RIGHT-OF-WAY AND EASEMENT AGREEMENT
FOR STATE TRIBAL 5-18-54 WELL SITE and
ACCESS ROAD

THIS RIGHT-OF-WAY EASEMENT AND AGREEMENT is between the UTAH DIVISION OF WILDLIFE RESOURCES of 1594 West North Temple, Suite 2110, Salt Lake City, Utah 84114-6301 (“DWR”), and UTE/FNR LLC, located at 410 17th Street, Suite 900, Denver Colorado, 80202 (“UTE/FNR”).

WHEREAS, the DWR owns certain real property known as the Indian Canyon Wildlife Management Area (the “Property”) located in Duchesne County, in Northeastern Utah; and

WHEREAS, UTE/FNR is desirous of obtaining a right-of-way easement on the Property for the purpose of access to certain portions of the Brundage Canyon Field to facilitate the drilling and production of an oil & gas well by constructing an access road (the “Access Road”) and a well site pad (the “Well Site”); collectively the access road and well site are referred to as “the Project”; and

WHEREAS, DWR and UTE/FNR are collectively referred to herein as “the Parties;” and

WHEREAS, the Parties desire to enter into this Right-of-Way and Easement Agreement (“the Agreement”) wherein DWR grants to UTE/FNR an easement (“Easement”) for the Project, shown on Exhibit A over DWR lands.

NOW THEREFORE, in exchange for mutual consideration, as described below, the Parties agree as follows:

A. Easement Location and Description. Location and legal descriptions of the Easement for the Project is as follows:

1. The Access Road: A 30 foot wide right-of-way, 15 feet on each side of a 1,564.97 foot long centerline as shown by the metes and bounds description in Exhibit A within the S/2 NW/4 of Section 18, T5S, R4W, U.S.B.& M.
2. The Well Site: A 1.993-acre tract located in the SW/4 NW/4 of Section 18, T5S, R4W, U.S.B.& M.

B. Terms and Conditions. DWR hereby grants an Easement over and across the above described lands to UTE/FNR, subject to the following terms and conditions, and the conditions contained within **Exhibit B UTE/FNR ”MULTI POINT SURFACE USE & OPERATIONS PLAN”** attached:

1. Project Description. This Easement is for the purpose of constructing a standard access road for general access to a drill site and constructing a drill pad for the drilling, completing and production operations of an oil and gas well. The well is designated as **State Tribal # 5-18-54.**
2. Ingress and Egress. This Easement includes reasonable right of continued ingress and egress over and upon the Project for the purposes of construction, installation, operations and maintenance.
3. Minimizing Surface Disturbance. Excavation, construction, installation, and maintenance operations contemplated herein are to be carried out in a manner to insure minimum disturbance to the Property within and adjacent to the Easement.

4. Project Area Restoration. Upon conclusion of construction, installation, drilling, completion and testing operations of the Project all disturbed lands not required for continuous use will be graded and, so far as reasonably possible, restored to original conditions. All existing fences, gates and other structures that may have been damaged, or may be damaged during the term of the Easement, will be restored to as close to original condition as practicable.

5. Re-vegetation. UTE/FNR will re-establish a successful vegetation cover by seeding all disturbed areas not required for continuous use or operations with a seed mixture and density of distribution specified by DWR. The seed mixture will consist of shrubs, forbs and grasses, similar in nature to the pre-existing vegetation surrounding the disturbed site. UTE/FNR will not be excused from this obligation until DWR has inspected the site and determined that the re-vegetation is successful.

6. Noxious Weeds. In the event Project Activities result in noxious weed problems during the life of the Easement or after this Easement is terminated, UTE/FNR will be responsible for the costs of controlling said noxious weeds until DWR is satisfied with the results, and that DWR has released UTE/FNR from further noxious weed control obligations. Obtaining approved procedures and required permits to control the noxious weeds will be the responsibility of UTE/FNR.

7. Flood or Fire. DWR assumes no responsibility or liability for damages and losses to the Easement or any UTE/FNR facilities as a result of a natural flood event or a wild range fire. However, UTE/FNR shall bear full cost and responsibility for flood and erosion damage that is proximately caused by the Easement development. Further, UTE/FNR shall bear full cost and responsibility for wild fires that are the result of the project.

8. Project Costs. All third party costs for the Project, including surveys, cultural and archeological surveys, threatened and endangered species surveys, which may be required prior to construction and any re-vegetation of disturbed sites and restoration of all structures, will be borne exclusively by UTE/FNR.

9. Operation & Maintenance Responsibility. UTE/FNR is responsible for operating and maintaining the Project.

10. Compliance with Existing Laws. UTE/FNR agrees to comply with all associated U.S. Environmental Protection Agency (EPA) and Utah Division of Oil Gas and Mining (DOG M) rules, regulations, and any other laws, rules or policies governing the construction, operation, and maintenance of the Project.

