbox"/> Convert to Injection	<input type="checkbox"/> Plug Back	<input type="checkbox"/> Water Disposal	

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

**This sundry is being submitted to request that additional tanks be added to this location due to the conversion to a disposal well. A diagram indicating the proposed layout and number/size of tanks is attached. A revised site security will be submitted upon completion of the reconfiguration.**

Accepted by the  
Utah Division of  
Oil, Gas and Mining

12. DESCRIBE PROPOSED OR COMPLETED OPERATIONS. Clearly show all pertinent details including dates, depths, volumes, etc.

A MIT was conducted on the Prickly Pear Unit Federal 12-24-12-15, as required every 5 years on the annulus of the 5-1/2" casing and 2-3/8" tubing. Pressure testing the Annulus to 1,060 psig for 30 minutes. No pressure bleed off was observed and it is concluded that this wellbore and it's casing does in fact have integrity. Therefore, all underground sources of drinking water remain protected. This well has no risk to public health, safety, or environment. See attached copy of the MIT performed on 8/13/13. BBC contacted UDOGM's Dennis Ingram but he did not attend the test. Based on the results, BBC will continue to use this well as an injection well and conduct another MIT in five years.

**Accepted by the  
Utah Division of  
Oil, Gas and Mining**

**Date:** August 21, 2013

### Company Information

Company Name: Bill Barrett Corp  
Engineer:  
Phone:  
Email:  
Service Company: Delsco Northwest Inc.

### Well Information

Well Name: PrPr 12 24 12 15  
Well Location: well location  
Field / Pool: West Tavaputts  
Status: Injection

### Test Information

Type of Test: test type  
Test Date: 2013/08/13 11:00:00  
Job Number: 1  
Tool Serial Number: SH50472  
Tool Offset from End of Tool String:  
Run Depth at Tool Pressure Port:

### Test Results

Maximum Pressure Reading: 1632.267  
Maximum Temperature Reading: 81.848  
Gradient Survey Information  
Extrapolated Pressure to MPP:  
Final Gradient Depth:

---

### **Tool Information**

Tool Serial Number: SH50472  
Tool Type:  
Calibration Date:  
Pressure:  
Pressure Rating:  
Temperature:  
Temperature Rating:

