Re: Federal APD / Forest Service

Attached please find one (1) copy of an *Application for Permit to Drill* on the location **Federal 6-2-65**.

Right-of-way applications were submitted to the Bureau of Indian Affairs and the Ute Indian Tribe for access from Tribal grounds to Forest Service boundary. If you have any questions regarding this "APD" please call our office at (435) 722-1325.

Thank you,

Debbie L. Wisener  
Production & Regulatory Technician

Duchesne County, Utah

ONSHORE ORDER NO. 1

MULTI POINT SURFACE USE & OPERATIONS PLAN

**1 Existing Roads**

To reach the Berry Petroleum Company, Federal 6-2-65 location, in Section 2-T6S-R5W:

Start in Myton, Utah. Proceed west on US Highway 40, 8.8 miles to the Antelope Creek/Sowers Canyon Road at the Bridgeland turnoff. Turn south and proceed 10.1 miles to the Brundage Canyon Road. Turn south on the Brundage Canyon road and proceed west 6.7 miles to the Federal wells access road. Turn south and proceed 0.9 miles to Federal 6-2-65.

The existing oilfield service road may need some surface material to prevent or repair holes in the road due to heavy truck traffic during the drilling and completion operation. If repairs are made the operator will secure material from private sources.

Please see the attached map for additional details.

**2 Planned Access Road**

See Topographic Map "B" for the location of the proposed access road.

On National Forest Service (NFS) lands, access roads will be constructed according to the specifications contained in the Code of Federal Regulations, including Title 36, Chapter II.

Surface disturbance and vehicular traffic will be limited to the approved location and approved access route. Any additional area needed will be approved in advance.

Access roads and surface disturbing activities will conform to standards outlined in the BLM and Forest Service publication, Surface Operating Standards for Oil and Gas Exploration and Development, Third Edition, 1989.

New access roads will be crowned (2 to 3%), ditched, and constructed with a running surface of 18 feet and a maximum disturbed width of 32 feet. Graveling or capping the roadbed will be performed as necessary to provide a well constructed, safe road. Prior to construction or upgrading, the proposed road shall be cleared of any snow and shall be allowed to dry completely.

The disturbed width needed may be wider than 32 feet to accommodate larger equipment where deep cuts are required for road construction; intersections or sharp curves occur; or, as proposed by the operator. Approval will be required from the Forest Supervisor, Vernal, Utah (FS).

Berry Petroleum Company

Appropriate water control structures will be installed to control erosion.

Unless otherwise specified, the following specifications will apply:

The maximum grade will be less than 10%.

There will be no turnouts.

There will be no major cuts and fills, culverts, or bridges. If it becomes necessary to install a culvert at some time after approval of the APD, the operator will request approval from the FS.

The access road will be centerline flagged during time of staking.

There will be no gates, cattle guards, fence cuts, or modifications to existing facilities without prior consent by the FS.

Surfacing material may be necessary, depending upon weather conditions.

The road surface and shoulders will be kept in a safe and usable condition and will be maintained in accordance with the original construction standards. All drainage ditches and culverts will be kept clear and free flowing and will be maintained according to the original construction standards. The access road ROW will be kept free of trash during operations. All traffic will be confined to the approved running surface. Road drainage crossings shall be of the typical dry creek drainage crossing type. Crossings shall be designed so they will not cause siltation or accumulation of debris in the drainage crossing, nor shall the drainages be blocked by the roadbed. Erosion of drainage ditches by runoff water shall be prevented by diverting water off at frequent intervals by means of cutouts. Should mud holes develop, the holes shall be filled in and detours around the holes avoided. When snow is removed from the road during the winter months, the snow should be pushed outside the borrow ditches, and the turnouts kept clear so that snowmelt will be channeled away from the road.

### **3 Location of Existing Wells**

See Topographic Map "C" for the location of existing wells within a 1 mile radius.

### **4 Location of Tank Batteries, Production Facilities and Production Gathering and Service Lines**

The following guidelines will apply if the well is productive:

All permanent (on site for six months or longer) structures constructed or installed will be painted a flat, non-reflective, earth tone color to match one of the standard environmental colors, as determined by the five state Rocky Mountain Inter-Agency Committee. All facilities will be painted within six months of installation. Facilities required to comply with the Occupational Safety and Health Act (OSHA) will be excluded. The required paint color is desert brown (10YR 6/4) unless otherwise designated by the Authorized Officer.

A containment dike will be constructed completely around those production facilities which contain fluids (i.e., production tanks, produced water tanks). This dike will be constructed of compacted subsoil, be impervious, hold 100% of the capacity of the largest tank, and be independent of the back cut. Additional capacity, if such is needed due to environmental concerns, will be addressed on a as needed basis. The use of topsoil for the construction of dikes will not be allowed. If a Spill Prevention, Control, and Countermeasure (SPCC) Plan is required by the Environmental Protection Agency, the containment dike may be expanded with the BLM/VFO Authorized Officer's approval to meet SPCC requirements.

A description of the proposed pipeline and a map illustrating the proposed route is submitted with this APD.

All site security guidelines identified in Federal regulation 43 CFR 3126.7, will be adhered to. All off-lease storage, off-lease measurement, or commingling on-lease or off-lease production will have prior written approval from the BLM/VFO Authorized Officer.

Gas meter runs will be located approximately 100 feet from the wellhead. The gas line will be buried, or anchored down from the wellhead to the meter. Meter runs will be housed and/or fenced.

**5 Location and Type of Water Supply**

Water for the drilling and completion will be pumped or trucked from the Berry source wells located in Sec. 23, T5S, R5W or Sec. 24, T5S, R5W, permit # 43-11041, or from East Duchesne Water, Arcadia Feedlot, Sec. 28, T3S, R3W or from Petroglyph Operating Company 08-04 Waterplant, Sec. 8, T5S, R3W or from Kenneth V. & Barbara U. Richens source well located in Sec. 34, T3S, R2W, permit # 43-1723 or Leo Foy source well located in Sec. 34, T5S, R5W, permit # 43-11324. A water use agreement is also in place with the Ute Tribe.

**6 Source of Construction Materials**

All construction materials for this location site and access road shall be borrow material accumulated during construction of the location site and access road.

Additional gravel or pit lining material will be obtained from a private source.

The use of materials under BLM jurisdiction will conform to 43 CFR 3610.2-3.

**7 Methods of Handling Waste Materials**

Drill cuttings will be contained and buried in the reserve pit.

Drilling fluids, including salts and chemicals, will be contained in the reserve pit. Upon termination of drilling and completion operations, the liquid contents of the reserve pit will be used at the next drill site or will be removed and disposed of at an approved waste disposal facility within 180 days after drilling is terminated. Immediately upon well completion, any hydrocarbons in the pit shall be removed in accordance with 43 CFR 3162.7-1.

Unless specified in the site specific APD, the reserve pit will be constructed on the location and will not be located within natural drainages, where a flood hazard exists or surface runoff will destroy or damage the pit walls. The reserve pit will be constructed so that it will not leak, break, or allow discharge of liquids.

If it is determined at the onsite that a pit liner is necessary, the reserve pit will be lined with a synthetic reinforced liner a minimum of 12 millimeters thick, with sufficient bedding used to cover any rocks. The liner will overlap the pit walls and be covered with dirt and/or rocks to hold it in place. Trash or scrap that could puncture the liner will not be disposed of in the pit.

Reserve pit leaks are considered an unacceptable and undesirable event and will be orally reported to the Authorized Officer.

After first production, produced wastewater will be confined to the approved pit or storage tank for a period not to exceed 90 days. During the 90-day period, in accordance with Onshore Order No. 7, an application for approval of a permanent disposal method and location will be submitted for the Authorized Officer's approval.

All production fluids will be disposed of at approved disposal sites. Produced water, oil, and other byproducts will not be applied to roads or well pads for control of dust or weeds. The indiscriminate dumping of produced fluids on roads, well sites, or other areas will not be allowed.

Any spills of oil, gas, salt water, or other noxious fluids will be immediately cleaned up and removed to an approved disposal site.

A chemical portable toilet will be furnished with the drilling rig.

Garbage, trash, and other waste materials will be collected in a portable, self-contained, fully enclosed trash cage during operations. Trash will not be burned on location.

All debris and other waste materials not contained in the trash cage will be cleaned up and removed from the location immediately after removal of the drilling rig.

Any open pits will be fenced during the operations. The fencing will be maintained until such time as the pits are backfilled.

No chemicals subject to reporting under SARA Title III (hazardous materials) in an amount equal to or greater than 10,000 pounds will be used, produced, stored, transported, or disposed of annually in association with the drilling, testing, or completing of wells. Furthermore, extremely hazardous substances, as defined in 40 CFR 355, in threshold planning quantities, will not be used, produced, stored, transported, or disposed of in association with the drilling, testing, or completing of wells within these areas.

**8 Ancillary Facilities**

There are no ancillary facilities planned for at this time and none are foreseen in the future.

**9 Wellsite Layout**

The attached Location Layout diagram describes drill pad cross-sections, cuts and fills, and locations of the mud tanks, reserve pit, pipe racks, trailer parking, spoil dirt stockpile(s) and surface material stockpile(s)

The diagram will describe rig orientation, parking areas, and access roads as well as the location of the following:

The reserve pit.

The stockpiled topsoil, which shall not be used for facility berms. All brush removed from the well pad during construction will be stockpiled with the topsoil.

The flare pit, which will be located downwind from the prevailing wind direction.

The access road.

All pits will be fenced according to the following minimum standards:

39-inch net wire shall be used with at least one strand of wire on top of the net wire. Barbed wire is not necessary if pipe or some type of reinforcement rod is attached to the top of the entire fence.

The net wire shall be no more than two inches above the ground. The barbed wire shall be three inches over the net wire. Total height of the fence shall be at least 42 inches.

Corner posts shall be cemented and/or braced in such a manner as to keep the fence tight at all times.

Standard steel, wood, or pipe posts shall be used between the corner braces. Distance between any two posts shall be no greater than 16 feet.

All wire shall be stretched using a stretching device before it is attached to the corner posts.

The reserve pit fencing will be on two sides during drilling operations and on the third and fourth sides when the rig moves off location. Pits will be fenced and maintained until cleanup.

**10 Plans for Restoration of the Surface**

The dirt contractor will be provided with approved copies of the Surface Use Plan and these Standard Operating Procedures prior to construction activities.

Immediately upon well completion, the location and surrounding area will be cleared of all unused tubing, materials, trash, and debris not required for production.

On lands administered by the BLM, abandoned well sites, roads, and other disturbed areas will be restored as near as practical to their original condition. Where applicable, these conditions may include the re-establishment of irrigation systems, the re-establishment of appropriate soil conditions, and the re-establishment of vegetation as specified.

All disturbed areas will be re-contoured to the approximate natural contours.

Any drainage rerouted during the construction activities shall be restored to its original line of flow or as near as possible.

Prior to backfilling the reserve pit, the fence surrounding the reserve pit will be removed. The pit liner will be cut off at the water or mud line and disposed of at an approved landfill site. The liner will also be torn and perforated after the pit dries and prior to backfilling the reserve pit.

Before any dirt work associated with reserve pit restoration takes place, the reserve pit shall be as dry as possible. All debris in it will be removed. Other waste and spoil materials will be disposed of immediately upon completion of operations. The reserve pit will be reclaimed within 180 days from the date of well completion, weather permitting. Once reclamation activities have begun, the activities will be completed within 30 days.

After the reserve pit has been reclaimed, no depressions in the soil covering the reserve pit will be allowed. The object is to keep seasonal rainfall and runoff from seeping into the soil used to cover the reserve pit. Diversion ditches and water bars will be used to divert runoff as needed.

Prior to the construction of the location, the top 12 inches of soil material will be stripped and stockpiled. Placement of the topsoil will be noted on the location plat attached to the site specific APD. Topsoil shall be stockpiled separately from subsoil materials. Topsoil salvaged from the reserve pit shall be stockpiled separately near the reserve pit. When all drilling and completion activities have been completed, the unused portion of the location (area outside the deadmen) will be re-contoured and topsoil spread over the area.

Topsoil to be stored for more than one year:

Shall be windrowed, where possible, to a depth of three (3) to four (4) feet at a specified location near the margin of the site.

Shall be broadcast seeded with the prescribed seed mixture immediately after windrowing. The Authorized Officer of the appropriate surface management agency shall be contacted for the required seed mixture. Seed will be drilled on the contour to an appropriate depth.

The stockpile then "walked" with a dozer to cover the seed.

Mulching may be one method considered to enhance the re-establishment of desired native plant communities. If straw or hay mulch is used, the straw and hay must be certified to be weed-free and the documentation submitted prior to usage.

When restoration activities have been completed, the location site and new access road cuts and shoulders shall be reseeded. Prior to reseeding, all disturbed areas, including the old access road will be scarified and left with a rough surface.

The Authorized Officer or the appropriate surface management agency shall be contacted for the required seed mixture. Seed will be drilled on the contour to an appropriate depth.

If broadcast seeded, the amount of seed mixture per acre will be doubled, and a harrow or some other implement will be dragged over the seeded area to assure coverage of the seeds.

For BLM administered surface, at final abandonment, all casing shall be cut off at the base of the cellar or 3 feet below final restored ground level, whichever is deeper, and cap the casing with a metal plate a minimum of 0.25 inches thick. The cap will be welded in place and the well location and identity will be permanently inscribed on the cap. The cap also will be constructed with a weep hole.

**11 Surface Ownership**

United States Forest Service

**12 Other information**

All lease and/or unit operations will be conducted in such a manner that full compliance is made with all applicable laws, regulations, Onshore Oil and Gas Orders, the approved Plan of Operations, and any applicable Notice to Lessees. The operator is fully responsible for the actions of his subcontractors. A copy of these conditions will be furnished to the field representative to ensure compliance.

The operator will control noxious weeds along access road use authorizations, pipeline route authorizations, well sites or other applicable facilities. A list of noxious weeds may be obtained from the BLM or the appropriate County Extension Office. On NFS administered land, it is required that a Pesticide Use Proposal be submitted and approved prior to the application of herbicides or other pesticides or possibly hazardous chemicals.

