We will use Schaffer blowout preventers with blind rams and pipe rams. Pipe rams will be fitted to drill in use. Pressure test to 500 psi before drilling out after cementing surface casing. Blind rams will be closed when drill pipe is out of hole and pipe rams will be closed daily to meet all safety requirements. Cement between the 4 1/1" casing and the hole will fill to 100' above the uppermost hydrocarbon zone in the area. All road and rehabilitation work will be coordinated with the BLM office in Moab, Utah

IN ABOVE SPACE DESCRIBE PROPOSED PROGRAM: If proposal is to deepen or plug back, give data on present productive zone and proposed new productive zone. If proposal is to drill or deepen directionally, give pertinent data on subsurface locations and measured and true vertical depths. Give blowout preventer program, if any.