11. Spill Contingency and Control Plan. Before operations can commence the operator (UTE/FNR) shall file a Spill Contingency and Control Plan DWR. The plan must identify the potential for spills to occur, activities that could result in spills, substances that could be spilled, identify appropriate containment/cleanup actions, and identify equipment/materials to be maintained in vehicles and at the drilling pad to contain or neutralize spilled materials. The plan must identify potentially affected parties, required contacts, and time frames for cleanup in the event of a spill. The plan must be consistent with the United States Environmental Protection Agency Region VIII Oil and Hazardous Substances Regional Contingency Plan.

12. Construction Timing. Activities relating to the construction and completion of the well and pipelines may not be conducted during the period of December 1st through April 15th of any year, without express written consent of DWR. Said consent is to be obtained from the

Northeastern Regional Manager, in Vernal, UT. UTE/FNR will suspend operations during the general rifle deer hunt from two hours before sunset until two hours after sunrise. UTE/FNR will be permitted to have a person on site at all times to monitor equipment. The exception would be if drilling has not been completed, which would make suspending operations impractical, drilling operations shall be allowed around the clock to complete the project by the winter seasonal closure.

13. Indemnification. UTE/FNR agrees to protect, indemnify, save and hold harmless DWR, its agents and employees, from and against all claims, demands, damages, and causes of action of every kind or character on account of bodily injuries, death, or damage to property arising because of, for, out of, or in any way connected with the performance of UTE/FNR under this Agreement, except where such injury, death, or damage has resulted from the negligence of DWR without negligence or willful act on the part of UTE/FNR, its agents, employees, or subcontractors. UTE/FNR shall defend all suits brought upon such claims and pay all costs and expenses incidental thereto, but DWR shall have the right, at its option, to participate in the defense incidental thereto without relieving UTE/FNR of any obligation hereunder.

14. Easement Term. This Easement shall be for a term of 30 years beginning on the date when all signatures have been affixed. The Easement may be renewed or re-negotiated at any time 6-months prior to its expiration. Such application for renewal or re-negotiation shall be subject to DWR's policy in force at that time.

15. Cancellation. The Easement may be canceled by DWR for failure of UTE/FNR to abide by any of the terms and conditions set forth herein, after UTE/FNR has been given notice of such default, and if UTE/FNR fails to correct the default within 30 days after receipt of the notice. The Easement may be canceled by UTE/FNR upon 60 days notice to DWR.

16. Removal and Recovery. At such time as the Project will no longer be used by UTE/FNR or its assigns, UTE/FNR or its assigns will remove from the Property all equipment and facilities associated with the Project and recover all impacted land including both the access road and the well site and its vegetative cover in accordance with established laws, procedures, policies, guidelines and as set forth in the above terms and conditions B 4 & 5 above. Said removal and restoration shall be completed within 9 months from the time UTE/FNR has determined the Project will no longer be used. At such time as the Project is no longer operational and has been restored to its natural condition, this Easement as to the Project shall be deemed terminated without cost, loss, or reimbursement by the DWR to UTE/FNR for the Easement or any part/portion thereof.

17. Transfer of Easement Privileges and Terms. The privileges, rights, terms and conditions of this Agreement shall apply to any party, its heirs and assigns to the above described facilities from UTE/FNR

18. Bonding. Prior to construction of the access road or well pad, UTE/FNR shall provide DWR with a Reclamation Bond (the "Bond") in the amount of **\$15,000.00** for road and drilling pad reclamation at such time as when UTE/FNR (its heirs and assigns) are no longer using, or have abandoned the Easement. The Bond shall be payable to the "Utah Division of Wildlife Resources" and conditioned upon the faithful performance by UTE/FNR of its duty to reclaim the contour and vegetation on affected areas in and around the Easement to a condition equal to or better than the wildlife habitat adjacent to the Easement or in its vicinity.

Bond liability shall remain in full force and effect until liability thereunder is released by DWR.

The Bond value may be reviewed over the life of the Easement to determine if adjustments are required for inflation. In the event it is determined that an adjustment is required, DWR shall provide written notification to UTE/FNR, its heir's or assigns of the need to upgrade the bond in an amount required to reclaim the site.

In the event the Parties choose to establish a "Field Bond" to secure reclamation of several well sites, roads and pipelines, the "Field Bond" shall be in lieu of the above-identified Bonding requirement (paragraph B.14). The executed Field Bond will be attached hereto and included by reference.

C. Right-of-Way Easement Fee.

The Fee for this Right-of-Way and Easement Agreement is **\$1,986.60** (road computed at 94.85 rods @ \$12.00 per rod = \$1,138.20) and (well site computed at 1.993 acres @ \$425.69 per acre = \$848.40). Payment is due when UTE/FNR returns this Agreement to DWR appropriately signed and notarized.

All payments are final. There shall be no pro rata reimbursement of any payments hereunder should the Project outlined under this Agreement terminate before its term has lapsed.

IN WITNESS WHEREOF, the Parties accept the terms and conditions of this Agreement and Easement, on the 14th day of June, 2006.

Standard Operating Practices
August 1, 2005

MULTI-POINT SURFACE USE & OPERATIONS PLAN

All surface use will adhere to the surface owner Right-of-Way Agreement.

1. Existing Roads:

The location of individual wells, any proposed access, and any existing access roads will be clearly displayed on maps provided for site specific APD's.