Drilling rigs and/or equipment used during drilling operations on this location will not be stacked or stored on NFS administered lands after the conclusion of drilling operations or at any other time without authorization by the FS. If authorization is obtained, such storage is only a temporary measure.

Travel is restricted only to approved travel routes.

Unless previously conducted, a class III archaeological survey will be conducted on all Federal and/or Tribal lands. All personnel will refrain from collecting artifacts and from disturbing any significant cultural resources in the area. The operator is responsible for informing all persons in the area who are associated with this project that they may be subject to prosecution for knowingly disturbing historic or archaeological sites or for collecting artifacts. All vehicular traffic, personnel movement, construction, and restoration activities shall be confined to the areas examined, as referenced in the archaeological report, and to the existing roadways and/or evaluated access routes. If historic or archaeological materials are uncovered during construction, the Operator is to immediately stop work that might further disturb such materials and contact the Authorized Officer.

Within five working days, the Authorized Officer will inform the operator as to:

Whether the materials appear eligible for the National Historic Register of Historic Places;

The mitigation measures the operator will likely have to undertake before the site can be used (assuming in-situ preservation is not necessary); and,

The time frame for the Authorized Officer to complete an expedited review under 36 CFR 800.11 to confirm, through the State Historic Preservation Officer, that the findings of the Authorized Officer are correct and that the mitigation measures are appropriate.

If the operator wishes, at any time, to relocate activities to avoid the expense of mitigation and/or the delays associated with this process, the Authorized Officer and/or the surface owner will assume responsibility for whatever recordation and stabilization of the exposed materials may be required. Otherwise the operator will be responsible for mitigation costs. The Authorized Officer and/or the surface owner will provide technical and procedural guidelines for the conduct of mitigation. Upon verification from the Authorized Officer that required mitigation has been completed, the Operator will then be allowed to resume construction.

Berry Petroleum Company  
Multi Point Surface Use & Operations Plan  
Federal 6-2-65  
Duchesne County, Utah  
Page Nine

On surface administered by the NFS, all surface use will be conducted in accordance with the STIPULATION FOR LANDS OF THE NATIONAL FOREST SYSTEM UNDER JURISDICTION OF THE DEPARTMENT OF AGRICULTURE, including:

If the surface is owned by another entity (FEE OWNER) and the mineral rights are owned by the BLM, a right-of-way will be obtained from the other entity.

Operator's employees, including subcontractors, will not gather firewood along roads constructed by the operator.

All roads constructed by the operator will have appropriate signs. Signs will be neat and of sound construction. The sign will state: (a) that the land is located within the Ashley National Forest boundary (b) the name of the Operator, (c) that firearms are prohibited, (d) only authorized personnel are permitted.

All well site locations will have appropriate signs indicating the name of the operator, the lease serial number, the well name and number, the survey description of the well (either footages or the quarter/quarter section; the section, township, and range).

13 Lessees or Operator's Representative and Certification

A) Representative

NAME: Debbie L. Wisener  
ADDRESS: Berry Petroleum Company  
1614 South 2000 West  
Route 3, Box 3020  
Roosevelt, Utah 84066  
PHONE: 435-722-1325

All lease and/or unit operations will be conducted in such a manner that full compliance is made with all applicable laws, regulations and onshore oil and gas orders. The operator is fully responsible for the actions of its subcontractors. A copy of these conditions will be furnished to the field representative to ensure compliance.

The drilling permit will be valid for a period of one year from the date of approval. After permit termination, a new application will be filed for approval for any future operations.

B) Certification:

I hereby certify that I, or persons under my direct supervision, have inspected the proposed drillsite and access route; that I am familiar with the conditions which presently exist; that the statements made in this plan are, to the best of my knowledge and belief, true and correct; and that the work associated with the operations proposed herein will be performed by Berry Petroleum Company and its contractors and subcontractors in conformity with this plan and the terms and conditions under which it is approved. This statement is subject to the provisions of 18 U.S.C. 1001 for the filing of a false statement.

Utah Project # U-01-AY-0060(f,i)

July 10, 2001

## Introduction

An Independent Archaeologist (AIA) was contacted by a representative of Barrett Resources Corporation, to conduct a cultural resources investigation of eight proposed Federal wells, their access and pipeline (Table 1).

Well	Section	Township and Range	Footage
Fed. 2-2-65	Sec. 2 NW/NE 1/4	T6S,R5W	Alt #1, 613 FNL, 2102 FEL
Fed. 6-2-65	Sec. 2 SE/NW 1/4	T6S,R5W	Req. Loc., 1980 FNL, 1980 FWL
Fed. 8-2-65	Sec. 2 SE/NE 1/4	T6S,R5W	Alt #1, 1880 FNL, 1868 FEL
Fed. 10-2-65	Sec. 2 NW/SE 1/4	T6S,R5W	Alt #1, 2149 FSL, 2156 FEL
Fed. 2-1-65	Sec. 1 NW/NE 1/4	T6S,R5W	Alt #1, 849 FNL, 1953 FEL
Fed. 4-1-65	Sec. 1 NW/NW 1/4	T6S,R5W	Alt #1, 545 FNL, 484 FWL
Fed. 6-1-65	Sec. 1 SE/NW 1/4	T6S,R5W	Alt #1, 2942 FNL, 2152 FWL
Fed. 8-2-65	Sec. 1 SE/NE 1/4	T6S,R5W	Alt #1, 1803 FNL, 688 FEL

The above mentioned proposed Federal wells are located in Sections 1 and 2 of T6S, R5W, Duchesne County, Utah (Figure 1). From the Ute Tribal #8-35-55 well access, the proposed access and pipeline trends 2500 feet (762.2 m) south to the USFS and Ute Tribal boundary. The remainder access and pipelines, as well as the well locations, are located on USFS lands.

Ninety-four percent of the area surveyed, 175.4 acres (80 block, 95.4 linear), was surveyed on USFS land. Fieldwork was authorized through a U.S. Department of Agriculture, Forest Service, Special Use Permit (DCN900801).

Six percent of the area surveyed, 11.48 linear acres, was surveyed on Uintah-Ouray Ute tribal lands. Fieldwork was authorized through an access permit issued by the Energy and Minerals Resource Division of the Uintah-Ouray Ute tribe.

A total of 186.94 acres was surveyed on June 1 and 2, 2001 by AIA archaeologist James Truesdale. All the field notes and maps are located in the AIA office in Laramie, Wyoming.

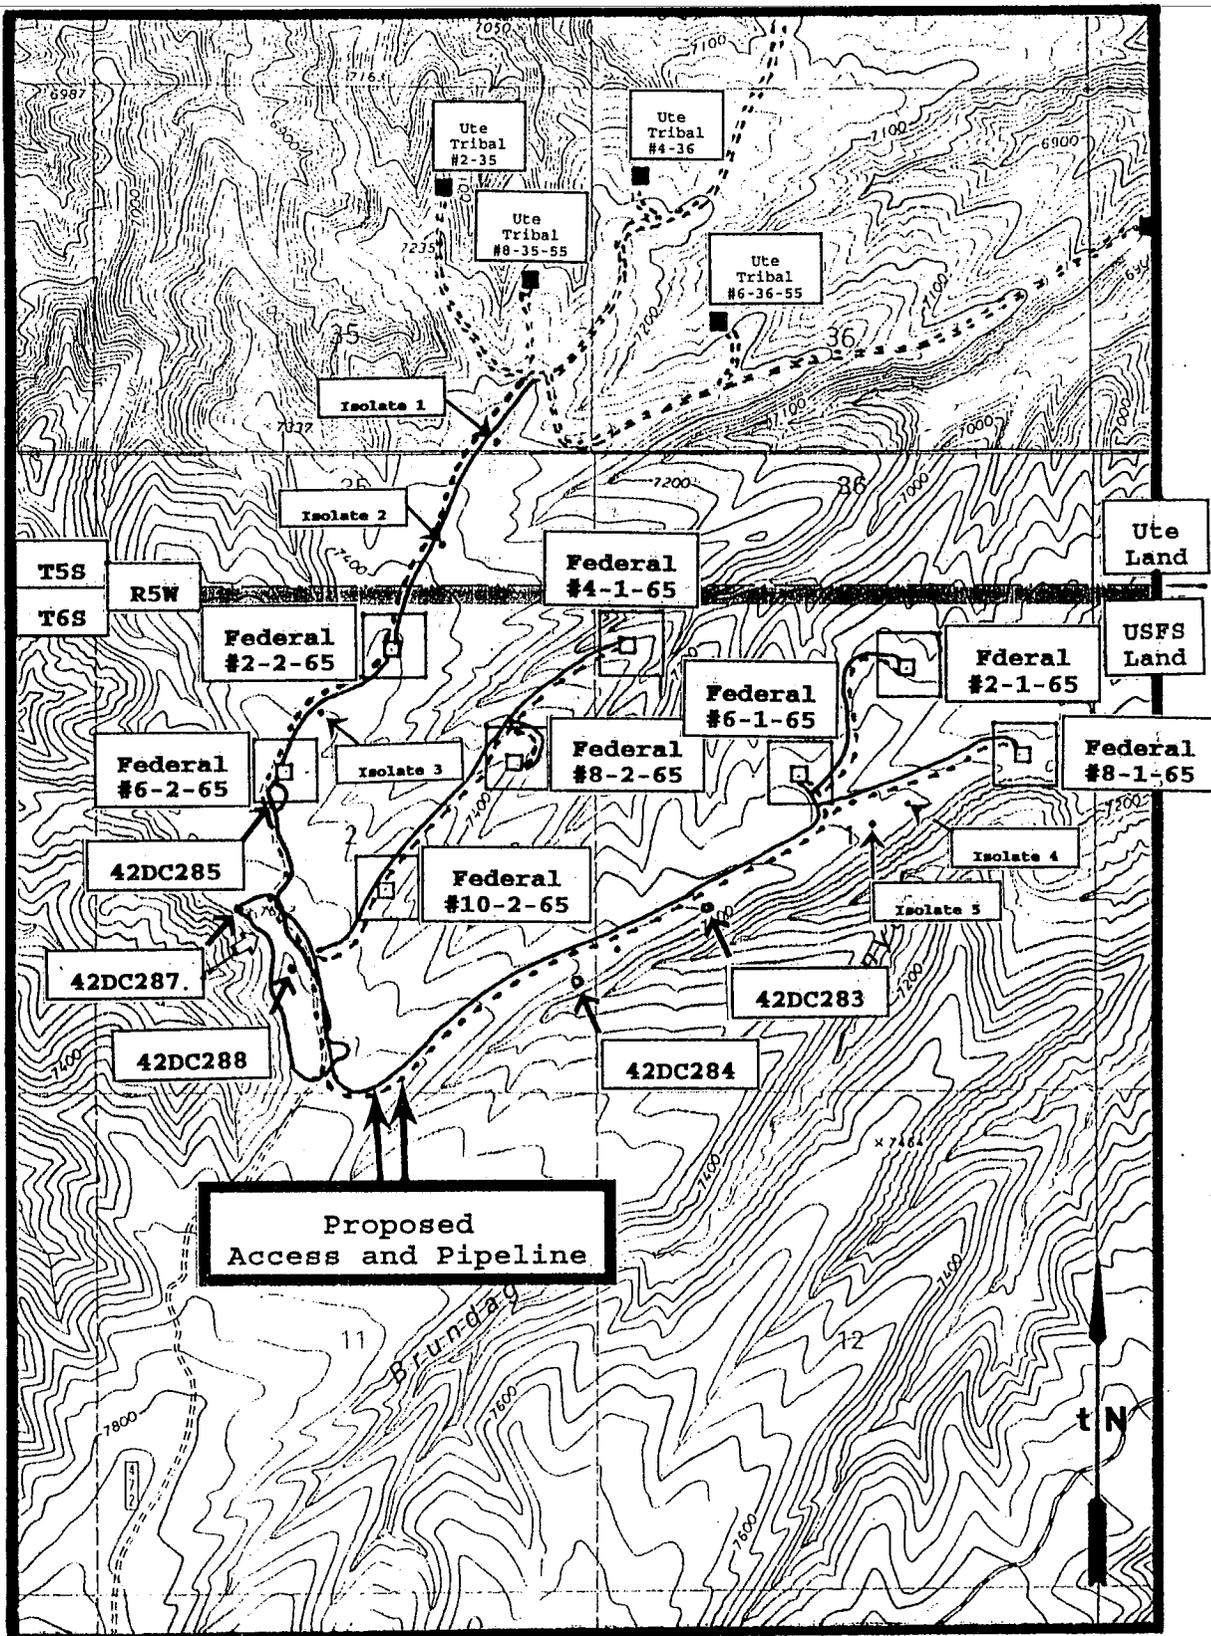

Figure 1. Location of Barrett Resources Corp. proposed Federal wells, their access and pipeline, existing Ute Tribal wells, sites 42DC283, 42DC284, 42DC285, 42DC287, 42DC288, and isolates 1 through 5 on USGS 7.5' quadrangle maps Anthro Mountain (1996) and Duchesne SW (1964).

## File Search

A file search was conducted at the Office by the Utah State Historical Society, Antiquities Section, Records Division on March 21, 2001. A second file search was conducted at the USFS Ashley National Forest office, Vernal office on May 30, 2001. One project (U-74-FS-0030(f) has been previously conducted in the project area. This project was conducted by the USDA Forest Service, Intermountain Region for the proposed Anthro Mountain Chaining Project in the Ashley National Forest (Gillio 1974). A total of twenty eight archaeological sites were recorded during USFS investigations.

Five sites (42DC283, 42DC284, 42DC285, 42DC287 and 42DC288) were found to be located in, along or adjacent to the proposed project area (Figure 2). Site 42DC283 was first recorded by Greg Taylor of the USFS in 1974 (Gillio 1974). Taylor reported that the site was a small lithic site and was completely collected. The site was revisited by the Ashley National Forest Archaeologist (Byron Loosle) in June of 1992. At that time twenty pieces of chipped stone debitage were inventoried. The debitage is situated along the edge of the chained area. The site is considered to be non-significant and ineligible for nomination and/or inclusion to the National Register of Historic Places (NRHP).

