Re: Oil and Gas Conservation General Rules  
R649-3-3 Exception to Location and Siting of Wells.  
State Tribal No. 1-15D-54

Gentlemen:

Berry Petroleum Company is proposing to drill a development well in the Brundage Canyon Field, Duchesne County, Utah. The well is located on lands within the Uintah and Ouray Ute Indian Reservation. A copy of the Federal Application for Permit to Drill (APD) is attached for your review. This APD has been submitted to the Bureau of Land Management (BLM) in Vernal and the Bureau of Indian Affairs (BIA) at Ft. Duchesne.

As shown on the attached staking plat, the 1-15D-54 well is a directional well in which only the upper part of the objective section (uppermost Douglas Creek) falls outside of the allowed standard well spacing (R649-3-2). Berry is requesting an exception to the spacing requirement per regulation R649-3-3 since Berry was unable to locate the proposed well within the allowed spacing "window" due to topographic constraints. To maintain orderly 40 acre spacing and efficient well drainage, the well had to be drilled as a directional well from the UT 2-15-54 surface location. The rather long reach required of the well forced the uppermost part of the Douglas Creek objective section to be placed outside of the spacing "window".

In accordance with R649-3-3, Berry is providing a copy of the staking plat showing the proposed location in relation to the allowed spacing "window" and all tracts contacted by a circle with a radius of 460'. A second plat is also attached showing the actual or recently proposed location for all direct or diagonal offsetting wells. As to the 460' radius circle, Berry is also the owner of the adjacent NWNW of Section 14.

Berry is requesting approval of this excepted location as proposed. If additional information is required, please contact Dan Anderson at (303) 825-3344.

Sincerely,

Shelley E. Crozier

### Geologic Statement of Basis

The mineral rights for the proposed well are owned by the Ute Tribe. The BLM will be the agency responsible for evaluating and approving the drilling, casing and cementing programs.

### Surface Statement of Basis

The well site is proposed approximately 18.8 miles +/- south of Myton, Utah along Sowers Canyon Road to the Brundage Canyon road, then south 0.6 miles to the beginning point of a proposed access road then east and north 0.35 miles across an open flat and up a relative steep hillside to the proposed location. An existing low quality two-track road exists but is too steep to access the location.

Brundage Canyon has a broad bottom with numerous small side drainages forming alluvial fans as they reach the canyon bottom. The canyon runs in a northeasterly direction to its confluence with Sowers Canyon. Sowers Canyon contains a perennial stream, which flows easterly into Antelope Creek. Antelope Creek flows in a northerly direction to the Duchesne River. The general topography is canyon bottoms with steep sidewalls and side drainages.

The proposed State Tribal 1-15D-54 is a directional well on a twin location with the approved but not drilled State Tribal #2-15-54 well. One well will be drilled following the other by skidding the rig. The location is on a bench above a small side drainage. It was moved to this location to avoid the steep sidehills which would have made it necessary to complete extreme cuts. Very little evidence of significant overland flow occurs from the immediate area of location. Brundage Canyon does not have a flowing stream. Minor erosion and some sedimentation may occur from the side hill. A diversion ditch is planned around the southeast corner of the location into another small drainage to the south. Berry plans to drill the well using a closed loop mud circulation system. However if plans change a reserve pit will be constructed. No stability problems with the reserve pit are expected if a pit is used. The site appears to be an acceptable location for construction of a pad, drilling and operating the wells. It is the only suitable site in the immediate area.

The Utah Division of Wildlife Resources owns the surface for this location and the minerals are owned by the US Government and held in trust for the Ute Indian Tribe. Anna Figueroa of the BLM who represents the Ute Indian Tribe was invited to the pre-site evaluation. She attended and had no comments regarding the proposal. Ben Williams represented the UDWR at the review. He had no concerns regarding the proposal and stated they encourage multiple well pads to reduce surface disturbance. UDWR is acceptable to disposal of drilling cuttings on the location in a pile or by spreading on the site. Because of the closeness to the Brundage Canyon road and no forage for deer or elk exists in the immediate area of the location no seasonal restriction is warranted. No other wildlife is expected to be affected.

7. This proposed well is located in an area for which drilling units (well spacing patterns) have not been established through an order of the Board of Oil, Gas and Mining (the "Board"). In order to avoid the possibility of waste or injury to correlative rights, the operator is requested, once the well has been drilled, completed, and has produced, to analyze geological and engineering data generated therefrom, as well as any similar data from surrounding areas if available. As soon as is practicable after completion of its analysis, and if the analysis suggests an area larger than the quarter-quarter section upon which the well is located is being drained, the operator is requested to seek an appropriate order from the Board establishing drilling and spacing units in conformance with such analysis by filing a Request for Agency Action with the Board.

## OPERATING REQUIREMENT REMINDERS:

- All wells, whether drilling, producing, suspended, or abandoned, shall be identified in accordance with 43 CFR 3162.6. There shall be a sign or marker with the name of the operator, lease serial number, well number, and surveyed description of the well.
- In accordance with 43 CFR 3162.4-3, this well shall be reported on the "Monthly Report of Operations" (Oil and Gas Operations Report ((OGOR)) starting with the month in which operations commence and continue each month until the well is physically plugged and abandoned. This report shall be filed in duplicate, directly with the Minerals Management Service, P.O. Box 17110, Denver, Colorado 80217-0110, or call 1-800-525-7922 (303) 231-3650 for reporting information.
- Should the well be successfully completed for production, the BLM Vernal Field office must be notified when it is placed in a producing status. Such notification will be by written communication and must be received in this office by not later than the fifth business day following the date on which the well is placed on production. The notification shall provide, as a minimum, the following informational items:
  - Operator name, address, and telephone number.

In order to meet this deadline, an application for the proposed permanent disposal method shall be submitted along with any necessary water analyses, as soon as possible, but no later than 45 days after the date of first production. Any method of disposal which has not been approved prior to the end of the authorized 90-day period will be considered as an Incident of Noncompliance and will be grounds for issuing a shut-in order until an acceptable manner for disposing of said water is provided and approved by this office.

- Unless the plugging is to take place immediately upon receipt of oral approval, the Field Office Petroleum Engineers must be notified at least 24 hours in advance of the plugging of the well, in order that a representative may witness plugging operations. If a well is suspended or abandoned, all pits must be fenced immediately until they are backfilled. The "Subsequent Report of Abandonment" (Form BLM 3160-5) must be submitted within 30 days after the actual plugging of the well bore, showing location of plugs, amount of cement in each, and amount of casing left in hole, and the current status of the surface restoration.

**PROGRAM:**

- 1) Install surface production equipment and pumping unit.
- 2) NU frachead & BOPE. Load hole.