Any road improvements requested in the surface owner Right-of Way Agreement will be proposed in the site specific APD.

All existing access roads will be maintained during drilling, completion, and production operations. Any necessary fill material for road repair will be hauled in from private sources.

2. Planned Access Roads:

A description of all proposed access roads, including the length, to be used for a site specific location will be included with individual APD's. The proposed access road will be centerline staked and flagged during the initial staking process to ensure proper placement of the access road. New access roads will be constructed to the required specifications of the Right-of-Way Agreement, and a copy of the Right-of-Way Agreement will be attached to each site specific APD. Any additional surface disturbance, not included in the site specific APD, will be approved prior to such disturbance.

New access roads will have a usable surface of at least eighteen (18) feet to provide enough area for vehicles to meet and pass safely. They will be crowned, ditched, and constructed with a maximum disturbed width of thirty (30) feet. If necessary, all snow will be removed and the area allowed to dry prior to any construction. Rock and/or gravel will be used as necessary to construct safe, all-weather roads.

Generally, unless specifically noted in an individual APD, the maximum road grade will be ten (10) percent. If existing gas gathering lines are to be crossed, the gas gathering line will be cased and buried at least one (1) foot below the surface of the road.

There will be no turn-out areas unless necessary for safety reasons.

Road drainage crossings shall be of the typical dry creek drainage crossing type. Crossings will be designed so they will not cause siltation or accumulation of debris in the drainage crossing nor shall the drainages be blocked by the roadbed. Erosion of drainage ditches by runoff water shall

be prevented by diverting water off at appropriate intervals by means of cutouts. Upgrading will not be allowed during muddy conditions. Should mud holes develop, they will be filled and detours around them avoided.

There will be no major cuts and fills, culverts, or bridges unless specifically noted in the individual APD. If road construction determines the need for a culvert or bridge or if future weather conditions change the road topography and create the need for a culvert or bridge, UTE/FNR LLC will request and receive permission from the Utah Division of Wildlife Resources. No road construction work will occur prior to receipt of approval.

Rock and/or gravel will be purchased and hauled in from private sources should additional surface material be needed.

Unless specifically noted in a site specific APD, there will be no gates, cattle guards, fence cuts, or modifications to existing facilities.

All travel will be confined to the new and existing access road Rights-of Way.

Snow will be removed from the road to areas where snowmelt will occur away from the road. If holes or depressions occur due to heavy traffic, snow removal, or muddy conditions, said holes will be filled promptly with rock and/or gravel to ensure safe traffic flow.

The disturbed area of the access road will be frequently policed to ensure any type of trash is removed promptly.

There may be areas of the road which need to be wider due to the size of the necessary equipment used in the drilling and completion processes. Intersections, sharp curves, and switch-backs, as well as their respective construction areas, will be noted on the individual APD's

3. Location of Existing Wells Within a 1-Mile Radius:

A map will be provided with the site specific APD showing the location of existing wells within a one mile radius.

4. Location of Tank Batteries, Production Facilities, and Production Gathering and Service Lines:

All permanent (on site for six (6) months or longer) structures constructed or installed (including pumping units) will be painted a flat, non-reflective, earthtone color. Facilities required to comply with O.S.H.A. (Occupational Safety and Health Act) will be excluded. The required paint color is desert brown (1OYR 6/4).

A fluid containment berm will surround the production tank(s). The berm will consist of compacted subsoil, not topsoil. The berm shall be capable of containing, at a minimum, the entire contents of the largest single tank, separator, treater, or line heater in use, plus ten (10%) freeboard for precipitation.

A copy of the written Spill Prevention, Control, and Countermeasure (SPCC) Plan will be maintained in the nearest field office and will be available for administrative review during normal business hours.

A gas pipeline will be required for each well. A map of the proposed pipeline route will be included with the site specific APD. If possible, all meter runs will be within one-hundred (100) feet of the wellhead.

5. Location and Type of Water Supply:

The site specific APD will contain the location and type of water supply to be used during drilling and completion operations.

6. Source of Construction Materials:

Generally, all access roads will be constructed by using material from the approved access road area. Should the road need to be improved after construction, rock and/or gravel will be hauled from private sources.

All site specific locations will be constructed by using material from the approved site specific area. Should additional material be needed, it will be obtained from a private source.

7. Methods of Handling Waste Materials:

Reserve pits will be constructed in such a manner to prevent damage or failure of the reserve pit walls from surface runoff caused by rain or snowmelt. The walls will be constructed in a manner to prevent any type of leakage from the reserve pit. Reserve pits will not be located within natural drainage areas or floodplains unless specified in a site specific APD.

All reserve pits will be lined with a synthetic reinforced liner, a minimum of 12 millimeters thick, with sufficient bedding, either straw or dirt, to cover any rocks. The liner will overlap the pit walls and be covered with dirt and/or rocks to hold it in place. No trash or other debris that could puncture the liner will be disposed of in the pit.

Any reserve pit leak of any reportable kind will be immediately reported to the State of Utah Oil and Gas Division.

All drilling cuttings, including shale, will be contained and buried in the reserve pit.