Site 42DC284 was first recorded by Greg Taylor of the USFS in 1974 (Gillio 1974). Taylor reported that although only three pieces of chipped stone debitage were noted, the site had the potential to for being nominated to the NRHP. Taylor completely collected the site. The site was revisited by the Ashley National Forest Archaeologist (Byron Loosle) in June of 1992. At that time only two pieces of chipped stone debitage were inventoried. The debitage is situated along the edge of the chained area. The site is considered to be non-significant and ineligible for nomination and/or inclusion to the National Register of Historic Places (NRHP).

Site 42DC285 was first recorded by Greg Taylor of the USFS in 1974 (Gillio 1974). Taylor reported only six pieces of chipped stone debitage scattered over an area 40 feet (12.1 m) by 300 feet (91.4 m). Taylor completely collected the site. The site was revisited by the Ashley National Forest Archaeologist (Byron Loosle) in June of 1992. At that time six additional pieces of chipped stone debitage were inventoried. However the site was considered to be much smaller. The is situated along the edge of the chained area. The site is considered to be in poor condition, non-significant and ineligible for nomination and/or inclusion to the National Register of Historic Places (NRHP).

Site 42DC287 was first recorded by Sheryl Goodrich of the USFS in 1974 (Gillio 1974). Goodrich reported pieces of chipped stone debitage scattered over a 50 sq m area. The boundaries of the chained area were moved to avoid the site. The site's National Register status was unevaluated.

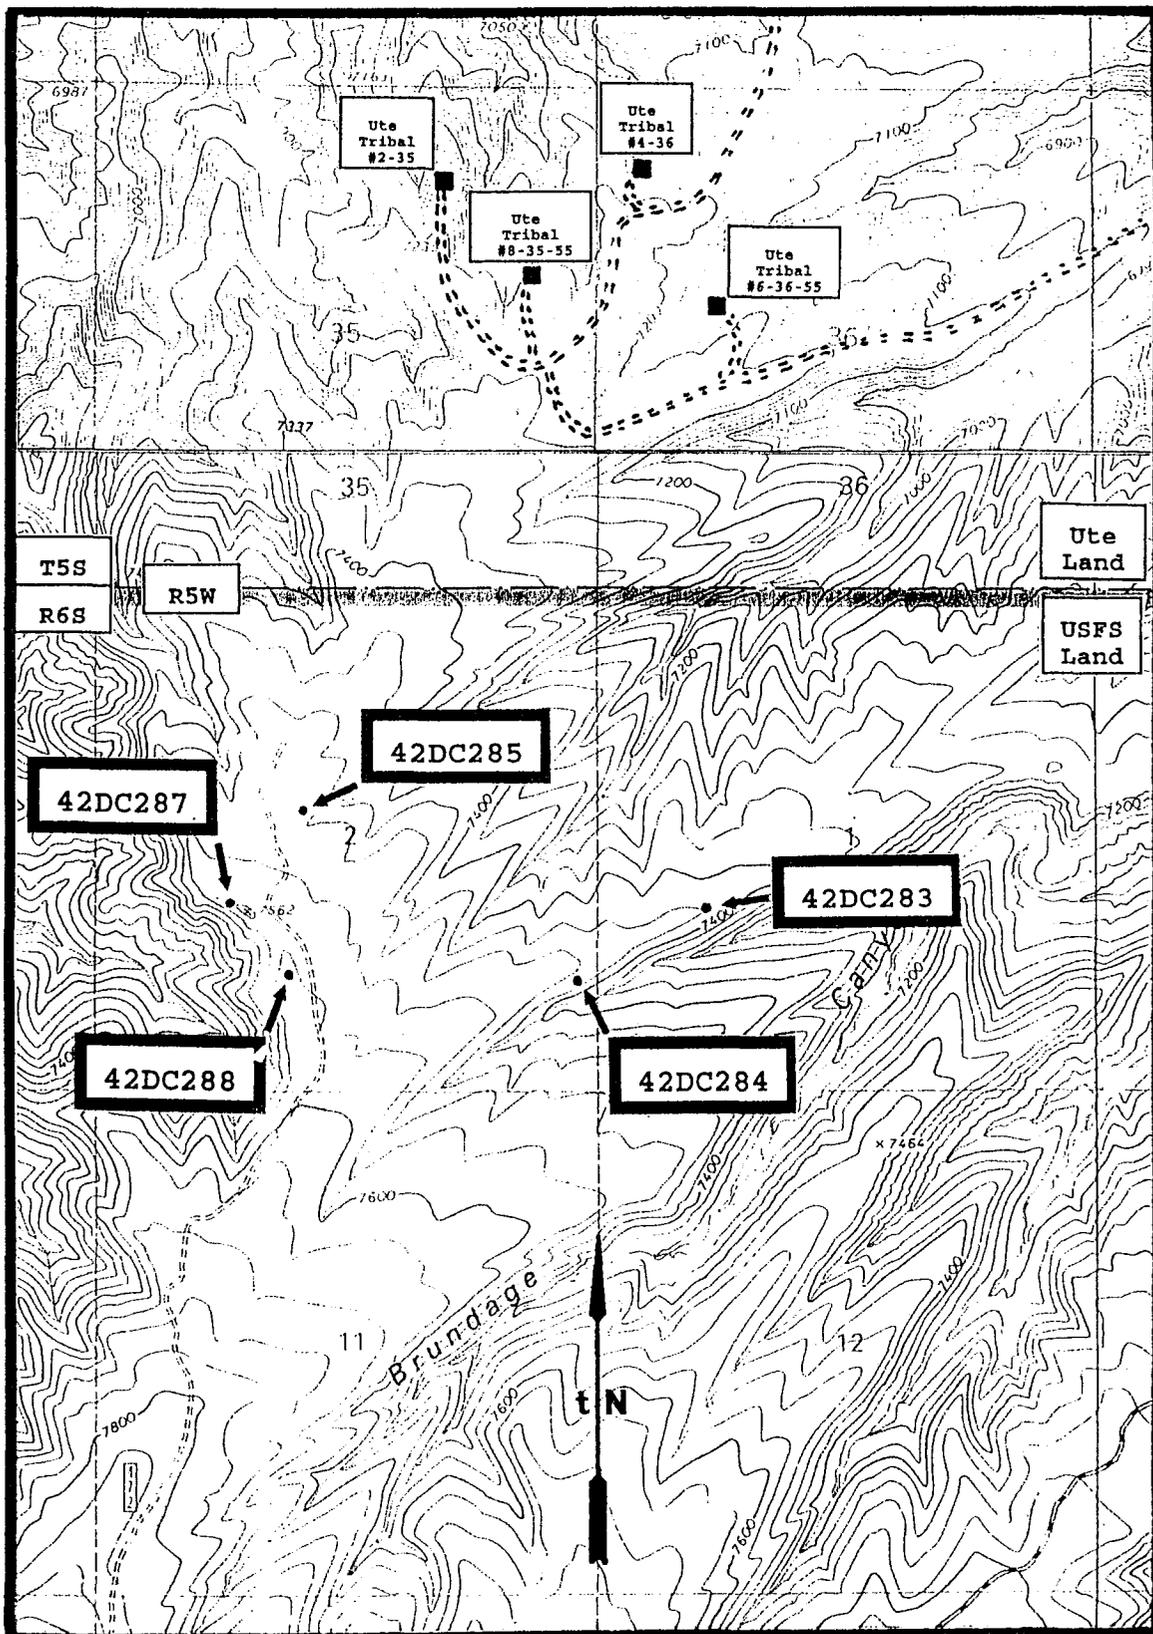

Figure 2. Location of Barrett Resources Corp. existing Ute Tribal wells, and sites 42DC283, 42DC284, 42DC285, 42DC287, 42DC288 on USGS 7.5' quadrangle maps Anthro Mountain (1996) and Duchesne SW (1964).

Site 42DC288 was first recorded by Sherel Goodrich of the USFS in 1974 (Gillio 1974). Goodrich reported a scatter of several pieces of chipped stone debitage 100 feet (304. m) by 500 (162. m), 5,000 sq m. The boundaries of the chained area were moved to avoid the site. The sites' National Register status was unevaluated.

No additional cultural resources and/or projects were recorded in the project area.

### Environment

Physiographically, the project is located in the Uinta Basin, approximately 25 miles southwest of Myton, Utah. The Uinta Basin is structurally the lowest part of the Colorado Plateau geographical province (Thornbury 1965:425). The terrain is characterized as having steep ridges and/or buttes of Uintah Formation sandstones and clays dissected by seasonal drainages and washes with wide flat alluvial plains. Portions of the desert hardpan and bedrock in the Sowers and Brundage Canyon area are covered with aeolian sand which may reach a depth of over 1 to 2 meters in areas. The project area east of Sowers Canyon which is the nearest permanent drainage. This drainage trends east 10 miles to Antelope Creek and then 10 miles north to Bridgeland, Utah and the Duchesne River.

Much of the project area has been chained. Thus the crest of ridges and tops of hill consist of bunchgrasses. however, vegetation in the project area is dominated by a Pinon/Juniper community with a understory of low sagebrush, shortgrasses, rabbit brush and prickly pear cactus.

Species observed in the project area include; Pinyon pine (Pinus Edulis), juniper (Juniperus Osteosperma), curlleaf mountain mahogany (Cercocarpus ledifolius), shadscale (Atriplex confertifolia), big sagebrush (Artemesia Tridentata), sand sage, (Artemesia filifolia), saltbush (Atriplex nuttallii), rabbitbrush (Chrysothamnus viscidiflorus), winterfat (Eurotia lanata), greasewood (Sarcobatus baileyi), Yucca (Yucca sp.), Indian ricegrass (Oryzopsis hymenoides), desert needlegrass (Stipa speciosa), wild buckwheat, Eriogonum ovalifolium), desert globemallow (Bromus tectorum), peppergrass (Lepidium perfoliatum), Russian thistle (Salsola kali), and prickly pear cactus (Opuntia spp.).

Federal #2-2-65

The immediate proposed Barrett Resources Corp. Federal #2-2-65 well is situated on top of a hill. The proposed well pad is situated in a flat covered with low sagebrush and bunchgrasses. The proposed access and pipeline originate on Uintah-Ouray Ute land at the existing Ute Tribal #8-35-55 well access located in the SE/SE 1/4 of Section 35 of T5S R5W (Figure 1). The proposed access and pipeline follows a existing two track road and trends south 2500 feet (762.2 m), up the crest of a south-north trending ridge,

to the Uintah-Ouray Ute/USFS boundary. The access and pipeline then continue an additional 600 feet (182.9 m) to the proposed well pad. Vegetation on the well location is consists of low sagebrush, rabbit brush, bunchgrasses, and prickly pear cactus. Pinyon/juniper with a understory of low sagebrush and bunchgrasses dominates the surrounding drainages. Sediments on the proposed well location consist of a mixture of colluvial silty sands mixed with residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<15 cm). The proposed well location is at a elevation of 7420 feet (2262.1 m) AMSL.

Federal #6-2-65

The immediate proposed Barrett Resources Corp. Federal #6-2-65 well is situated on top of a hill. The proposed well pad is situated in a flat covered with low sagebrush and bunchgrasses. The proposed access and pipeline parallel each other and originate at the existing Federal #2-2-65 well (Figure 1). The proposed access and pipeline follow along a existing two track road and trends south 1900 feet (579.2 m), along the top of a large broad hill to the proposed well pad. Vegetation on the well location is consists of low sagebrush, rabbit brush, bunchgrasses, and prickly pear cactus. Pinyon/juniper with a understory of low sagebrush and bunchgrasses dominates the surrounding drainages. Sediments on the proposed well location consist of a mixture of colluvial silty sands mixed with residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<15 cm). The proposed well location is at a elevation of 7430 feet (2265.2 m) AMSL.

Federal #10-2-65

The immediate proposed Barrett Resources Corp. Federal #10-2-65 well is situated on top and east side of a southwest-northeast trending ridge. The proposed well pad is situated in a chained flat covered with low sagebrush and bunchgrasses. The proposed access and pipeline parallel each other and originate at the existing Federal #6-2-65 well (Figure 1). The proposed access and pipeline are 2500 feet (762.2 m) long. The proposed access and pipeline follow a existing two track road 1500 feet (457.3 m) south, then turns off of the two track, and continues northeast an additional 1000 feet (204.8 m) along the crest of a ridge to the proposed well pad. Vegetation on the well location is consists of low sagebrush, rabbit brush, bunchgrasses, and prickly pear cactus. Pinyon/juniper with a understory of low sagebrush and bunchgrasses dominates the surrounding drainages. Sediments on the proposed well location consist of a mixture of colluvial silty sands mixed with residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<15 cm). The proposed well location is located at a elevation of 7430 feet (2265.2 m) AMSL.

Federal #8-2-65

The immediate proposed Barrett Resources Corp. Federal #8-2-65 well is situated in the bottom of a small steep sided ephemeral drainage and along the on the eastern talus slope of a southwest-northeast trending ridge. Vegetation on the proposed well pad is a pinyon-juniper community with a small understory of mountain mahogany, low sagebrush, rabbit brush, bunchgrasses and prickly pear cactus. The proposed access and pipeline parallel each other and originate at the existing Federal #10-2-65 well (Figure 1). The proposed access and pipeline trends northeast 2000 feet (609.7 m) along the crest of a southwest-northeast trending ridge, then turns east-southeast down the ridge's eastern talus slope 400 feet (121.9 m) to the proposed well pad. Pinyon/juniper with a understory of low sagebrush and bunchgrasses dominates the surrounding drainages and landscape. Sediments on the proposed well location are colluvial talus slopes deposits and consist of small residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<15 cm). The proposed well location is located at a elevation of 7390 feet (2253.0 m) AMSL.

Federal #4-1-65

The immediate proposed Barrett Resources Corp. Federal #4-1-65 well is situated at the end and along the western slope of a southwest-northeast trending ridge. Vegetation on the proposed well pad is a pinyon-juniper community with a small understory of mountain mahogany, low sagebrush, rabbit brush, bunchgrasses and prickly pear cactus. The proposed access and pipeline parallel each other and originate at the existing Federal #8-2-65 well (Figure 1). The proposed access and pipeline trend northeast 1500 feet (457.3 m) along the crest of a southwest-northeast trending ridge. The access slowly drops down the north-northwestern slope of the ridge, to the proposed well pad. Pinyon/juniper with a understory of low sagebrush and bunchgrasses dominates the surrounding drainages and landscape. Sediments on the proposed well location are colluvial talus slopes deposits and consist of small residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<15 cm). The proposed well location is located at a elevation of 7205 feet (2196.6 m) AMSL.