### **Program Details**

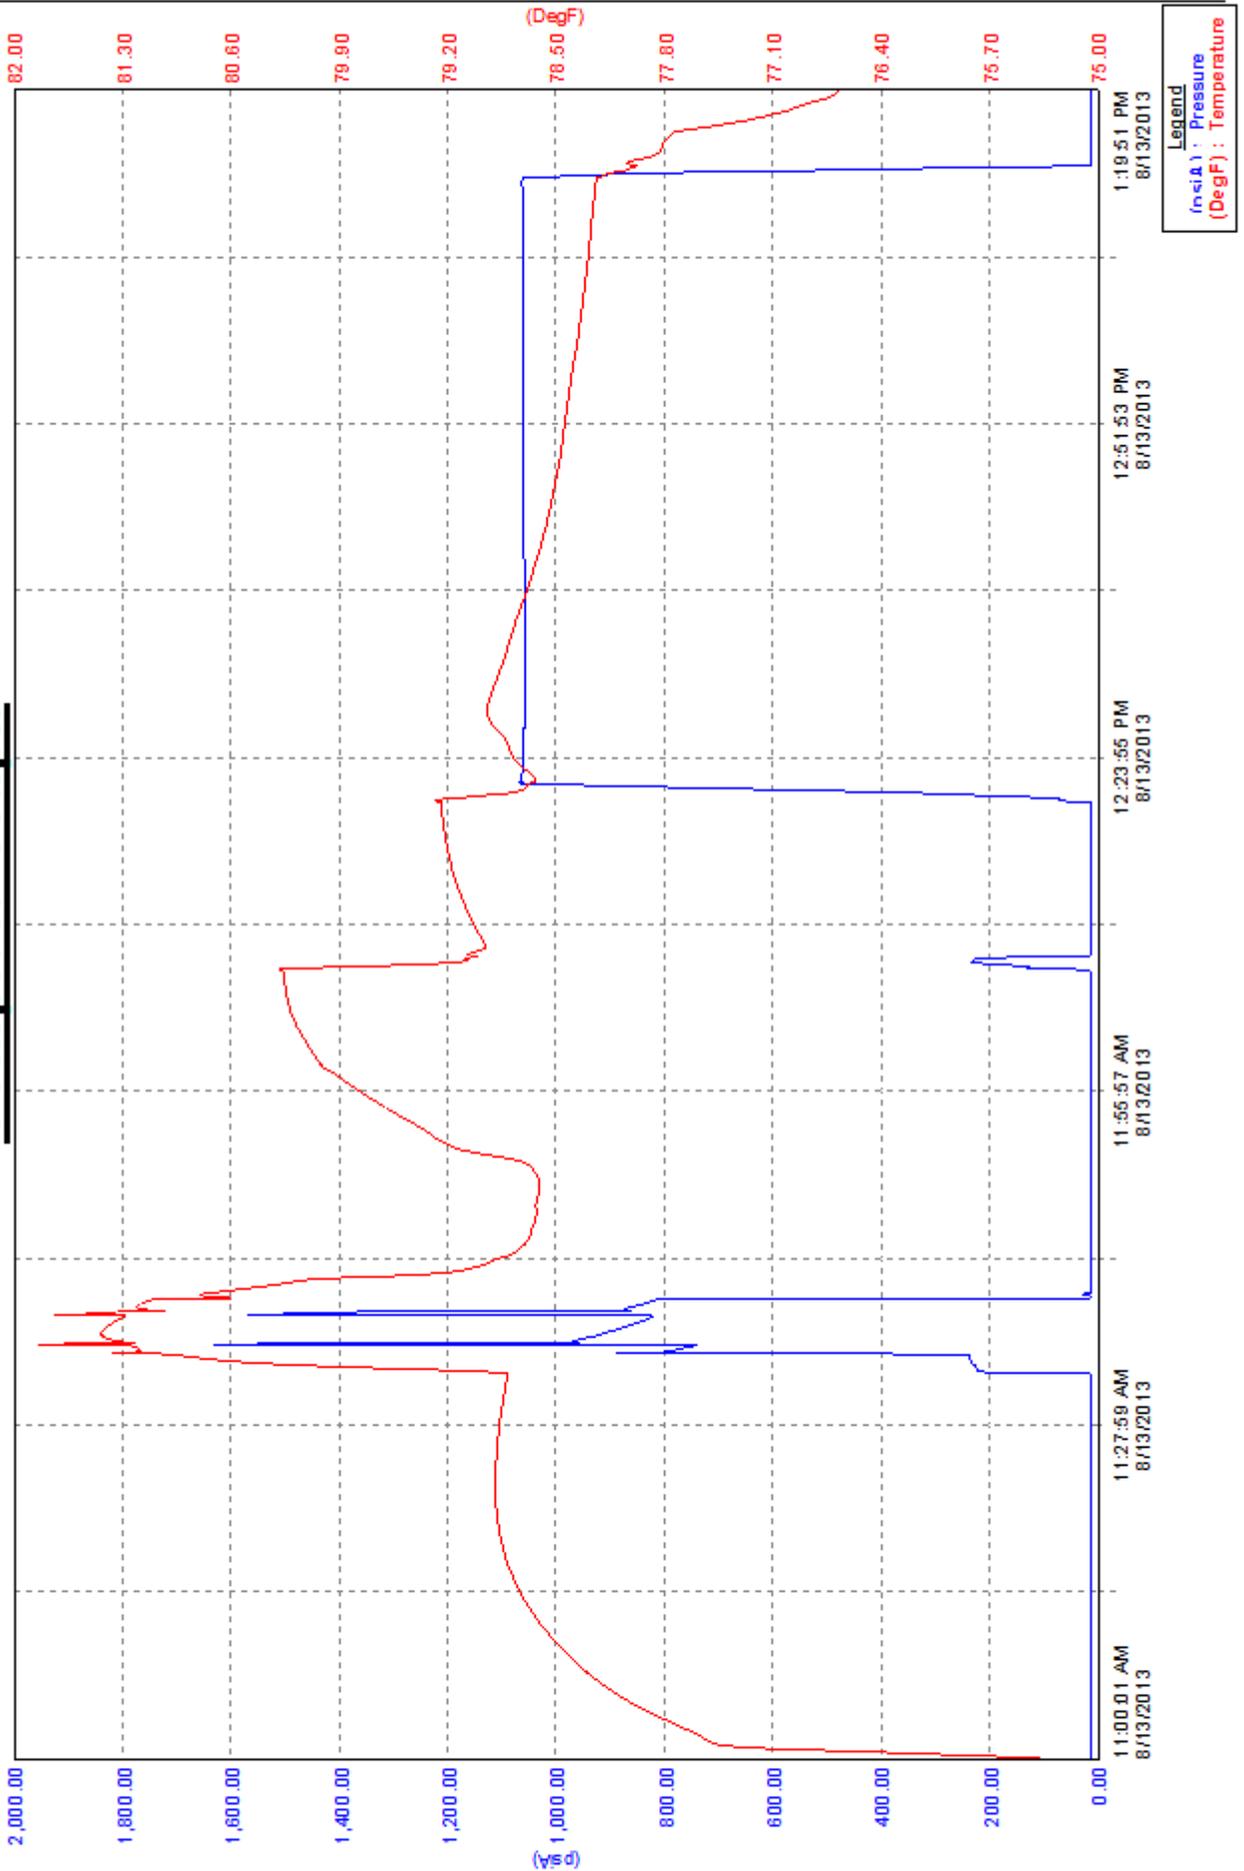

<u>Step</u>	<u>Sample Rate</u>	<u>Interval</u>	<u>Comments</u>
0	1 Str_sec	32 Str_seconds	Initial sample burst

Start Time: 2013/08/13 11:00:00  
End Time: 2013/08/13 13:19:51  
Number of Samples: 8391

Re: Automatic Contraction  
Prickly Pear Unit  
Carbon County, Utah

Dear Mr. Mulverhill:

Your letter of August 2, 2013, describes the lands automatically eliminated effective December 31, 2012, from the Prickly Pear Unit Area, located in Carbon County, Utah, pursuant to Section 2(e) of the unit agreement and requests our concurrence. The lands you have described contain 18,487.90 acres more or less, and constitute all legal subdivisions, no parts of which are included in the Prickly Pear Wasatch Mesaverde Participating Area "A-E" and the Prickly Pear Wasatch Mesaverde Participating Area "F". As a result of the automatic contraction, the unit is reduced to 7,139.77 acres.

The following Federal Leases are entirely eliminated from the unit area:

UTU01519B	UTU73671	UTU89234
UTU013064	UTU74388	
UTU15254	UTU75035	
UTU65776	UTU76713*	
UTU69095	UTU77059	
UTU69096	UTU77060	
UTU72054	UTU77513	
UTU73666	UTU79004	

\*Indicates non-committed lease

The following Federal Leases are partially eliminated from the unit area:

UTU0137844	UTU73006	UTU73669	UTU74386
UTU11604	UTU73665	UTU73670	
UTU65773	UTU73668	UTU73896	

You have complied with the requirements of Section 2(e), provided you promptly notify all interested parties. If you have any questions, please contact Judy Nordstrom of this office at (801) 539-4108.