All drilling fluids, including salts and chemicals, will be contained in the reserve pit. After drilling operations are completed, fluid from the reserve pit will either be hauled to the next drilling location or left within the reserve pit to dry. Hydrocarbons will be removed from the reserve pit after a well has been completed.

Produced water associated with completion operations will either be stored in the reserve pit or in some type of on-site storage tank for a period not to exceed ninety (90) days

Produced oil and water will be stored in tanks. All produced water will be disposed of at a permanent disposal facility authorized by the State of Utah Oil and Gas Division. No produced water will be used for dust or weed control of any kind.

Should any material spills occur, the area of the spill will be re-mediated and impacted soil will be hauled to an approved disposal facility.

A portable toilet will be on location during the drilling of any well.

All garbage, trash, and any other non-human waste materials will be stored in a portable, self-contained, fully enclosed trash container during all drilling operations. There will be no burning of trash on location at any time. After drilling and completion operations are concluded, all trash of any kind will be picked up and removed from location and hauled to an approved disposal facility.

8. Ancillary Facilities:

There are no ancillary facilities planned for at this time, and none are foreseen in the future.

9. Well Site Layout:

A Location Layout Diagram describing drill pad cross-sections, cuts and fills, and locations of mud tanks, reserve pit, flare pit, pipe racks, trailer parking, spoil dirt stockpile(s), and the top soil stockpile(s) will be included with the site specific APD.

The diagram will describe rig orientation, parking areas, and access roads, as well as the location of diversion ditches, if necessary.

All pits will be fenced according to the following minimum standards:

39 inch net wire will be used with at least one strand of barbed wire on top of the net wire (barbed wire is not necessary if pipe or some type of reinforcement rod is attached to the top of the entire fence).

The net wire shall be no more than two (2) inches above the ground. The barbed wire shall be three (3) inches above the net wire. Total height of the fence shall be at least 42 inches.

Corner posts shall be cemented and/or braced in such a manner to keep the fence tight at all times.

Standard steel, wood, or pipe posts shall be used between the corner braces. Distance between any two posts shall be no greater than sixteen (16) feet.

All wire shall be stretched using a stretching device before it is attached to corner posts.

The reserve pit fencing will be on three (3) sides during drilling operations and on the fourth side when the rig moves off location. Pits will be fenced and maintained until cleanup.

Existing fences to be crossed by the access road will be braced and tied off before cutting so as to prevent slacking in the wire.

10. Plans for Restoration of the Surface:

The dirt contractor will be provided with approved copies of the surface use plan and these Standard Operating Practices prior to construction activities.

Prior to the construction of the location if possible, at a maximum, the top twelve (12) inches of soil material will be stripped and stockpiled. Placement of the topsoil will be noted on the location plat attached to the site specific APD. Topsoil will be stockpiled separately from subsoil materials. Topsoil salvaged from the reserve pit will be stockpiled separately near the reserve pit. When all drilling and completion activities have been completed, the unused portion of the location not needed for well servicing or re-completion activities, will be re-contoured and topsoil spread over the area.

Topsoil to be stored for more than one year shall be windrowed, where possible, to a depth of three (3) to four (4) feet at a specified location near the margin of the site.

When restoration activities have been completed, the location site and new access road cuts and shoulders shall be reseeded. Prior to reseeding, all disturbed areas, including the old access road, will be scarified and left with a rough surface.

All seeding associated with any reclamation of a well that is plugged and abandoned shall be completed by November 15th, or before the first permanent snow fall, whichever comes first.

Upon well completion, the location and surrounding area will be cleared of all unused tubing, equipment, debris, materials, and trash not required for production operations.

All pit fencing shall be removed prior to restoration operations. Prior to backfilling the reserve pit, the pit liner will be cut off at the water or mud line and disposed of at an approved landfill site. The pit liner will be torn and perforated after the pit dries.

The reserve pit and that portion of the location not needed for production facilities/operations will be re-contoured to the approximate natural contours. The reserve pit will be reclaimed within one-hundred eighty (180) days, weather permitting, from the date of well completion. Prior to any restoration dirt work, the reserve pit will be completely dry and free of cans, barrels, pipe, etc. Reclamation activities will be completed within sixty (60) days of the date those activities are commenced.

After reserve pit reclamation, no depressions in the soil covering the reserve pit will be allowed. The objective will be to keep seasonal rainfall and runoff from seeping into the soil used to cover the reserve pit. Diversion ditches and water bars will be used to divert runoff as needed.

The reserve pit shall be revegetated by drilling seed on the contour to an appropriate depth. If broadcast seeded, the amount of seed mixture per acre will be doubled, and a harrow or some other implement will be dragged over the seeded area to ensure seed coverage. The Utah Division of Wildlife Resources shall be contacted for the required seed mixture.

Any drainage re-routed during the construction activities shall be restored to its original line of flow or as near as possible

At final abandonment, all casing shall be cut off at the base of the cellar or three (3) feet below final restored ground level, whichever is deeper. The casing will be capped with a metal plate a minimum of 0.25 inch thick. The cap will be welded in place and the well location and identity will be permanently inscribed on the cap. The cap also will be constructed with a weep hole.