Federal #6-1-65

The immediate proposed Barrett Resources Corp. Federal #6-1-65 well is situated in a broad open flat along the top and northwestern slope of a large broad southwest-northeast trending ridge. Vegetation on the proposed well pad is a mixture of pinyon-juniper community and a open chained area covered with mountain mahogany, low sagebrush, rabbit brush, bunchgrasses and prickly pear cactus. The proposed access and pipeline parallel each other and originate at the confluence of the Federal #10-2-65 well access and a existing two track road in the C/S/SE/NE/SW 1/4 of Section 2,

T6S R5W (Figure 1). The proposed access and pipeline follow the existing two track road 3000 feet (914.6 m), then turns off the two track and continues northeast an additional 6500 feet (1981.7 m), along the crest of a southwest-northeast trending ridge, to the proposed well pad. The access slowly drops down the northwestern slope of the ridge, to the proposed well pad. Vegetation along the access and pipeline and on the well pad have been previously chained. Vegetation consists of low sagebrush, yucca, rabbitbrush, bunchgrasses and prickly pear cactus. Pinyon/juniper with a understory of low sagebrush and bunchgrasses dominates the surrounding drainages and landscape. Sediments along the access and pipeline, and on the proposed well location are colluvial talus slopes deposits and consist of small residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<15 cm). The proposed well location is at a elevation of 7375 feet (2248.4 m) AMSL.

#### Federal #2-1-65

The immediate proposed Barrett Resources Corp. Federal #2-1-65 well is situated on top of a small narrow finger ridge that splits, to the north, off of a larger southwest-northeast trending ridge. The proposed access and pipeline parallel each other, originate at the Federal #6-1-65 well and its access, and trend 2000 feet (609.7 m) north to the proposed well pad (Figure 1). The well pad is situated in a chained area. Vegetation consists of low sagebrush, yucca, rabbitbrush, bunchgrasses, and prickly pear cactus. Pinyon/juniper with a understory of low sagebrush and bunchgrasses dominates the surrounding drainages and landscape. Colluvial sediments along the access and pipeline, and on the proposed well location consist of shallow silty sands that are mixed with residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<15-20). The proposed well location is at a elevation of 7375 feet (2248.4 m) AMSL.

#### Federal #8-1-65

The immediate proposed Barrett Resources Corp. Federal #8-1-65 well is situated in a small saddle along the top of a southwest-northeast trending ridge. The proposed access and pipeline originate at the existing Federal #601065 well and its access. The proposed access and pipeline parallel each other and trend northeast 2000 feet (609.7 m) to the proposed well pad (Figure 1). The well pad, its access and pipeline are situated in a chained area. Vegetation consists of low sagebrush, yucca, rabbitbrush, bunchgrasses, and prickly pear cactus. Pinyon/juniper with a understory of low sagebrush and bunchgrasses dominates the surrounding drainages and landscape. Colluvial sediments along the access and pipeline, and on the proposed well location consist of shallow silty sands that are mixed with residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<15-20). The proposed well location is at a elevation of 7225 feet (2202.7 m) AMSL.

## Field Methods

All of the proposed eight well locations (Table 1) are situated on USDA, USFS, Ashley National Forest lands. A total of 10 acres was surveyed around the centerstake of each proposed well location to allow for relocation of the pad if necessary. The survey was accomplished by walking transects spaced no more than 15 and 20 meters apart. The access and pipeline corridors, located on USFS lands, are 20,780 feet (6335.3 m) long and 100 feet (30.4 m) wide, 47.7 acres. Thus, a total of 175.4 acres (80 block and 95.4 linear) were surveyed on USFS lands.

The access and pipeline corridors, located on Uintah-Ouray Ute tribal lands, are 2500 feet (6335.3 m) long and 100 feet (30.4 m) wide, 5.74 acres. Thus a total of 11.54 linear acres were surveyed on Uintah-Ouray Ute tribal lands.

Areas of subsurface exposure (ant hills, blowouts, eroding slopes and cutbanks) were examined with special care in order to help assess the potential for buried cultural deposits.

## Results

A total of 186.94 acres were surveyed for cultural resources within and around the eight proposed Barrett Resources Corp. Federal wells (Table 1), and along their access and pipeline (Figure 3). Five sites (42DC283, 42DC284, 42DC285, 42DC287, and 42DC288) were revisited by AIA (Figure 3). Sites 42DC283 and 42DC284 could not be relocated. Two sites 42DC285 and 42DC287 were inventoried and mapped. Sites 42DC287 and 42DC288 were joined and recorded as one (42DC287). In addition, five isolates U-01-AY-0060(f,i)-1 through 5) were recorded. No additional cultural materials were located during these archaeological investigations.

Site: 42DC285

Location: C/S/SE/NW 1/4 of Section 2, T6S R5W (Figure 1 and 3)  
UTM 12 5/49/749 mE 44/20/574 mN ( $\pm 17$  EPE, 1.5 DOP)

Setting: Site 42DC285 is situated on top of a hill. The site is situated in a flat covered with low sagebrush and bunch grasses adjacent immediately south of the proposed Barrett Federal #6-2-65 well pad (Figure 3 and 4). A existing two track road, and the proposed well access and pipeline cross through the western boundary of the site. The site area has been chained to remove vegetation. Vegetation consists of low sagebrush, rabbit brush, bunch grasses, and prickly pear cactus. A stand of Pinyon pine and juniper with a understory of low sagebrush and bunchgrasses dominates a drainage 200 feet (60.9 m) to the southeast. Sediments consist of a mixture of colluvial silty sands mixed with residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<35 cm). The elevation is 7548 feet (2301.2 m) AMSL.

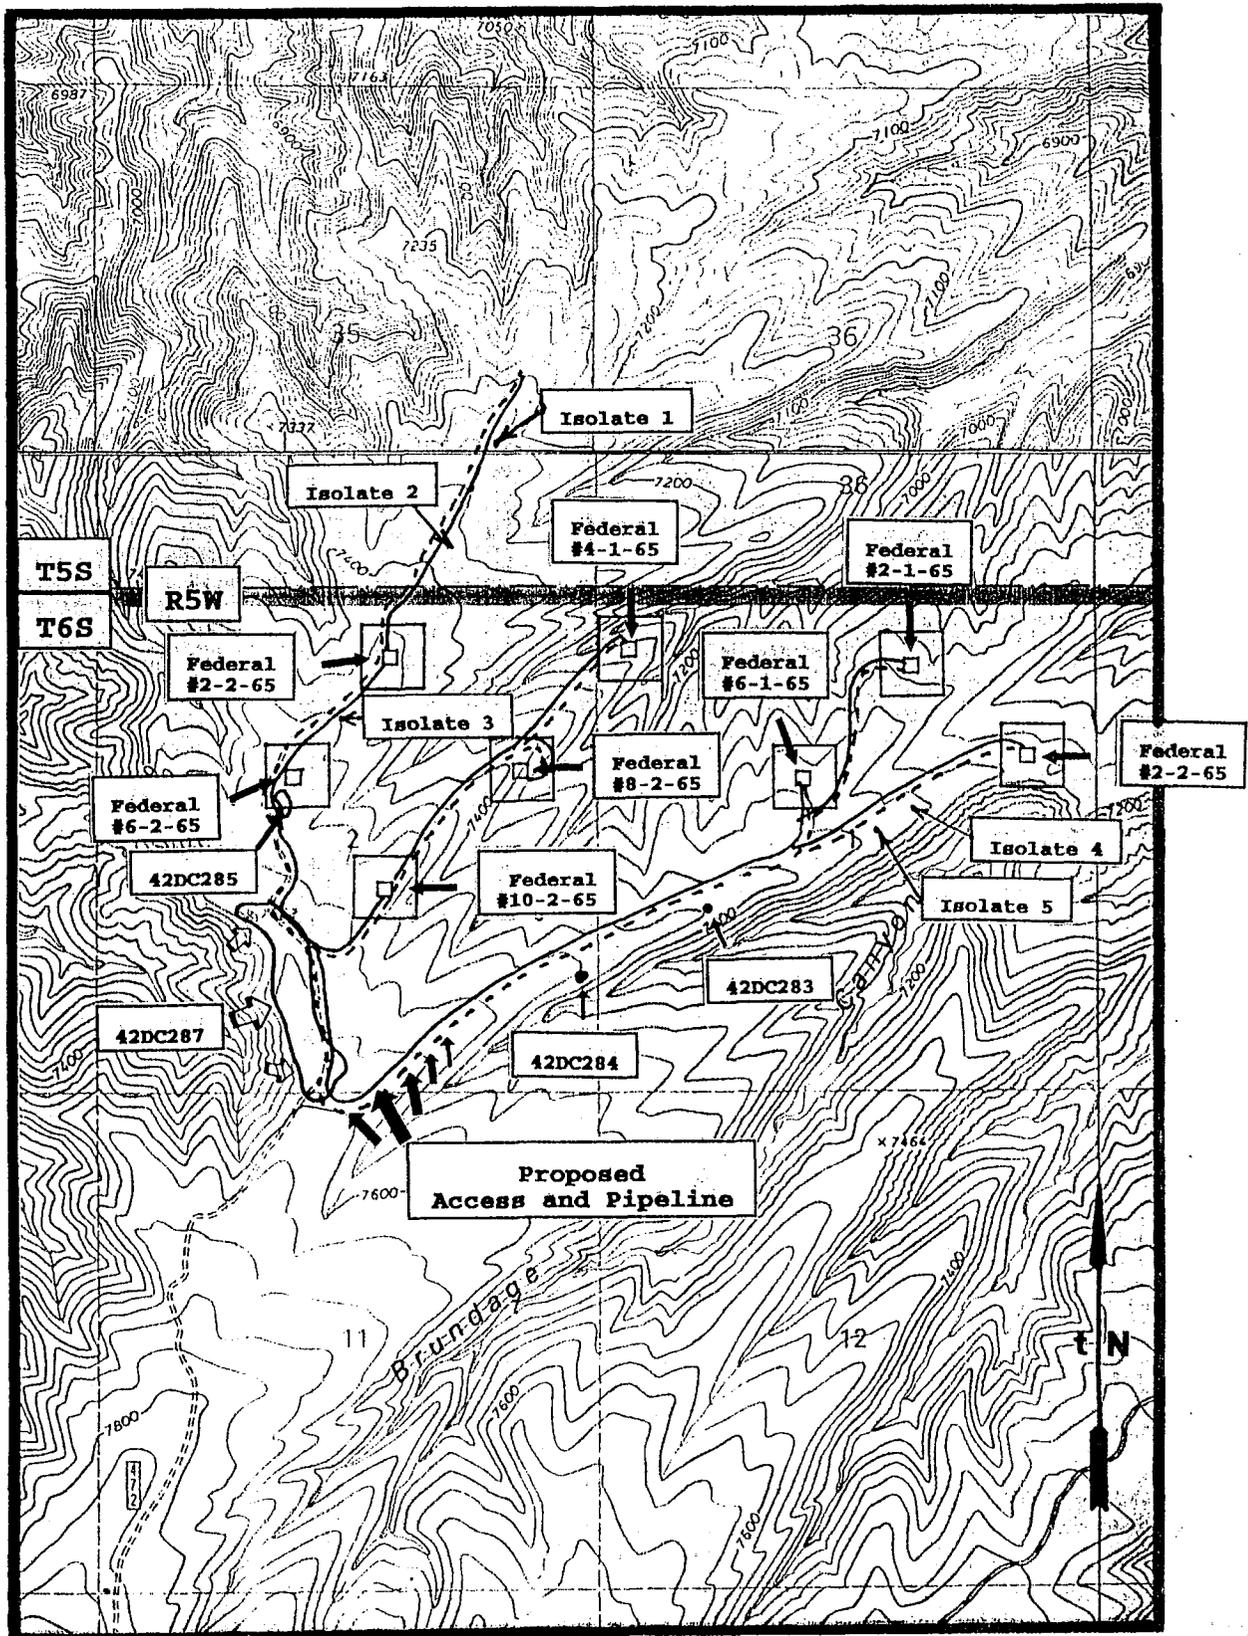

Figure 3. Results of U-01-AY-0030(f,i) archaeological project and location of the proposed eight Barrett Resources Corp. Federal wells, their access and pipelines, sites 42DC283, 42DC284, 42DC285, 42DC287, and isolates 1 through 5 on 7.5' quadrangle maps Anthro Mountain (1996) and Duchesne SW (1964).