Sincerely,

Roger L. Bankert

**OPERATOR CHANGES DOCUMENTATION**

Enter date after each listed item is completed

- (R649-8-10) Sundry or legal documentation was received from the **FORMER** operator on: 1/7/2014
- (R649-8-10) Sundry or legal documentation was received from the **NEW** operator on: 1/7/2014
- The new company was checked on the **Department of Commerce, Division of Corporations Database** on: 1/28/2014
- a. Is the new operator registered in the State of Utah:        Business Number: 8850806-0161
- a. (R649-9-2) Waste Management Plan has been received on: Not Yet
- b. Inspections of LA PA state/fee well sites complete on: Yes
- c. Reports current for Production/Disposition & Sundries on: 1/24/2014
- Federal and Indian Lease Wells:** The BLM and or the BIA has approved the merger, name change, or operator change for all wells listed on Federal or Indian leases on: BLM Not Yet BIA N/A
- Federal and Indian Units:**  
 The BLM or BIA has approved the successor of unit operator for wells listed on: N/A
- Federal and Indian Communization Agreements ("CA"):**  
 The BLM or BIA has approved the operator for all wells listed within a CA on: N/A
- Underground Injection Control ("UIC")** Division has approved UIC Form 5 Transfer of Authority to **Inject**, for the enhanced/secondary recovery unit/project for the water disposal well(s) listed on: Yes

**DATA ENTRY:**

- Changes entered in the **Oil and Gas Database** on: 1/28/2014
- Changes have been entered on the **Monthly Operator Change Spread Sheet** on: 1/28/2014
- Bond information entered in RBDMS on: 1/28/2014
- Fee/State wells attached to bond in RBDMS on: 1/28/2014
- Injection Projects to new operator in RBDMS on: 1/28/2014
- Receipt of Acceptance of Drilling Procedures for APD/New on: 1/7/2014
- Surface Agreement Sundry from **NEW** operator on Fee Surface wells received on: 1/7/2014

**BOND VERIFICATION:**

- Federal well(s) covered by Bond Number: RLB7886
- Indian well(s) covered by Bond Number: RLB7886
- a. (R649-3-1) The **NEW** operator of any state/fee well(s) listed covered by Bond Number B008371
- b. The **FORMER** operator has requested a release of liability from their bond on: N/A

**LEASE INTEREST OWNER NOTIFICATION:**

- (R649-2-10) The **NEW** operator of the fee wells has been contacted and informed by a letter from the Division of their responsibility to notify all interest owners of this change on: 1/28/2014

**COMMENTS:**

Lisha,

Here's In-Lieu List 116. The lands you're interested in appear about 2/3 of the way down on the fourth page of the scan. Thanks for keeping up on this.

Subject: Enervest Operating - Prickly Pear U Fed 12-24/43-007-30953

To: "Jim Davis (SITLA)" &lt;jimdavis@utah.gov&gt;

Hi Jim,

In July you sent me an email confirming that SITLA is the surface owner of the above referenced well eff. 11/2/1923 by the actions of In-Lieu Selection List #116; please send me a copy so that DOGM can officially change the surface owner from Fed to State. Also, see attached inspections & recent insp pics. If you have any questions or concerns please call. Still waiting on updated info from Enervest regarding cleanup, will notify you when I get it ok.

Thanks,  
Lisha

DEPARTMENT OF THE INTERIOR  
GENERAL LAND OFFICE

Washington, D. C., October 19, 1923.