11. **Surface Ownership:**

The ownership of the access roads will be specified in the site specific APD.

The ownership of the location will be specified in the site specific APD.

12. **Other Information:**

UTE/FNR LLC will control noxious weeds along Rights-of Way for roads, pipelines, well sites, and other applicable facilities. A list of noxious weeds will be obtained from the County Extension Office. A Pesticide Use Proposal will be submitted and approved prior to the application of herbicides or other pesticides or possibly hazardous chemicals.

13. **Lessee's or Operator's Representative and Certification:**

A. Representative:

Name: Rick L. Parks
Operations Manager

Address: FIML Natural Resources, LLC
410 17th Street, Suite 900
Denver, CO 80202

Phone: (303) 893-5081
Cellular: (303) 229-7689

A complete copy of the approved "Application for Permit to Drill" and the Standard Operating Procedures will be furnished to the field representative(s) to ensure compliance and will be on location during all construction and drilling operations.

B. Certification:

I hereby certify that I, or persons under my direct supervision, have inspected the proposed drill site and access route; that I am familiar with the conditions that presently exist; that the statements made in this plan are, to the best of my knowledge and belief, true and correct; and that the work associated with the operations proposed herein will be performed by UTE/FNR LLC and its contractors and subcontractors in conformity with this plan and the terms and conditions under which it is approved.

EPA's LIST OF NONEXEMPT EXPLORATION AND PRODUCTION WASTES

While the following wastes are nonexempt, they are not necessarily hazardous.

- Unused fracturing fluids or acids
- Gas plant cooling tower cleaning wastes
- Painting wastes
- Oil and gas service company wastes, such as empty drums, drum rinsate, vacuum truck rinsate, sandblast media, painting wastes, spent solvents, spilled chemicals, and waste acids
- Vacuum truck and drum rinsate from trucks and drums, transporting or containing nonexempt waste
- Refinery wastes
- Liquid and solid wastes generated by crude oil and tank bottom reclaimers
- Used equipment lubrication oils
- Waste compressor oil, filters, and blowdown
- Used hydraulic fluids
- Waste solvents
- Waste in transportation pipeline-related pits
- Caustic or acid cleaners
- Boiler cleaning wastes
- Boiler refractory bricks
- Incinerator ash
- Laboratory wastes
- Sanitary wastes
- Pesticide waste
- Radioactive tracer wastes
- Drums, insulation, and miscellaneous solids

DIVISION OF OIL, GAS AND MINING
APPLICATION FOR PERMIT TO DRILL
STATEMENT OF BASIS

OPERATOR: FIML Natural Resources, LLC
WELL NAME & NUMBER: Ute Tribal 5-18-54
API NUMBER: 43-013-32953
LOCATION: 1/4, 1/4 SW/NW Sec: 5 TWP: 05S RNG: 04W 2029 FNL 819 FWL

Geology/Ground Water:

The mineral lease at the proposed location is owned by the Ute Indian Tribe. The BLM is the agency responsible for evaluating and approving the drilling, casing and cement programs.

Reviewer: Brad Hill Date: 11/22/05

Surface:

The Roosevelt Field Office scheduled and performed a presite meeting of the surface area to discuss issues and take input from interested parties concerning the drilling of this well. The Utah Division of Wildlife Resources owns the surface but the minerals are tribal. Ben Williams with UDWR did attend and address wildlife related issues. Mr. Williams claims that UDWR properties were purchased for their values of critical big game habitat with assistance from federal agencies and therefore they have to go through the NEPA process for disturbance on these wells. Mr. Williams explained they do not have a landowner agreement yet, but hope to work through their permitting process ASAP. The Brundage Ridge - Cottonwood Ridge area is classified as critical winter range for deer and elk, and was purchased for that reason. It was stated their landowner agreement will require that disturbance to elk and deer during the winter months be kept to a minimum. This requirement will include no access road construction, location construction, drilling or use of work-over rigs during the period on Nov. 15- March 15 unless written permission is given to vary from any part of this restriction. Opportunities exist to enhance the values for big game in the area by removing pinion and juniper and reseeded with preferred forage species. UTE/FNR has expressed their willingness to participate in wildlife enhancement projects.

Six-tenths miles of new road will be constructed to reach the location. A portion of this road will be on Tribal lands. The new road will dugway along a moderate sideslope to reach the location. The well pad is on gentle terrain and is in a good location for construction and location stability.

REGIONAL/LOCAL SETTING & TOPOGRAPHY

Well site is proposed approximately 26.3 miles +/- southwest of Myton, Utah along Sowers Canyon Road to a Brundage Ridge oil well development road on Tribal lands. Following this road to the existing Ute Tribal 11-18-54 well then along approximately 3400 feet of road to be constructed to the proposed location. The location is on a north-facing bench near the end of Brundage Ridge overlooking Sowers canyon to the north and west. Sowers Canyon contains a perennial stream, which joins Antelope Creek. Antelope Creek flows northerly into the Duchesne River near Bridgeland, Utah. The area consists of a Pinion-Juniper habitat type.