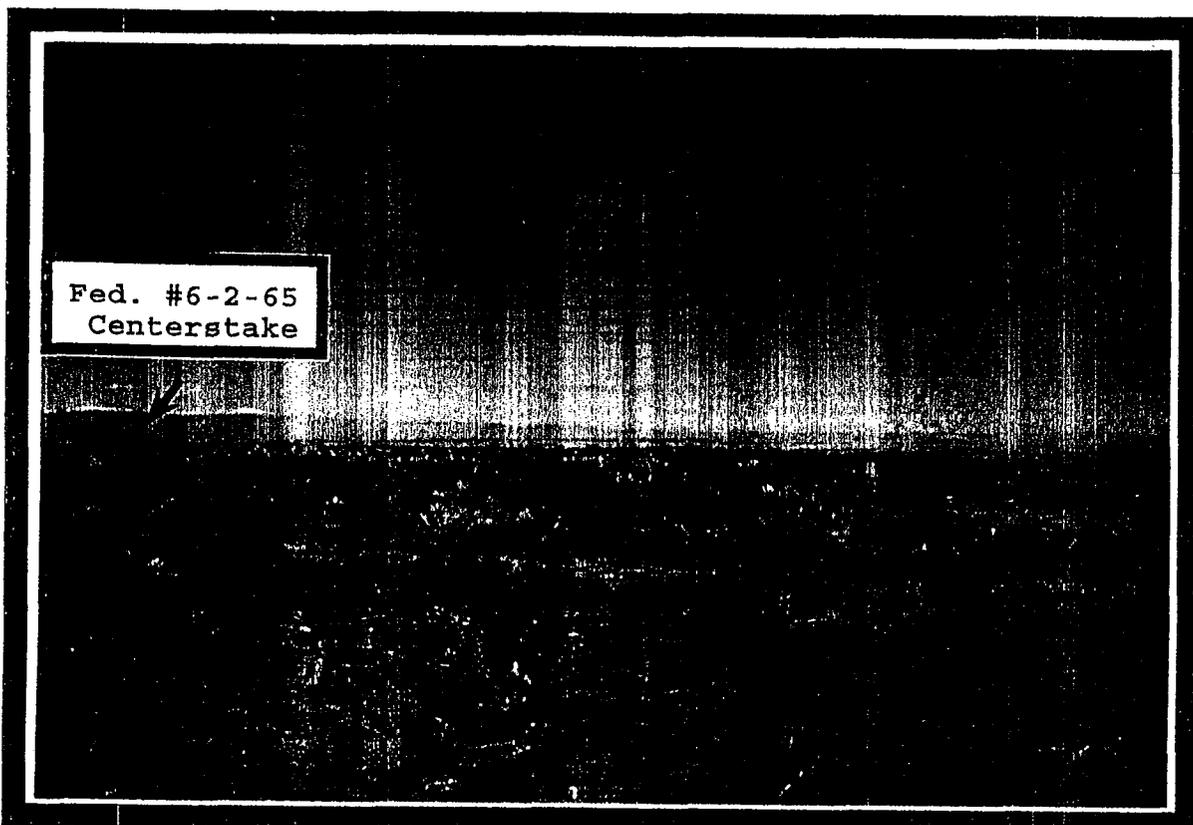

Figure 4. View to north of site area (foreground) and proposed Barrett Res. Corp. Federal #6-2-65 well centerstake.

Description: Site 42DC285 is a low density scatter of chipped stone tools and chipped stone debitage. The site measures 80 m (N-S) by 75 m (E-W), 6,000 sq m (Figure 5). The chipped stone tools include one projectile point and two biface fragments (Figure 6). The two bifaces (Figures 6A and 6B) are made from a tan to light brown chert. The first biface (Figure 6A) is a blade fragment that exhibits heat altered 'pot lid' fractures. The second biface (Figure 6B) is a stage two biface exhibiting percussion bifacial flaking and the original surface cortex. The projectile point (Figure 6C) is made from a white 'opaque' chert and is a base fragment of a archaic 'Elko' corner notch. The point base is .38 cm in thickness and has a hafting width of 1.18 cm and a hafting length of 1.36 cm.

Thirty-one pieces of chipped stone debitage were inventoried. A breakdown of debitage by material type can be found in Table 2.

The site has been impacted by the chained vegetation removal activities, burning of slash piles and prescribed burns, two track road use, possible vandalism (collection), erosion and deflation. Eroding slopes and cut banks indicate that shallow (<20 cm) silty sandy colluvial deposits overlies sandstone, clay and shale bedrock. These colluvial sediments have been disturbed by chaining activities, and burning. Therefore, the possibility of buried and

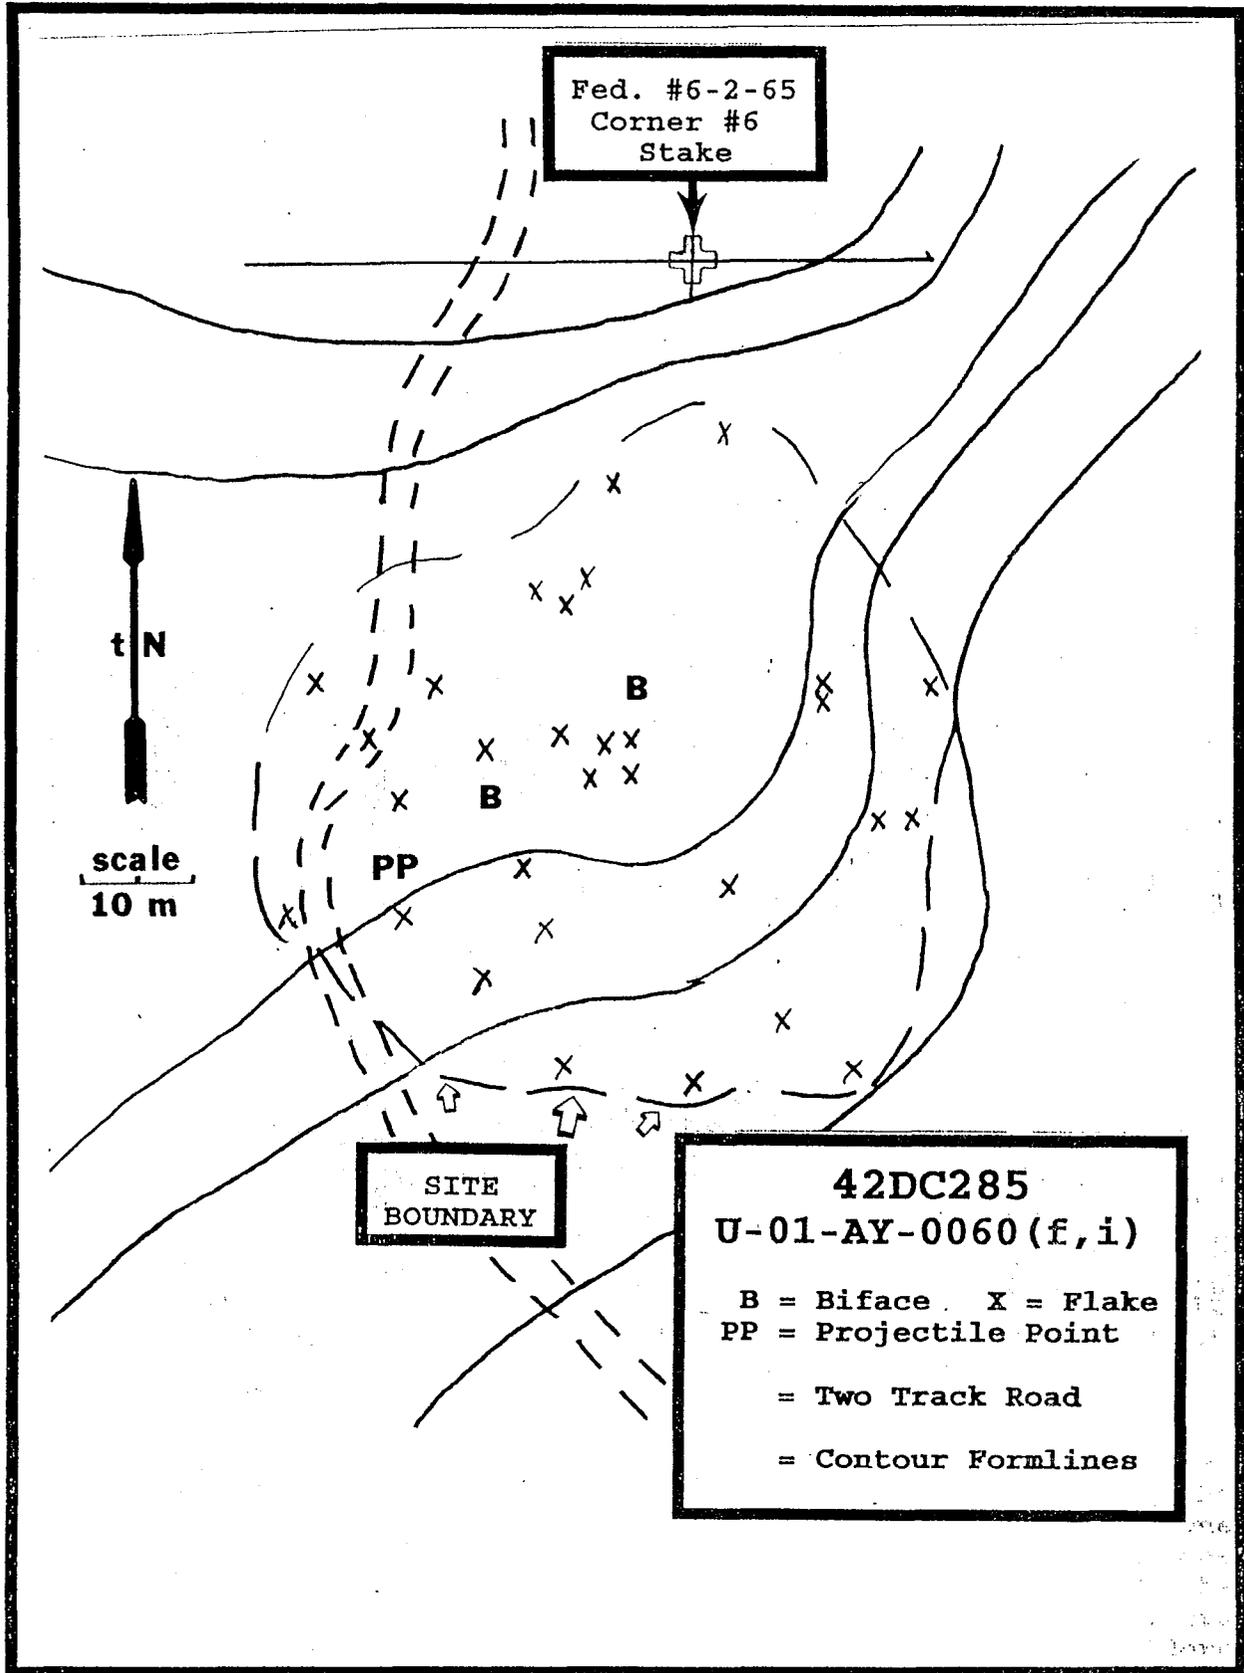

Figure 5. Site 42DC285 sketch map.

intact cultural materials is low.

Table 2. Breakdown of chipped stone debitage by material type inventoried at 42DC285.

MATERIAL TYPE	PRI	SEC	TER	Bth	SH	TOTAL	%
Chert White/Tan	0	4	6	1	3	14	45.1
Tan/Light Brown (banded, algalitic)	1	5	7	1	3	17	54.9
TOTAL	1	9	13	2	6	31	100
PERCENTAGES	3.3	29.0	41.9	6.5	19.2	100	

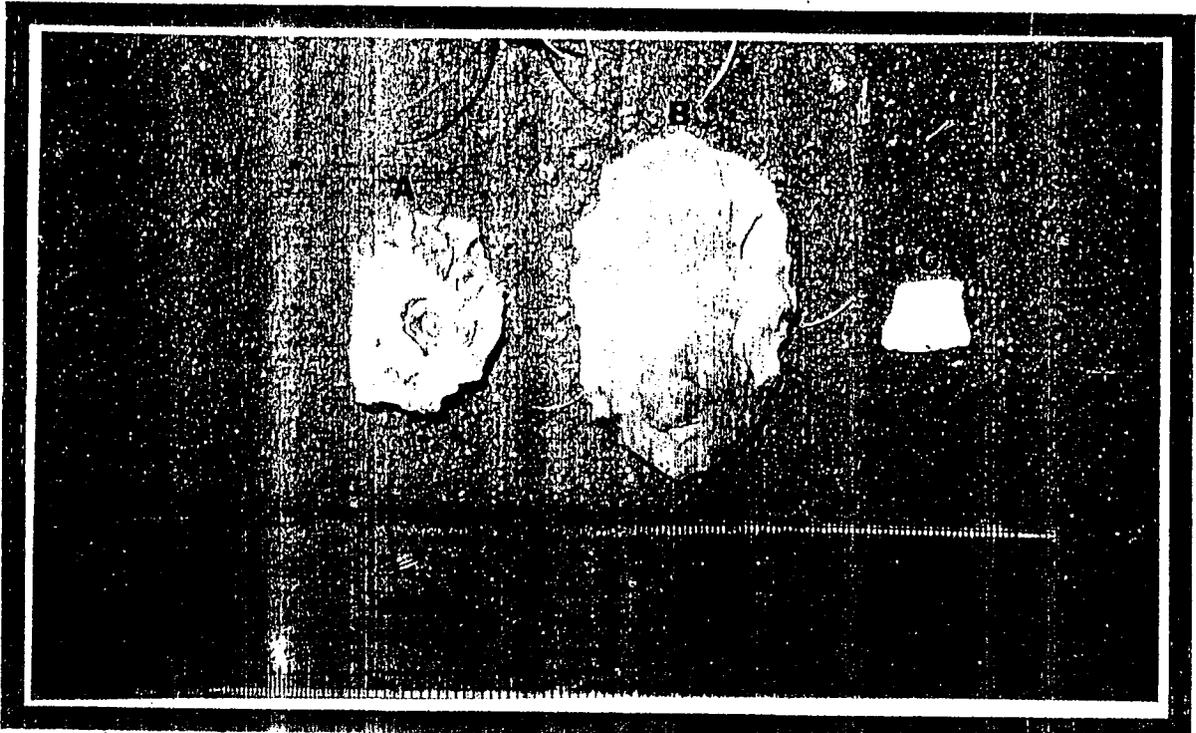

Figure 6. Photo of the two bifaces (A and B) and projectile point (C) recorded at 42DC285.

National Register Status: Site 42DC285 has been inventoried, mapped but not tested. Eroding slopes and cut banks indicate that shallow (<20 cm) silty sandy colluvial deposits overlie sandstone, clay and shale bedrock. These colluvial sediments have been disturbed by chaining activities. Thus the sites integrity has compromised, and the possibility of buried and intact cultural materials is low. Site 42DC285 is non-significant and considered not eligible for nomination and/or inclusion to the NRHP.

