On July 2, 1981 a representative from this office met with Glenn Doyle USGS, and Larry D. Becker agent of the N.P. Energy Corporation for an inspection of the above referenced location. Subject to the attached conditions and written approval from USGS, I am approving the surface management portion of the Application for Permit to Drill.

The archaeological requirement has been fulfilled on this location. No threatened or endangered flora or fauna are indicated in the area.

Please forward the enclosed information to N.P. Energy Corporation.

Enclosures: (3)
1-Reclamation Procedures
2-Seed Mixture
3-Suggested Colors - Production Facilities

CONSTRUCTION:

- 1). The operator or his contractor will contact the Grand Resource Area Office in Moab, Utah (phone (801) 259-6111) 48 hours prior to beginning any work on public land.
- 2). The dirt contractor will be furnished with an approved copy of the surface use plan and any additional BLM stipulations prior to any work.
- 3). Use of water from sources such as wells, springs, streams, or stock ponds for activities associated with this well will be approved, prior to use, by the agency or individual holding the water right.
- 4). If subsurface cultural material is exposed during construction, work in that spot will stop immediately and the Grand Resource Area Office will be contacted. All employees working in the area will be informed by the operator that they will be subject to prosecution if they are caught disturbing archaeological sites or picking up artifacts. Salvage or excavation of indentified archaeological sites will only be done if damage occurs.
- 5). Improvement to the existing road will be necessary. The county road will be graded as needed. Low water crossings kept open, berms pulled and road width will remain the same.

The well pad will be 150'X250'.

Surface disturbance and vehicular travel will be limited to the approved location and approved access route. Any additional area needed will be approved in advnace.

Surfacing material will not be placed on the access road or location without prior BLM approval.

- 6). The top 8 inches of soil material will be removed from the location and stockpiled separate from the trees on the northwest side of the location.
- 7). The rserve pit will not be lined with commercial bentonite or plastic sufficient to prevent seepage. Keyway. The reserve pit banks will be 1.5 to 2.0 feet above pad and constructed in 8" lifts, machinery compacted, and sufficiently wide for equipment to pass over.
- 8). Three sides of the reserve pit will be fenced before drilling starts. The fourth side will be fenced as soon as the drilling is completed. The fence will be kept in good repair while the pit is drying. The fence will be woven wire, 36 inches high with two (2) strands of barbed wire at the top.

Production

1. The reserve pit and that portion of the location and access road not needed for production or production facilities will be reclaimed in the methods described in the rehabilitation section.
2. All above-ground production facilities will be painted using the attached suggested colors.
3. If oil is produced the loading valve will be kept inside the 4 foot berm surrounding the tanks.
4. Well can be drilled, but can't produce until 24-1 is properly plugged and abandoned.
5. No construction will be allowed between November 1 and April 30, until approved by the Area Manager.

Rehabilitation

1. Immediately upon completion of drilling, the location and surrounding area will be cleared of all debris resulting from the operation. All trash will be disposed of in the trash cage. Non-burnable debris will be hauled to a local town dump site.
2. The operator or his contractor will contact the Grand Resource Area BLM office in Moab, Utah, phone (801) 259-6111, 48 hours prior to starting rehabilitation work that involves earthmoving equipment and upon completion of restoration measures.
3. Before any dirt work to restore the location takes place, the reserve pit must be completely dry and any trash (bareels, metal etc.) it contains must be removed from the public lands.
4. All disturbed areas will be recontoured to blend as nearly as possible with the surrounding area.
5. The stockpiled topsoil will be evenly distributed over the disturbed area.
6. All disturbed areas will be scarified with the contour to a depth of 6-12 inches. Do not smooth pads out, leave a roughened surface.
7. Seed will be drilled at a time to be specified by the BLM with the following seed prescription.
8. After seeding is complete the access will be blocked to prevent any use.
9. Waterbars will be used as needed on all sloping surfaces as shown below:

PROCEDURE

1. Prepare location and access as needed for rig.
2. MIRU service rig with pump and tank. Prepare completion fluid by mixing KCl substitute to 4% equivalent, 1 gallon of biocide, and 5 gallons of non-ionic surfactant in 60 Bbls of produced water.
3. ND wellhead and install a BOP.
4. POOH with tubing. Lay down any tubing that appears damaged.
5. Tally and drift tubing while RIH with a 3-7/8" bit, 4-1/2" (10.5#) casing scraper to PDTD (2725'). Reverse circulate with 45 Bbls of completion fluid.
6. POOH 15 stands (~900') of tubing. RU and swab fluid level in well down to about 1700' from surface. RD swab and finish POOH with tubing.
7. RU wireline service. Run a GR-CCL from 2725' (PDTD) to 2100' and look for undocumented perforations in casing. Use a 3-1/8" retrievable hollow carrier loaded for 4 SPF on 90° phasing with 21 gram charges to perforate casing with 0.36" holes in the Morrison at 2622'– 2642' (20') and 2585'– 2605' (20'). Note fluid level in casing before perforating. RD wireline unit.
8. RIH with one joint of tubing, a 4-1/2" (10.5#) retrievable packer, and SN (or swab-stop) on 2-3/8" tubing and set packer where end of tubing is at about 2580' KB.
9. RU and swab to check fluid entry and water cut. Report initial fluid level, final fluid level, total swab runs, final swab runs per hour, final fluid recovery per hour, total fluid recovery, and final oil cut.

Note: If Morrison is oil productive as expected, arrangements will be made to fracture stimulate the well down 2-3/8" tubing using 40,000 lbs of 10-20 mesh sand and fluid as recommended by pumping service. In this case a subsequent procedure will be provided to fracture stimulate the Morrison, clean out, and run artificial lift equipment for producing the well. If the Morrison is not oil or gas productive, proceed as follows to plug back the Morrison and recomplete the Dakota.
10. POOH with tubing and packer.
11. RIH and set a CIBP at 2540' KB. POOH with tubing and setting tool.
12. RU wireline service. Use a 3-1/8" retrievable hollow carrier loaded for 4 SPF on 90° phasing with 21 gram charges to perforate casing with 0.36" holes in the Dakota at 2162'– 2178' (16') and 2136'– 2145' (9'). RD wireline unit.
13. RIH with one joint of tubing, a 4-1/2" (10.5#) retrievable packer, and SN (or swab-stop) on 2-3/8" tubing and set packer where end of tubing is at about 2580' KB.
14. RU and swab to check fluid entry and water cut. Report initial fluid level, final fluid level, total swab runs, final swab runs per hour, final fluid recovery per hour, total fluid recovery, and final oil cut.

15. Acidize Dakota perforations as directed. Materials and volumes will be based on swab results.
16. RU and swab for clean-up and rate. RD swab.
17. Release packer and POOH with tubing and packer.
18. RIH with tubing and equipment as directed to produce the well.
19. Land tubing, remove BOP, and install wellhead.
20. Rig down and move service rig off location.
21. Install surface equipment and facilities as needed to produce the well.

Hi Kimball,

We will be able to move forward with moving the statewide blanket bond from Rose to individual bonds with Rockies. Below is the break down of what Dustin is going to require for each well.

CPSKY PHLPS FEE 8-1 \$15,000

Thunderbird 1 \$1,500

State 32-1 \$15,000.00

State 16-42 \$30,000

State 1-34 \$30,000.00-Once you have final inspection on this well you can submit a letter requesting a bond release on the funds.

Bring a total of \$91,500.00. What I need from Rockies now is a Form 4B.2 on each well. The bond number is going to be the check number (1001696885), then if you could add an alpha character to the end (e.g 1001696885a, 1001696885b) this help to keep the records clear in our system.

Rockies currently has two cash bonds with the Division, but as a precaution if you could also submit a current IRS W-9 form for the bank that holds our bonds that would be greatly appreciated.

Also, to have a clear account, if you would submit a letter with the above forms stating that you're using the blanket bond as individual bond. Follow that up with a request to release the remaining \$28,500 that per the submitted agreement needs to be sent to Rockies Standard and the address we should mail the check to.

To answer Brad's question the two years audited financials would need to be reviewed by an independent certified public accountant.

If you have any question please let me know. In regards to this matter...because I am handling multiple task that take me away from my desk recently, if you try to call or email me and I'm not available you may call my cell phone [REDACTED]

Thanks!

RE: Moving Rose Blanket Bond to Rockies Individual Bonds 1001696885a, 1001696885b, 1001696885c, 1001696885d, and 1001696885e and Releasing Balance to Rockies

Enclosed is a completed Form 4B.2 for each of five wells recently acquired from Rose Petroleum (Utah), LLC (“Rose”) for which Rockies Standard Oil Company, LLC (“RSOC”) will assume operations. Rose assigned its blanket DOGM bond (1001696855) to Rockies, but Rockies requests that Rose’s statewide bond instead be used to bond these wells on an individual basis rather than blanket.

Rockies further requests that the balance of the Rose blanket bond (such balance in the amount of \$28,500.00) be released to Rockies at:

Rockies Standard Oil Company, LLC
Attn: Operations

Orem, UT 84097

Your help and prompt attention to this matter is greatly appreciated.