SURFACE USE PLAN

CURRENT SURFACE USE: Winter range for elk and mule deer.

PROPOSED SURFACE DISTURBANCE: Proposed construction 3400 feet of access road and a well location 300'x 140' plus a 150' x 70' x10' reserve pit and soil stockpile storage outside the described area.

LOCATION OF EXISTING WELLS WITHIN A 1-MILE RADIUS: See 'TOPO C'

LOCATION OF PRODUCTION FACILITIES AND PIPELINES: Production equipment shall remain on location unless otherwise authorized by the Division, gas pipelines run along access road to existing tie in points.

SOURCE OF CONSTRUCTION MATERIAL: Native cut and fill using borrowed material

ANCILLARY FACILITIES: None requested

WILL DRILLING AT THIS LOCATION GENERATE PUBLIC INTEREST OR CONCERNS? (EXPLAIN): Probably not as there are several other wells in the Brundage, Cottonwood and Tabby Canyon area. However, some sportsmen have expressed concern with well development on UWR lands diminishing their value as big game habitat.

WASTE MANAGEMENT PLAN:

As detailed in UTE/FNR Standard Operating Procedure

ENVIRONMENTAL PARAMETERS

AFFECTED FLOODPLAINS AND/OR WETLANDS: None.

FLORA/FAUNA: Mixed grass lands frequently dominated with dense stands of pinion-juniper. Site is on a bench dominated by pinion and juniper. Other species include black sagebrush and squirrel tail, needle and thread grass, Indian ricegrass and shadscale. Area is classified as critical elk and deer winter range by the UDWR. Other species common include mountain lion, bobcat, rabbit, coyote and smaller birds and mammals.

SOIL TYPE AND CHARACTERISTICS: Deep medium brown sandy loam. Frequent brown surface rock erosion pavement.

SURFACE FORMATION & CHARACTERISTICS: Broad gentle north sloping bench with a few draws or swales. Planned access road and well site are in good locations relative to the topography.

EROSION/SEDIMENTATION/STABILITY: Current erosion is light. No stability problems are expected with pad construction and access to the location.

PALEONTOLOGICAL POTENTIAL: None observed during onsite

RESERVE PIT

CHARACTERISTICS: Proposed in cut on southeast side of location, measuring 70'x 150'x 10' deep.

LINER REQUIREMENTS (Site Ranking Form attached): 15 points. A liner is not required for the reserve pit.

SURFACE RESTORATION/RECLAMATION PLAN

According to Landowner Agreement and seed mixture provided by UDWR

SURFACE AGREEMENT: No

CULTURAL RESOURCES/ARCHAEOLOGY: A survey was completed by James A. Truesdale and submitted to DOGM and UDWR according to requirements. On Tribal Lands north of the Ute Tribal 11-18-54 well an old fence and possible corral has been constructed from pinion and juniper. The proposed road in this area was re-routed at the request of the Ute Indian Tribe.

OTHER OBSERVATIONS/COMMENTS

Mr. Ben Williams, representing the UDWR stated their landowner agreement will require that disturbance to elk and deer during the winter months be kept to a minimum. This requirement will include no access road construction or betterment, location construction, drilling or use of

work-over rigs during the period of Nov. 15- March 15 unless written permission is given to vary from any part of this restriction. Opportunities exist for habitat enhancement for big game in the area by removing and reseeding some of the dense pinion/juniper stands. A 150-acre area for pinion/juniper chaining or removal and seeding has been flagged in the area by the UDWR. Hal Writer, agent for UTE/FNR, agreed through an email to participate in this project.

1. General

Compliance with the requirements of Utah Admin. R. 649-1 *et seq.*, the Oil and Gas Conservation General Rules, and the applicable terms and provisions of the approved Application for permit to drill.

2. Notification Requirements

Notify the Division within 24 hours of spudding the well.

- Contact Carol Daniels at (801) 538-5284.

Notify the Division prior to commencing operations to plug and abandon the well.

- Contact Dan Jarvis at (801) 538-5338

3. Reporting Requirements

All required reports, forms and submittals will be promptly filed with the Division, including but not limited to the Entity Action Form (Form 6), Report of Water Encountered During Drilling (Form 7), Weekly Progress Reports for drilling and completion operations, and Sundry Notices and Reports on Wells requesting approval of change of plans or other operational actions.

4. State approval of this well does not supersede the required federal approval, which must be obtained prior to drilling.

5. Compliance with the Conditions of Approval/Application for Permit to Drill outlined in the Statement of Basis. (Copy Attached)

6. This proposed well is located in an area for which drilling units (well spacing patterns) have not been established through an order of the Board of Oil, Gas and Mining (the "Board"). In order to avoid the possibility of waste or injury to correlative rights, the operator is requested, once the well has been drilled, completed, and has produced, to analyze geological and engineering data generated therefrom, as well as any similar data from surrounding areas if available. As soon as is practicable after completion of its analysis, and if the analysis suggests an area larger than the quarter-quarter section upon which the well is located is being drained, the operator is requested to seek an appropriate order from the Board establishing drilling and spacing units in conformance with such analysis by filing a Request for Agency Action with the Board.