Site: 42DC287

Location: C/E/SW 1/4, Section 2, T6S R5W (Figure 1 and 3)

UTM	12	5/49/756	mE	44/26/243	mN	(+17 EPE, 1.2 DOP)
	12	5/49/645	mE	44/26/275	mN	(+16 EPE, 1.7 DOP)
	12	5/49/841	mE	44/25/840	mN	(+13 EPE, 1.3 DOP)
	12	5/49/870	mE	44/25/769	mN	(+17 EPE, 1.3 DOP)
	12	5/49/930	mE	44/25/703	mN	(+16 EPE, 1.3 DOP)

Setting: Site 42DC287 is situated on top of a hill/ridge. A existing two track road, and the proposed access and pipeline cross through the eastern boundary of the site (Figure 7). A pinyon pine and juniper community with a understory of low sagebrush, rabbit brush, bunchgrasses and peickly pear cactus dominate the site area. A large area adjacent immediatley east has been chained to remove vegetation. Vegetation consists of low sagebrush, rabbit brush, bunch grasses, and prickly pear cactus. A stand of Pinyon pine and juniper with a understory of low sagebrush and bunchgrasses dominates a drainage 200 feet (60.9 m) to the southeast. Sediments consist of a mixture of colluvial silty sands mixed with residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<35 cm). The elevation varies between 7562 and 7600 feet (2305.4-2317.0 m) AMSL.

Figure 7. View to north of site area (foreground) and existing two track road and proposed Barrett Res. Corp. well access.

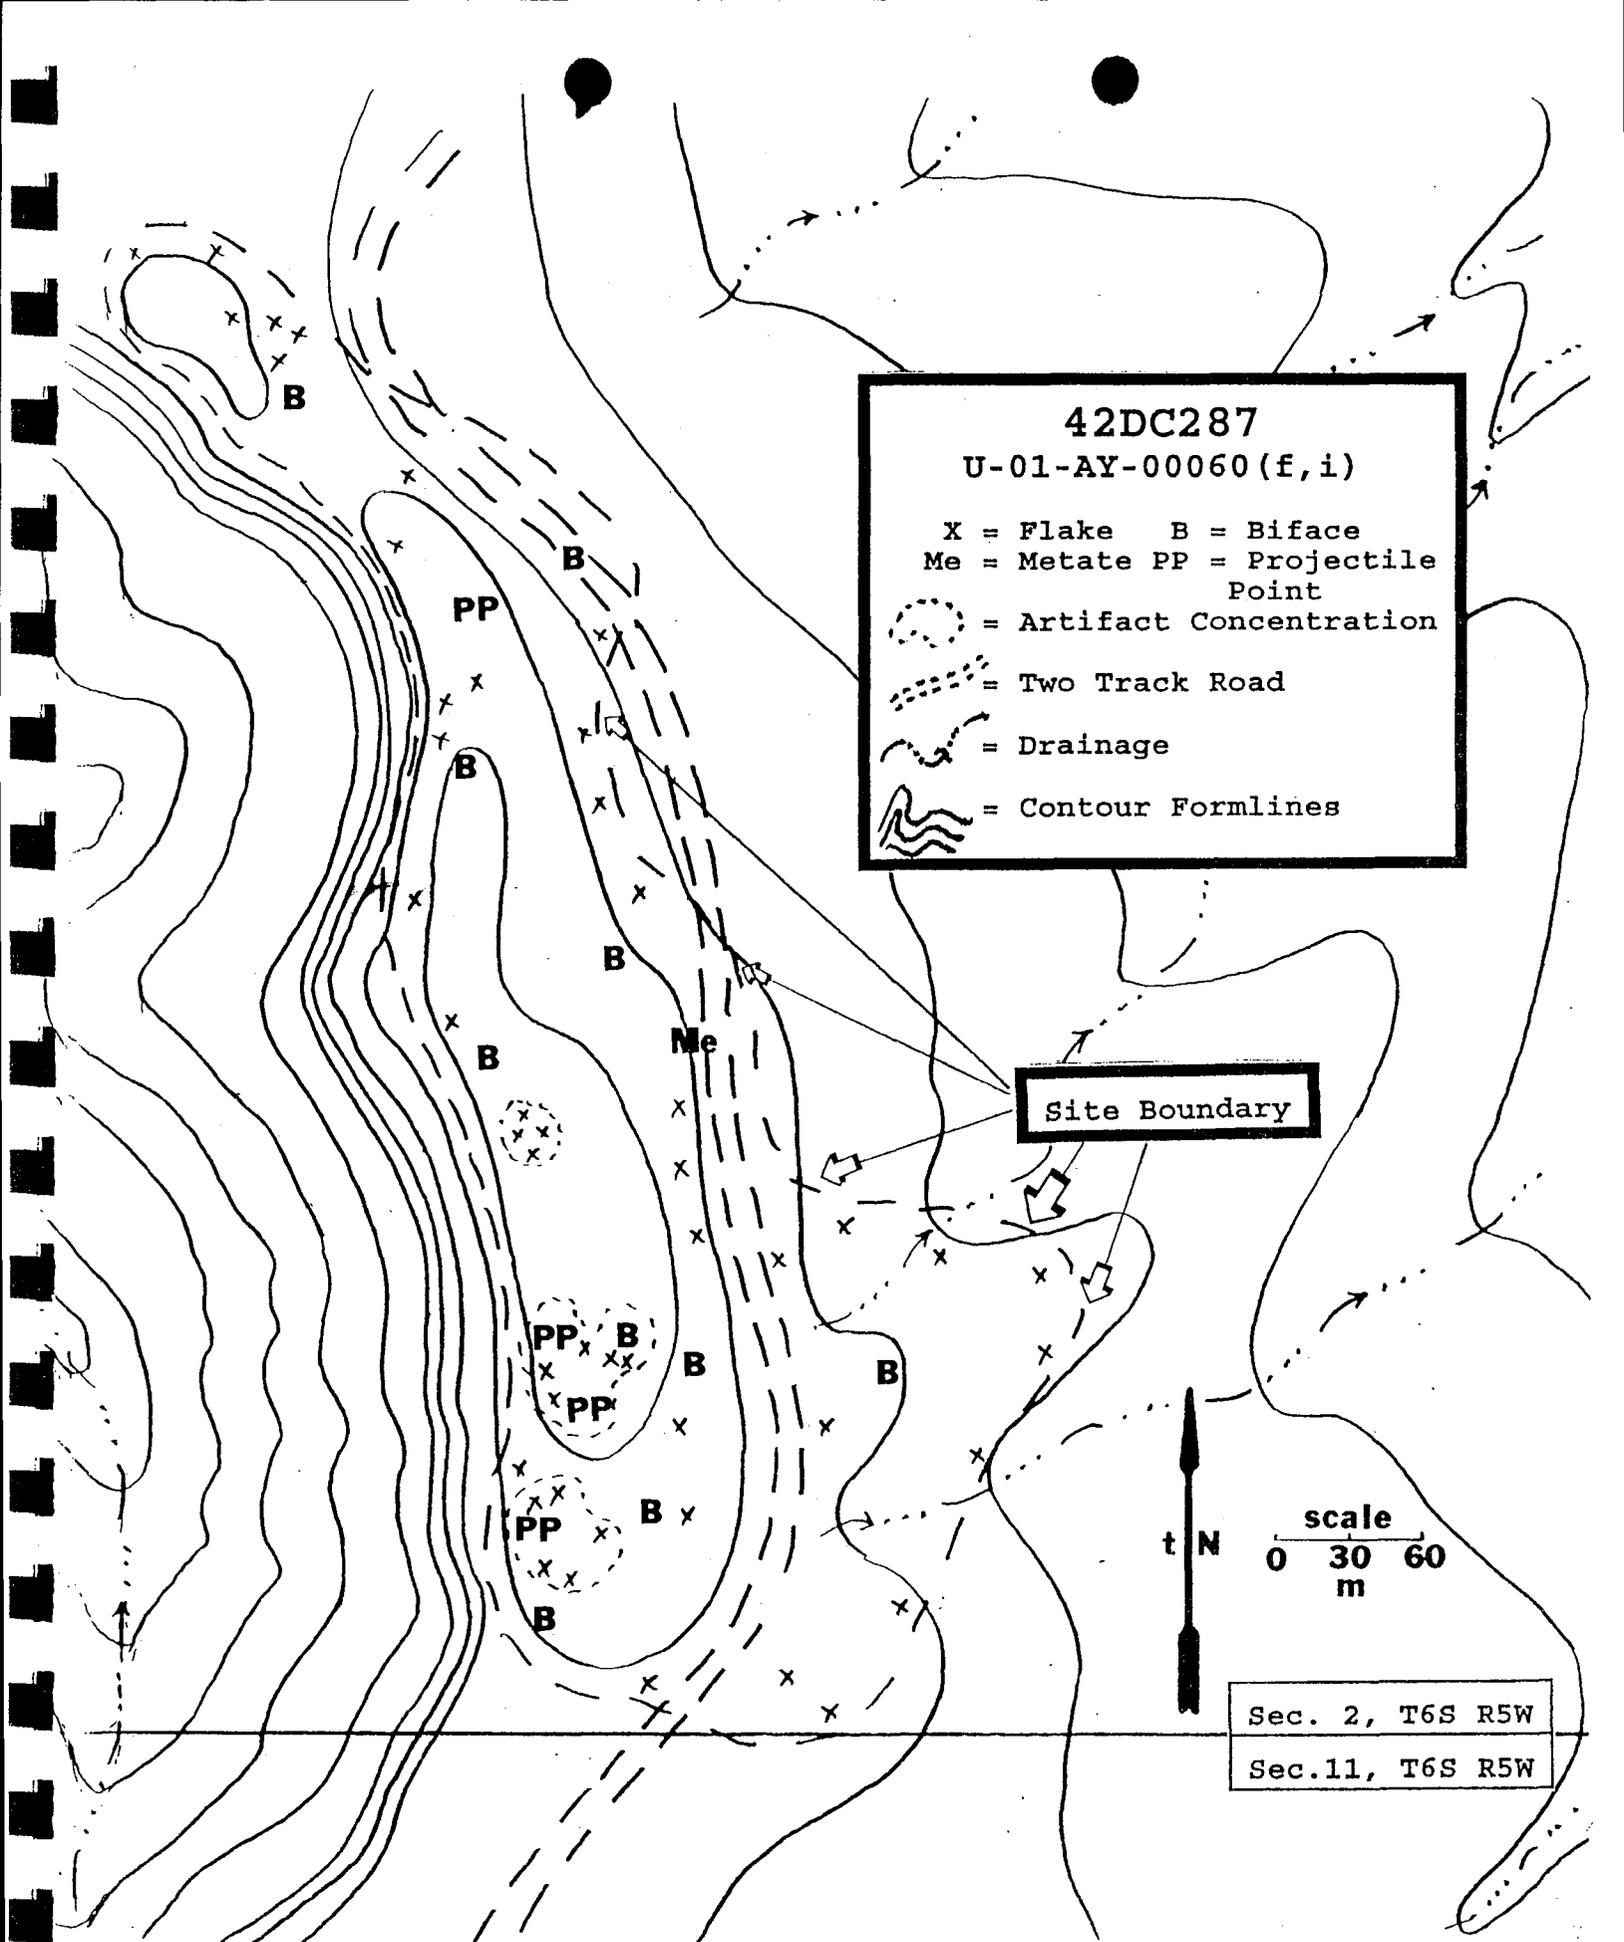

Description: Site 42DC287 is a large low density scatter of chipped and ground stone tools and chipped stone debitage. The site measures 615 m (NNW-SSE) by 135 m (E-W), 83,025 sq m (Figure 8). The chipped stone tools include five projectile points and ten biface fragments (Figure 9 and 10). Measurements of each projectile point recorded at 42DC287 can be found in Figure 9. The first projectile point (Figures 9A and 10F) is made from a tan/light grey chert, is broken crosswise across the blade, and exhibits corner notches. This projectile point is similar in characteristics to a archaic 'Elko' corner notch. The second projectile point (Figures 9B and 10H) is made from a grey chert and exhibits wide shallow side notches similar to a archaic 'Elko' side notch style. The blade edges of the second point have been retouched and reworked. The third projectile point (Figure 9C and 10G) is made from a grey/light brown chert and exhibits wide shallow notches similar to a archaic 'Elko' side notch style. The fourth projectile point (Figure 9D) is a base fragment made from a white chert. The fourth projectile point is a fragment of a archaic 'Elko' corner notch. the fifth projectile point (Figure 9E) is a blade fragment made from a tan/light brown chert.

Of the ten bifaces six can be seen in Figure 10 (A,B,C,D,E and I). The bifaces represent all stages of bifacial reduction from Stage 1 crude bifaces with cortex (Figure 10A), Stage 2 bifaces (Figure 10C and 10E), to fragments of projectile point preforms (Figure 10B, 10D,10I).

Three hundred and fifty-three pieces of chipped stone debitage were inventoried at 42DC287. A breakdown of the chipped stone debitage by material type can be found in Table 3.

Figure 9. Illustrations of projectile points recorded at 42DC287

Figure 10. Photo of bifaces and projectile points inventoried at 42DC287

The ground stone recorded at the site is represented by a single light brown sandstone 'slab' metate fragment. The metate exhibits pecking, smoothing and striations. The metate is situated in the western rut of the existing two track road.

The frequency of chipped stone debitage inventoried indicates that a local white/tan/light grey to brown chert was procured. In addition, the frequency of chipped stone debitage and numerous bifaces recorded indicates that chipped stone tool manufacturing and resharpening activities also occurred. The presence of a metate may also suggest that vegetable products were gathered and processed. The style and type of projectile points inventoried suggest a Archaic age for the site.

The site is has been impacted by erosion, deflation and the construction and use of a two track road. Eroding slopes and cut banks indicate that sediments on the site consist of isolated pockets shallow (<20 cm) aeolian sand that overlie silty sandy colluvium and Uintah formation sandstone, clay and shales. Uintah formation sandstone, clay and shale bedrock is exposed throughout the site. The possibility of buried and intact cultural materials at the site is low.

The cultural materials (chipped and ground stone tools, projectile points and chipped stone debitage) are spread across the top of a ridge for approximately 1/2 mile and connect sites 42DC287 and 42DC288 recorded previously by Sherel Goodrich. As per the request of the USDA, Ashley Forest Archaeologist (Byron Loosle) the two sites have been joined under the site number 42DC287.