This certifies that the tracts of land described in the foregoing list have been carefully examined and compared with the township plats and tract books in this office and the same have been found to inure to the State of Utah under its grant for the purpose stated, being free from conflicts or other adverse claims of record. All of the selected lands are embraced in coal, oil and gas, or phosphate withdrawals or reserves, as shown on the face of the list. Some of the lands which are withdrawn for coal have been classified as coal lands at a stated price. All of the withdrawals and reserves were made prior to date of selection of the lands. The State has consented in writing to take title to all of such selected lands with reservation to the United States of all of the mineral deposits therein for which they have been withdrawn, classified, or reserved, in accord with the acts of June 22, 1910 (36 Stat., 583) as supplemented by the act of April 30, 1912 (37 Stat., 105), and July 17, 1914 (38 Stat., 509), as the case may be. The selected lands are not embraced in any other withdrawal or reservation in so far as the records of this office show. The records here do not indicate that any of the selected lands are valuable for minerals other than those above specified. The Geological Survey has reported that the records of that office indicate that the selected lands contain no valuable deposits of mineral other than that for which they have been withdrawn or reserved.

APPROVED:

*(Signed) F. P. ...*  
Chief, Division "G".

*(Signed) ...*  
Examiner

DEPARTMENT OF THE INTERIOR  
GENERAL LAND OFFICE

Washington, D. C. *November 1, 1923.*

It is hereby certified that the tracts of land described in this list, No. 1K5, are embraced in the original lists on file in this office of lands selected by the State of Utah, pursuant to the laws of that State, in the Salt Lake City land district, as indemnity for losses in the sections and townships named, which school land indemnity selections are authorized by the acts of Congress cited.

It is further certified that the lands reported lost or deficient in said list and those selected in lieu thereof have been examined and compared with the township plats and tract books in this office; that the indemnity lands claimed have been found to be properly due the townships for which they were selected and the selected lands are shown to be subject to such selection being public lands within the limits of said State, free from adverse claims of record. It is disclosed by the records of this office, as indicated on the face of this list, that all of the selected lands have been withdrawn, classified or reserved as coal lands or as valuable for oil, gas or phosphate. All of the lands are still so withdrawn, classified or reserved. The State has filed written waiver of all its claim or right to the coal, oil, gas or phosphate in the lands and has consented to take title to such lands in accord with the acts of June 22, 1910 (36 Stat., 583) and July 17, 1914 (38 Stat., 509), as the case may be.

It is, therefore, recommended that the selections in this list, embracing 8,643.68 acres, be approved subject to any valid interfering rights existing at date of selection, but, as shown on the face of the list, excepting and reserving to the United States all the coal, oil, gas and phosphate in the selected lands, and to the United States or persons authorized by the United States the right to prospect for, mine and remove the coal, oil, gas or phosphate from the same, upon compliance with the conditions and subject to the provisions, and limitations of the act of Congress approved June 22, 1910 (as to coal) and July 17, 1914 (as to oil, gas and phosphate), supra, and excepting and reserving to the United States rights of way over and across the said selected lands for ditches or canals constructed by authority of the United States, all as directed and required by the act of Congress approved August 30, 1890 (26 Stat., 391).

(Signed) William Story  
Commissioner

DEPARTMENT OF THE INTERIOR  
OFFICE OF THE SECRETARY

Washington, D. C., November 2, 1923

The foregoing selections embracing 8,643.68 acres, are hereby approved subject to any valid interfering rights existing at date of selection, but, as shown on the face of the list, excepting and reserving to the United States all the coal, oil, gas or phosphate in the selected lands and to the United States or persons authorized by the United States, the right to prospect for, mine and remove from such lands, the deposits of mineral for which they have been withdrawn, classified or reserved, upon compliance with the conditions and subject to the provisions and limitations of the acts of Congress approved June 22, 1910 (36 Stat., 583) and July 17, 1914 (36 Stat., 509), and excepting and reserving to the United States rights of way over and across said selected lands for ditches or canals constructed by authority of the United States, all as directed and required by the act of Congress approved August 30, 1890 (26 Stat., 391).

Notified of a 380 barrel production water spill or leak on this well pad, most of which remained in the bermed area although some fluid did leave location and puddle off the northwest side of the production tanks. This location is a **SITLA** surface and a **Federal mineral**, therefore Sitla was notified on July 3, 2014. The operator did supply three small images of the spill and the Division took images on the inspection today, photos are in file.