Split Estate – No Surface COAs per Melissa Hawk.

DOWNHOLE CONDITIONS OF APPROVAL

All provisions outlined in Onshore Oil & Gas Order #2 Drilling Operations shall be strictly adhered to. The following items are emphasized:

SITE SPECIFIC DOWNHOLE CONDITIONS OF APPROVAL

- None

DRILLING/COMPLETION/PRODUCING OPERATING STANDARDS

- There shall be no deviation from the proposed drilling, completion, and/or workover program as approved. Safe drilling and operating practices must be observed. All wells, whether drilling, producing, suspended, or abandoned, shall be identified in accordance with 43 CFR 3162.6. There shall be a sign or marker with the name of the operator, lease serial number, well number, and surveyed description of the well. Any changes in operation must have prior approval from the BLM, Vernal Field Office Petroleum Engineers.
- The spud date and time shall be reported orally to Vernal Field Office within 24 hours of spudding.
- **Notify Vernal Field Office Supervisory Petroleum Engineering Technician at least 24 hours in advance of casing cementing operations and BOPE & casing pressure tests.**
- Blowout prevention equipment (BOPE) shall remain in use until the well is completed or abandoned. Closing unit controls shall remain unobstructed and readily accessible at all times. Choke manifolds shall be located outside of the rig substructure.
- All BOPE components shall be inspected daily and those inspections shall be recorded in the daily drilling report. Components shall be operated and tested as required by Onshore Oil & Gas Order No. 2 to insure good mechanical working order. All BOPE pressure tests shall be performed by a test pump with a chart recorder and **NOT** by the rig pumps. Test shall be reported in the driller's log.
- BOP drills shall be initially conducted by each drilling crew within 24 hours of drilling out from under the surface casing and weekly thereafter as specified in Onshore Oil & Gas Order No. 2.
- Casing pressure tests are required before drilling out from under all casing strings set and cemented in place.
- No aggressive/fresh hard-banded drill pipe shall be used within casing.
- The lessee/operator must report all shows of water or water-bearing sands to the BLM. If flowing water is encountered it must be sampled and analyzed (a copy of the analyses to be submitted to the BLM Field Office in Vernal, Utah).
- All oil and gas shows shall be adequately tested for commercial possibilities, reported, and protected.
- The lessee/operator must report encounters of all non oil & gas mineral resources (such as gilsonite, tar sands, oil shale, etc.) to Peter Sokolosky or another geologist of the Vernal Field

Office in writing within 5 working days of each encounter. Each report shall include the well name/number, well location, date and depth (from KB or GL) of encounter, vertical footage of the encounter and, the name of the person making the report (along with a telephone number) should the BLM need to obtain additional information.

- All shows of fresh water and minerals shall be reported and protected. A sample shall be taken of any water flows and a water analysis furnished the BLM, Vernal Field Office. All oil and gas shows shall be adequately tested for commercial possibilities, reported, and protected.
- No location shall be constructed or moved, no well shall be plugged, and no drilling or workover equipment shall be removed from a well to be placed in a suspended status without prior approval of the BLM, Vernal Field Office. If operations are to be suspended for more than 30 days, prior approval of the BLM, Vernal Field Office shall be obtained and notification given before resumption of operations.
- Chronologic drilling progress reports shall be filed directly with the BLM, Vernal Field Office on a weekly basis in sundry, letter format or e-mail to the Petroleum Engineers until the well is completed.
- Any change in the program shall be approved by the BLM, Vernal Field Office. "Sundry Notices and Reports on Wells" (Form BLM 3160-5) shall be filed for all changes of plans and other operations in accordance with 43 CFR 3162.3-2.
- Emergency approval may be obtained orally, but such approval does not waive the written report requirement. Any additional construction, reconstruction, or alterations of facilities, including roads, gathering lines, batteries, etc., which will result in the disturbance of new ground, shall require the filing of a suitable plan pursuant to Onshore Oil & Gas Order No. 1 of 43 CFR 3164.1 and prior approval by the BLM, Vernal Field Office.
- In accordance with 43 CFR 3162.4-3, this well shall be reported on the "Monthly Report of Operations" (Oil and Gas Operations Report ((OGOR)) starting with the month in which operations commence and continue each month until the well is physically plugged and abandoned. This report shall be filed in duplicate, directly with the Minerals Management Service, P.O. Box 17110, Denver, Colorado 80217-0110, or call 1-800-525-7922 (303) 231-3650 for reporting information.
- Whether the well is completed as a dry hole or as a producer, "Well Completion and Recompletion Report and Log" (BLM Form 3160-4) shall be submitted not later than 30 days after completion of the well or after completion of operations being performed, in accordance with 43 CFR 3162.4-1. Two copies of all logs run, core descriptions, and all other surveys or data obtained and compiled during the drilling, workover, and/or completion operations, shall be filed on BLM Form 3160-4. Submit with the well completion report a geologic report including, at a minimum, formation tops, and a summary and conclusions. Also include deviation surveys, sample descriptions, strip logs, core data, drill stem test data, and results of production tests if performed. Samples (cuttings, fluid, and/or gas) shall be submitted only when requested by the BLM, Vernal Field Office.
- A cement bond log (CBL) will be run from the production casing shoe to the surface casing shoe and shall be utilized to determine the bond quality for the production casing. Submit a field copy of the CBL to this office.