National Register Status: Site 42DC287 has been recorded, mapped, but not tested. The site is a large low density scatter of chipped and ground stone tools and chipped stone debitage. Eroding slopes and cutbanks indicate that the site has been subjected to erosion and deflation. Thus the integrity of the site is questionable. The possibility for the presence of buried and/or intact cultural materials is low. Therefore, the site is non-significant and not considered eligible for nomination and/or inclusion to the NRHP.

#### Isolates

Isolate: U-01-AY-0060(f,i)-1

Location: C/E/SW/SW/NE/SE 1/4 of Section 35, T5S R5W (Figure 3)

Setting: Isolate U-01-AY-0060(f,i)-1 is situated on the crest of a ridge. A existing two track road, and the proposed access and pipeline are situated 100 feet (30.4 m) west of the isolate. A pinyon pine and juniper community with a understory of low sagebrush, rabbit brush, bunchgrasses and prickly pear cactus dominate the site area. Sediments consist of a mixture of colluvial silty sands mixed with residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<25 cm). The elevation varies between 7330 feet (2234.7 m) AMSL.

Description: The isolate consists of ten pieces of chipped stone debitage. The debitage consists of five primary, three secondary flakes and two pieces of shatter. The debitage is made from a local tan/light brown (banded) chert.

No additional artifacts (projectile points, chipped and/or ground stone tools) and/or features (firepits, cairns) were found in association with the isolate. The isolate is not considered to be significant. Eroding slopes and cut banks indicate that the possibility of buried and intact cultural materials in the immediate area of the isolate is low.

Isolate: U-01-AY-0060(f,i)-2

Location: C/W/NE/SW/SW/SE 1/4 of Section 35, T5S R5W (Figure 3)

Setting: Isolate U-01-AY-0060(f,i)-2 is situated on the crest of a ridge. A existing two track road, and the proposed access and pipeline are situated 100 feet (30.4 m) west of the isolate. A pinyon pine and juniper community with a understory of low sagebrush, rabbit brush, bunchgrasses and prickly pear cactus dominate the site area. Sediments consist of a mixture of colluvial silty sands mixed with residual pieces of Uintah

formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<10 cm). The elevation varies between 7390 feet (2253 m) AMSL.

Description: The isolate consists of four pieces of chipped stone debitage. The debitage consists of three primary and one secondary flake. The debitage is made from a local tan/light brown (banded) chert.

No additional artifacts (projectile points, chipped and/or ground stone tools) and/or features (firepits, cairns) were found in association with the isolate. The isolate is not considered to be significant. Eroding slopes and cut banks indicate that the possibility of buried and intact cultural materials in the immediate area of the isolate is low.

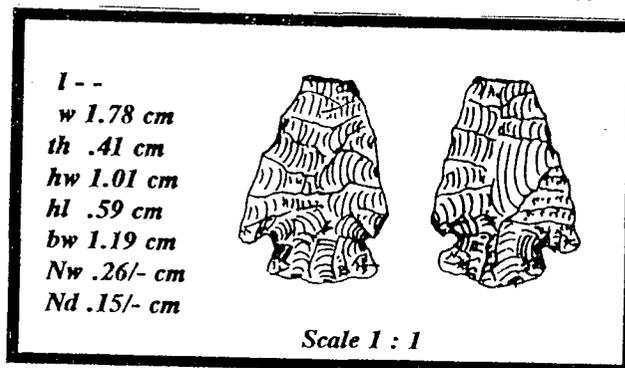

Isolate: U-01-AY-0060(f,i)-3

Location: NE/NE/NE/NE/SE/NW 1/4 of Section 2, T6S R5W (Figure 3)

Setting: Isolate U-01-AY-0060(f,i)-3 is situated on the top of a hill. A existing two track road, and the proposed access and pipeline are situated 50 feet (15.2 m) west of the isolate. The area surrounding the isolate has been chained. Vegetation consists of low sagebrush, rabbitbrush, bunchgrasses and prickly pear cactus. Pinyon pine and juniper community with a understory of low sagebrush, rabbit brush, bunchgrasses and prickly pear cactus dominate the surrounding landscape. Sediments consist of a mixture of colluvial silty sands mixed with residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<15 cm). The elevation varies between 7440 feet (2268.2 m) AMSL.

Description: Isolate U-01-AY-0060(f,i)-3 is a projectile point made from a dark grey chert (Figure 11). The tip and one of the ears is broken and the point exhibits corner notches. The point is similar in morphological characteristics to a archaic 'Elko' corner notch style.

Figure 11. Isolate U-01-AY-60(f,i)-3 Projectile point illustration.

No additional artifacts (projectile points, chipped and/or ground stone tools) and/or features (firepits, cairns) were found in association with the isolate. The isolate is not considered to be significant. Eroding slopes and cut banks indicate that the possibility of buried and intact cultural materials in the immediate area of the isolate is low.

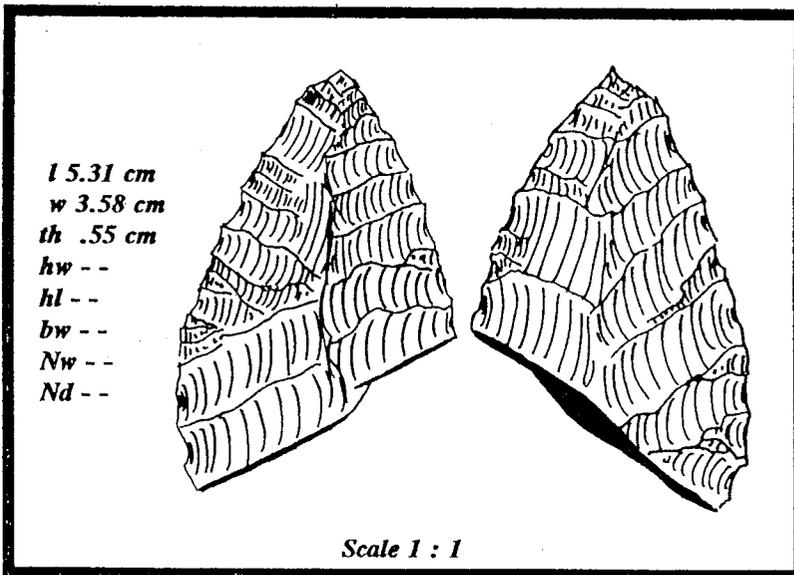

Isolate: U-01-AY-0060(f,i)-4

Location: SW/SW/NW/SE/SW/NE 1/4 of Section 1, T6S R5W (Figure 3)

Setting: Isolate U-01-AY-0060(f,i)-4 is situated on the eastern crest of a large southwest-northeast trending ridge. The proposed access and pipeline are situated 50 feet (15.2 m) west of the isolate. The area surrounding the isolate has been chained. Vegetation consists of low sagebrush, rabbitbrush, bunchgrasses and prickly pear cactus. Pinyon pine and juniper community with a understory of low sagebrush, rabbit brush, bunchgrasses and prickly pear cactus dominate the surrounding landscape. Sediments consist of a mixture of colluvial silty sands mixed with residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<15 cm). The elevation varies between 7365 feet (2245.4 m) AMSL.

Description: Isolate U-01-AY-0060(f,i)-4 is a biface made from a grey chert (Figure 12). The biface has been broken crosswise across the blade.

Figure 12. Isolate U-01-AY-0060(f,i)-4 biface illustration.

No additional artifacts (projectile points, chipped and/or ground stone tools) and/or features (firepits, cairns) were found in association with the isolate. The isolate is not considered to be significant. Eroding slopes and cut banks indicate that the possibility of buried and intact cultural materials in the immediate area of the isolate is low.

Isolate: U-01-AY-0060(f,i)-5

Location: C/S/SW/SW/NE 1/4 of Section 1, T6S R5W (Figure 3)

Setting: Isolate U-01-AY-0060(f,i)-5 is situated on the eastern crest of a large southwest-northeast trending ridge. The proposed access and pipeline are situated 50 feet (15.2 m) west of the isolate. The area surrounding the isolate has been chained. Vegetation consists of low sagebrush, rabbitbrush, bunchgrasses and prickly pear cactus. Pinyon pine and juniper community with a understory of low sagebrush, rabbit brush, bunchgrasses and prickly

pear cactus dominate the surrounding landscape. Sediments consist of a mixture of colluvial silty sands mixed with residual pieces of Uintah formation sandstone, clays and shales. Eroding slopes and cut banks indicate that sediments are shallow (<15 cm). The elevation varies between 7475 feet (2278.9 m) AMSL.

Description: Isolate U-01-AY-0060(f,i)-5 consists of three pieces of chipped stone debitage. The debitage is represented by one secondary and two tertiary flakes made from a white/tan chert.

No additional artifacts (projectile points, chipped and/or ground stone tools) and/or features (firepits, cairns) were found in association with the isolate. The isolate is not considered to be significant. Eroding slopes and cut banks indicate that the possibility of buried and intact cultural materials in the immediate area of the isolate is low.

### Recommendations

A total of 186.94 acres were surveyed for cultural resources within and around the proposed Barrett Resources Corp. Federal well locations, their access and pipeline listed in Table 1 (Figure 3). Ninety-four percent of the area surveyed, 175.4 acres (80 block, 95.4 linear), was surveyed on USFS land. Six percent of the area surveyed, 11.48 linear acres, was surveyed on Uintah-Ouray Ute tribal lands.

Five sites (42DC283, 42DC284, 42DC285, 42DC287 and 42DC288) were previously recorded in or adjacent to the project area (Figure 2). Sites 42DC283 and 42DC284 were previously recorded a small low density lithic scatter. Both sites 42DC283 and 42DC284 could not be relocated by AIA.

Site 42DC285 has been recorded, mapped, but not tested. The site is a low density lithic scatter and is not considered eligible for nomination and/or inclusion to the NRHP. Site 42DC285 is situated 15 m south of staked proposed Federal #6-2-65 well pad. The proposed access and pipeline, parallel a existing two track road, and cross through the western edge of the site. The subsequent construction of the proposed access and pipeline will not impact any significant contributing elements of site 42DC285.

Site 42DC287 and 42DC288 were revisited by AIA. Both sites were incooperated into one site 42DC287. The site is a large low density scatter of chipped and ground stone tools and chipped stone debitage. The site is not considered eligible for nomination and/or inclusion to the NRHP. The proposed access and pipeline, parallel a existing two track road, and cross through the east side of the site. The subsequent construction of the proposed access and pipeline will not impact any significant contribution elements of site 42DC287.

Five isolates were recorded during the survey. Two of the isolates (U-01-AY-0060(f,i)-1 and 2) were located on Uintah-Ouray

Ute tribal lands. The remainder of the isolates (U-01-AY-0060(f,i)-3, 4 and 5) were located on USDA Ashley National Forest lands. None of the isolates will be impacted by subsequent construction of the proposed Federal wells, their access and pipeline listed in Table 1.

No additional cultural materials were recorded during the survey. No significant cultural materials (sites, isolates) will be impacted by subsequent construction of the proposed Barrett Resources Corp. Federal wells, their access and pipeline listed in Table 1. Therefore, no additional archaeological work is necessary and clearance is recommended for construction of the proposed Barrett Res. Corp. Federal wells, their access and pipeline listed in Table 1.

**APPLICATION FOR GRANT OF CORRIOR RIGHT-OF-WAY**

**BERRY PETROLEUM COMPANY**, having a resident or principal place of business at **1614 South, 2000 West, Route 3 Box 3020, Roosevelt, Utah, 84066**, hereby files an application with the Bureau of Indian Affairs, pursuant to the terms and provisions of the Act of February 5, 1948 (62 Stat. 17; 25 U.S.C. 323), and to the regulations of the Department of the Interior contained in Title 25, Code of Federal Regulations, Part 169, for the grant of a Right-of-Way for the following purposes and reasons:

To construct a Road & Pipeline Corridor for the FEDERAL 6-2-65

Across the following described Indian Lands SW ¼ SE ¼ & E ½ SE ¼ OF SECTION 35, T5S, R5W, U.S.B.& M.

Corridor R-O-W = 1.610 Ac.

Total Acreage = 1.610 Acres

(Road & Pipeline) **3" SDR-11 POLY PIPELINE**

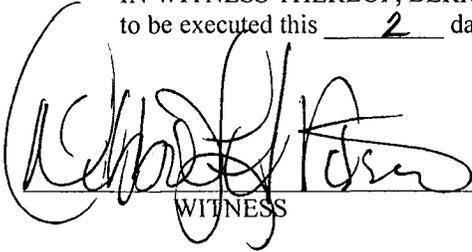

Said Pipeline Right-of-Way to be approximately 2,337.15 feet in length, 30 feet in width, and 1.610 Acres, and more particularly described and shown on the map of definite location to be attached and made a part hereof.

The applicant understands and hereby expressly agrees to the following stipulations:

- (a) To construct and maintain the Right-of-Way in a workmanlike manner.
- (b) To pay promptly all damages and compensation, in addition to the deposit made pursuant to 169.4 determined by the Secretary to be due the landowners and authorized users and occupants of the land on account of the survey, granting, construction and maintenance of the Right-of-Way.
- (c) To indemnify the landowners and authorized users and occupants against any liability for loss of life, personal injury and property damage arising from the construction, maintenance, occupancy or use of the lands by the applicant, his employees, contractors and their employees or subcontractors and their employees.
- (d) To restore the lands as nearly as may be possible to their original condition upon the completion of the construction to the extent compatible with the purpose for which the Right-of-Way was granted.
- (e) To clear and keep clear the lands within the Right-of-Way to the extent compatible with the purpose of the Right-of-Way; and to dispose of all vegetative and other material cut, uprooted, or otherwise accumulated during the construction and maintenance of the project.
- (f) To take soil and resource conservation and protection measures, including weed control, on the land covered by the Right-of-Way.
- (g) To do everything reasonable within its power to prevent and suppress fires on or near the lands to be occupied under the Right-of-Way.
- (h) To build and repair such roads, fences, and trails as may be destroyed or injured by construction work and to build and maintain necessary and suitable crossings for all roads and trails that intersect the works constructed, maintained, or operated under the Right-of-Way.

- (I) That upon revocation or termination of the Right-of-Way, the applicant shall, so far as is reasonably possible, restore the land to its original condition.
- (j) To at all times keep the Secretary informed of its address, and in case of corporation of the address of its principal officers.
- (k) That the applicant will not interfere with the use of the lands by or under the authority of the landowners for any purpose not inconsistent with the primary purpose for which the Right-of-Way is granted.

IN WITNESS THEREOF, BERRY PETROLEUM COMPANY, has caused this instrument to be executed this 2 day of February, 2004.

Re: Federal 6-2-65 Well, 1980' FNL, 1980' FWL, SE NW, Sec. 2, T. 6 South,  
R. 5 West, Duchesne County, Utah

Gentlemen:

Pursuant to the provisions and requirements of Utah Code Ann. § 40-6-1 *et seq.*, Utah Administrative Code R649-3-1 *et seq.*, and the attached Conditions of Approval, approval to drill the referenced well is granted.

This approval shall expire one year from the above date unless substantial and continuous operation is underway, or a request for extension is made prior to the expiration date. The API identification number assigned to this well is 43-013-32557.

Sincerely,

John R. Baza  
Associate Director

**Operator:** Berry Petroleum Company  
**Well Name & Number** Federal 6-2-65  
**API Number:** 43-013-32557  
**Lease:** USA UTU-77326

**Location:** SE NW                      **Sec. 2**                      **T. 6 South**                      **R. 5 West**

### Conditions of Approval

1. General

Compliance with the requirements of Utah Admin. R. 649-1 *et seq.*, the Oil and Gas Conservation General Rules, and the applicable terms and provisions of the approved Application for permit to drill.

2. Notification Requirements

Notify the Division within 24 hours of spudding the well.

- Contact Carol Daniels at (801) 538-5284.

Notify the Division prior to commencing operations to plug and abandon the well.

- Contact Dan Jarvis at (801) 538-5338

3. Reporting Requirements

All required reports, forms and submittals will be promptly filed with the Division, including but not limited to the Entity Action Form (Form 6), Report of Water Encountered During Drilling (Form 7), Weekly Progress Reports for drilling and completion operations, and Sundry Notices and Reports on Wells requesting approval of change of plans or other operational actions.

4. State approval of this well does not supersede the required federal approval, which must be obtained prior to drilling.

5. This proposed well is located in an area for which drilling units (well spacing patterns) have not been established through an order of the Board of Oil, Gas and Mining (the "Board"). In order to avoid the possibility of waste or injury to correlative rights, the operator is requested, once the well has been drilled, completed, and has produced, to analyze geological and engineering data generated therefrom, as well as any similar data from surrounding areas if available. As soon as is practicable after completion of its analysis, and if the analysis suggests an area larger than the quarter-quarter section upon which the well is located is being drained, the operator is requested to seek an appropriate order from the Board establishing drilling and spacing units in conformance with such analysis by filing a Request for Agency Action with the Board.

Lease Number: UTU - 77326

Location: SENW Sec. 02 TWN: 06S RNG: 05W

Agreement: N/A

For more specific details on notification requirements, please check the Conditions of Approval for Notice to Drill and Surface Use Program.

CONDITIONS OF APPROVAL FOR NOTICE TO DRILL

Approval of this application does not warrant or certify that the applicant holds legal or equitable title to those rights in the subject lease, which would entitle the applicant to conduct operations thereon.

**Submit an electronic copy of all logs run on this well in LAS format. This submission will replace the requirement for submittal of paper logs to the BLM.**

Be aware fire restrictions may be in effect when location is being constructed and/or when well is being drilled. Contact the appropriate Surface Management Agency for information.

A. DRILLING PROGRAM

1. Casing Program and Auxiliary Equipment

As a minimum, the usable water and other valuable resources shall be isolated and/or protected by having a cement top for the production casing at least 200 ft. above the top of the Green River Formation, identified at  $\pm 1,787$  ft.

2. Other Information

In the event after-hours approvals are necessary, please contact one of the following individuals:

Kirk Fleetwood                      (435) 828 -7874 (CELL)  
Petroleum Engineer

Michael Lee                              (435) 828 -7875 (CELL)  
Petroleum Engineer

BLM FAX Machine                      (435) 781-4410

Berry Petroleum Company (Berry) shall follow the Multipoint Surface Use and Operations Plan of their Application for Permit to Drill (APD). Berry is responsible under the terms of the lease for operations conducted upon the leased lands.

The Forest Service has listed the following additional Conditions of Approval for well Federal 6-2-65:

**Timing Restriction on Activities.** Site preparation, drilling, road construction, pipe installation, and reclamation on Forest administered land will not occur between November 1 and April 1, or May 15 and August 1.

If the well goes into production, noise-reducing equipment (e.g. mufflers) will be installed on any necessary engines or compressors to reduce noise disturbance.

The nearby guzzler will not be removed.

A cattle guard will be constructed and installed, where the new access road crosses the Tribal/Forest Service boundary.

If paleontological resources (fossils) are discovered, during construction or operation of the proposed well, its access road, or pipeline, they will be left in place and undisturbed, and the Forest Service will be notified.

Water to be used for drilling and drilling-related purposes must be obtained from a valid current water right, such that there is no net depletion of waters per the Colorado River Compact.

Road treatments may be required, for surface protection or dust control. The Forest Service must approve treatment options before implementation.

Equipment may not be operated when excessive damage to roads or other resources will occur. If excessive erosion or rutting occurs, the Forest Service may close the access roads until resource damages can be corrected or mitigated. Hauling of heavy loads or heavy equipment will be avoided to the extent possible during wet soil conditions.

The Forest Service will require reclamation (contouring and appropriate revegetation) of disturbed areas that are no longer needed for production operations (following well drilling and development, but prior to final reclamation).

All chemicals and potentially hazardous materials to be used at the site will be transported and stored in accordance with DOT and EPA regulations.

Final site reclamation will include re-establishment of appropriate stabilizing vegetation, as approved by the Forest Service. When the operator decides to abandon this well, the operator must submit for approval a specific reclamation plan prior to final reclamation operations.

The Forest Service retains the authority to identify drainage or erosion problems, or other resource damages, and to require corrective actions to mitigate such problems until final reclamation of the site is complete.

ACTION CODES:

- A - Establish new entity for new well (single well only)
- B - Add new well to existing entity (group or unit well)
- C - Re-assign well from one existing entity to another existing entity
- D - Re-assign well from one existing entity to a new entity
- E - Other (Explain in 'comments' section)

Dear Oil & Gas Supervisor:

Enclosed is the final computer colored log for the above referenced well.

We appreciate the opportunity to be of service to you and look forward to working with you again in the near future.

If you have any questions regarding the enclosed data, please contact us.

Sincerely,

Bill Nagel

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Please be advised that the Federal 06-02-65 was spud on April 4, 2005.

 Induction log, dated 4/15/2005.

\*\*\*\*\*

PROGRAM:

- 1) Install surface production equipment and pumping unit.
- 2) NU frachead & BOPE. Load hole.
- 3) MIRU wireline w/ mast pole. Run GR/CCL/CBL from PBTD to TOC. Verify PBTD &  
 acceptable cmt bond across zones to be completed. **Make sure that CBL is run to a  
 shallow enough depth so that the TOC can be identified.** Test csg to 2,000 psi.  
 Contact Denver if CBL or pressure test unsatisfactory. Note that the TOC should be at  
 least at 1,180' (200' above the top of the Green River) for a sufficient bond. If  
 acceptable, proceed and perf the following **Uteland Butte** intervals @ 2 jspf w/ 19 gm  
 charges, 0.40" dia. holes:
 

|                            |                            |
|----------------------------|----------------------------|
| 5,696' - 98' (2', 4 holes) | 5,728' - 31' (3', 6 holes) |
| 5,703' - 05' (2', 4 holes) | 5,738' - 40' (2', 4 holes) |
| 5,710' - 12' (2', 4 holes) | 5,760' - 63' (3', 6 holes) |
| 5,718' - 22' (4', 8 holes) | 5,778' - 80' (2', 4 holes) |
| (Total 20', 40 holes)      |                            |
- 4) RU Halliburton & frac down csg per Halliburton design f/ Interval 1. Tail-in +/- 250  
 gals. 7 1/2% HCl acid in flush to cover next perf interval. SD & record ISIP. RD frac  
 equip f/ wellhead.
- 5) RU wireline. RIH w/ 5 1/2" solid composite plug; run in tandem w/ 4" csg gun(s). Set  
 plug @ +/- 5,500' Perf the following **Lower Castle Peak** intervals @ 2 jspf, w/ 19 gm  
 charges, 0.40" dia. holes:
 

|                            |                            |
|----------------------------|----------------------------|
| 5,294' - 96' (2', 4 holes) | 5,381' - 83' (2', 4 holes) |
| 5,311' - 13' (2', 4 holes) | 5,386' - 88' (2', 4 holes) |
| 5,322' - 24' (2', 4 holes) | 5,400' - 03' (3', 6 holes) |
| 5,368' - 70' (2', 4 holes) | 5,458' - 60' (2', 4 holes) |
| 5,374' - 77' (3', 6 holes) |                            |
| (Total 20', 40 holes)      |                            |
- 6) RU Halliburton & frac down csg per Halliburton design f/ Interval 2. Tail-in +/- 250  
 gals. 7 1/2% HCl acid in flush to cover next perf interval. SD & record ISIP. RD frac  
 equip f/ wellhead.

- 7) RU wireline. RIH w/ 5 1/2" solid composite plug; run in tandem w/ 4" csg gun(s). Set plug @ +/- 5,240' Perf the following **Black Shale** intervals @ 4 jspf, w/ 19 gm charges, 0.40" dia. holes:
  - 5,202' - 04' (2', 8 holes)
  - 5,207' - 09' (2', 8 holes)
  - 5,218' - 26' (8', 32 holes)
  - (Total 12', 48 holes)
- 8) RU Halliburton & frac down csg per Halliburton design f/ Interval 3. Tail-in +/- 250 gals. 7 1/2% HCl acid in flush to cover next perf interval. SD & record ISIP. RD frac equip f/ wellhead.
- 9) RU wireline. RIH w/ 5 1/2" solid composite plug; run in tandem w/ 4" csg gun(s). Set plug @ +/- 4,850' Perf the following **Douglas Creek I7** intervals @ 4 jspf, w/ 19 gm charges, 0.40" dia. holes:
  - 4,766' - 76' (10', 40 holes)
  - (Total 10', 40 holes)
- 10) RU Halliburton & frac down csg per Halliburton design f/ Interval 4. Tail-in +/- 250 gals. 7 1/2% HCl acid in flush to cover next perf interval. SD & record ISIP. RD frac equip f/ wellhead.
- 11) RU wireline. RIH w/ 5 1/2" solid composite plug; run in tandem w/ 4" csg gun(s). Set plug @ +/- 4,700' Perf the following **Douglas Creek I4.5** intervals @ 4 jspf, w/ 19 gm charges, 0.40" dia. holes:
  - 4,584' - 94' (10', 40 holes)
  - (Total 10', 40 holes)
- 12) RU Halliburton & frac down csg per Halliburton design f/ Interval 5. SD, record ISIP, and RD frac equip. Open well to pit ASAP and force close frac. Leave well flowing to pit.
- 13) MIRU. PU 2 7/8" tbg w/ bit & scraper. RIH w/ tbg to top of plug. Drill out plug. Repeat for 2<sup>nd</sup>, 3<sup>rd</sup>, and 4<sup>th</sup> plugs. CO to PBTD & circ hole clean. POH & LD bit & scraper.
- 14) PU NC & SN & 5 1/2" anchor catcher and RIH to mid-perf. RU swab. Swab until hole clean of sand. Verify hole clean to PBTD.
- 15) Pull up & Set anchor catcher. ND BOPE & frac head. NU tbg head & flow tee. RIH w/ pump & rod string. Seat pump & space out. Fill tbg & test to 500psi. Hang on clamps. Start well pumping. RD & MO.

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

**Please be advised that the Federal 06-02-65 went to sales on April 30, 2005.**

29. Disposition of Gas (Sold, used for fuel, vented, etc.)

30. Summary of Porous Zones (Include Aquifers):

Show all important zones of porosity and contents thereof: Cored intervals and all drill-stem tests, including depth interval tested, cushion used, time tool open, flowing and shut-in pressures and recoveries.

31. Formation (Log) Markers

| Formation | Top | Bottom | Descriptions, Contents, etc. | Name              | Top         |
|-----------|-----|--------|------------------------------|-------------------|-------------|
|           |     |        |                              |                   | Meas. Depth |
|           |     |        |                              | Base Mahogany     | 2657        |

|           |     |        |                              | Top Wasatch       | 5,896       |

32. Additional remarks (include plugging procedure):

33. Indicate which items have been attached by placing a check in the appropriate boxes:

- Electrical/Mechanical Logs (1 full set req'd.)   
  Geologic Report   
  DST Report   
  Directional Survey  
 Sundry Notice for plugging and cement verification   
  Core Analysis   
  Other:

34. I hereby certify that the foregoing and attached information is complete and correct as determined from all available records (see attached instructions)\*

12. DESCRIBE PROPOSED OR COMPLETED OPERATIONS. Clearly show all pertinent details including dates, depths, volumes, etc.

Notice of Change of Operator from Berry Petroleum Company, LLC to Linn Operating, Inc., effective June 1, 2014. On December 16, 2013, Berry Petroleum Company became an indirect subsidiary of Linn Energy, LLC. As a result, Berry Petroleum Company converted into a limited liability company named, "Berry Petroleum Company, LLC". On March 5, 2014, Berry Petroleum Company, LLC authorized and empowered Linn Operating, Inc. to act as operator on its behalf. I have attached a copy of the original declaration amending the name change along with a copy of the agency agreement and power of attorney for the operator change.

12. DESCRIBE PROPOSED OR COMPLETED OPERATIONS. Clearly show all pertinent details including dates, depths, volumes, etc.

On December 16th, 2013 Berry Petroleum Company and Linn Energy merged. As a result of this merger the companies name has changed to "Berry Petroleum Company, LLC". On March 5th, 2014 Berry Petroleum Company, LLC agreed that Linn Operating, Inc would become the operator of record effective June 1, 2014. I have attached a copy of the original declaration amending the name change along with a copy of the agency agreement and power of attorney for the operator change.

Should you have any questions please don't hesitate to contact me.