- **Please submit an electronic copy of all other logs run on this well in LAS format to UT_VN_Welllogs@BLM.gov. This submission will supersede the requirement for submittal of paper logs to the BLM.**
- All off-lease storage, off-lease measurement, or commingling on-lease or off-lease shall have prior written approval from the BLM, Vernal Field Office.
- All measurement points shall be identified as point of sales or allocation for royalty determination prior to the installation of facilities.
- Oil and gas meters shall be calibrated in place prior to any deliveries. The Field Office Petroleum Engineers will be provided with a date and time for the initial meter calibration and all future meter proving schedules. A copy of the meter calibration reports shall be submitted to the BLM, Vernal Field Office. All measurement facilities will conform to the API standards for liquid hydrocarbons and the AGA standards for natural gas measurement.
- A schematic facilities diagram as required by Onshore Oil & Gas Order No. 3 shall be submitted to the BLM, Vernal Field Office within 30 days of installation or first production, whichever occurs first. All site security regulations as specified in Onshore Oil & Gas Order No. 3 shall be adhered to. All product lines entering and leaving hydrocarbon storage tanks will be effectively sealed in accordance with Onshore Oil & Gas Order No. 3.
- This APD is approved subject to the requirement that, should the well be successfully completed for production, the BLM, Vernal Field office must be notified when it is placed in a producing status. Such notification will be by written communication and must be received in this office by not later than the fifth business day following the date on which the well is placed on production. The notification shall provide, as a minimum, the following informational items:
 - Operator name, address, and telephone number.
 - Well name and number.
 - Well location (¼¼, Sec., Twn, Rng, and P.M.).
 - Date well was placed in a producing status (date of first production for which royalty will be paid).
 - The nature of the well's production, (i.e., crude oil, or crude oil and casing head gas, or natural gas and entrained liquid hydrocarbons).
 - The Federal or Indian lease prefix and number on which the well is located; otherwise the non-Federal or non-Indian land category, i.e., State or private.
 - Unit agreement and / or participating area name and number, if applicable.
 - Communitization agreement number, if applicable.
- Any venting or flaring of gas shall be done in accordance with Notice to Lessees (NTL) 4A and needs prior approval from Field Office Petroleum Engineers.
- All undesirable events (fires, accidents, blowouts, spills, discharges) as specified in NTL 3A shall be reported to the BLM, Vernal Field Office. Major events as defined in NTL3A, will be reported verbally within 24 hours, followed by a written report within 15 days. "Other than Major Events" will be reported in writing within 15 days. "Minor Events" will be reported on the Monthly Report of Operations and Production.
- Pursuant to Onshore Oil & Gas Order No. 7, this is authorization for pit disposal of water produced from this well for a period of 90 days from the date of initial production. A permanent

disposal method must be approved by this office and in operation prior to the end of this 90-day period. In order to meet this deadline, an application for the proposed permanent disposal method shall be submitted along with any necessary water analyses, as soon as possible, but no later than 45 days after the date of first production. Any method of disposal which has not been approved prior to the end of the authorized 90-day period will be considered as an Incident of Noncompliance and will be grounds for issuing a shut-in order until an acceptable manner for disposing of said water is provided and approved by this office.

- Unless the plugging is to take place immediately upon receipt of oral approval, the Field Office Petroleum Engineers must be notified at least 24 hours in advance of the plugging of the well, in order that a representative may witness plugging operations. If a well is suspended or abandoned, all pits must be fenced immediately until they are backfilled. The "Subsequent Report of Abandonment" (Form BLM 3160-5) must be submitted within 30 days after the actual plugging of the well bore, showing location of plugs, amount of cement in each, and amount of casing left in hole, and the current status of the surface restoration.

4989	gal	XL 8,20# sand laden fluid ramping 16/30 mesh Brady sand from 4 - 6 ppg
0	gal	3% KCL flush (screened out with 6 ppg sand in blender)

Formation broke at 8.2 bpm at 4155 psi. ATP: 2400 psi, Max TP: 3880 psi, AIR: 31 bpm & Max IR: 35 bpm. ISIP: N/A (screen out.) HHP: 1824. TLTR: 888 bbls.

Total sand pumped: 58700# 16/30 Brady sand. The job was cut short due to pressure increase while pumping 4.5 ppg bottom hole sand concentration. 38700# of sand was placed in the formation while 20,000# of sand was left in the casing. Flowed back well for 1-1/2 hours until sand cleared up. Attempted to re-frac zone #2 (Lower Castle Peak), was unable to re-frac due to high pump pressure and low rate. Displaced the remaining sand in wellbore with 145 bbls 3% KCl water and decision was made to move onto zone #3.

Set Halliburton 5-1/2" x 5K# composite frac plug #2 at 5605' and pressure tested frac plug & casing to 3000 psi.
