Re: Surface Use Development Plan
Proposed Well
McElmo Creek Unit #K-17
763 FNL, 1898 FWL
Section 7, T41S, R25E
San Juan County, Utah

Dear Mr. McGrath:

The "Surface Use Development Plan" for the proposed McElmo Creek Unit Well #K-17 is as follows:

1. The existing roads and the location of the main highway exit are shown on the attached USGS topographic map.
2. A new 2000' X 30' access road is required, as shown on the attached plat. The proposed road will run south to the location and will be of compacted sand and gravel with a maximum grade of 6%. The road will be constructed so as to provide for adequate drainage. No major cuts or fills will be necessary.
3. The location and status of wells in the vicinity are shown on the attached plat.
4. The location of existing tank batteries, flow lines and lateral roads in the vicinity of the proposed well are shown on the attached plat. The 2-1/2" flow line for the proposed well will run 500' southwest to an existing flow line.
5. Water for drilling operations will be obtained from the San Juan River.
6. Materials necessary for the construction of the access road and drilling pad will be obtained directly from the construction site. No access roads for the purpose of hauling materials will be necessary.
7. Waste materials will be collected in earth pits. The perimeter of these pits will be fenced with small mesh wire. When drilling operations are complete these earth pits will be backfilled and leveled to the contour of the original landscape. Small portable trailer houses for the company and contract drilling personnel may be on the location. A sufficient number of OSHA approved chemical toilets will be provided and maintained.

8. No permanent campsites or airstrips are anticipated.
9. The location and position of drilling equipment is shown on the attached plat. Included on this plat is a cross section diagram showing cuts and fills necessary for the construction of the drilling pad. The drilling pad will be located approximately at ground level. Native materials from the immediate area will be used in its construction.
10. After the well is completed a 75' X 100' production pad will be constructed. All other disturbed areas not necessary to normal well maintenance will be returned as near as possible to the original contour that existed prior to the commencement of drilling operations.
11. The proposed drillsite is located on a sandstone outcrop near the San Juan River. Surface land is owned by the Navajo Tribe and is used primarily for grazing. Vegetation consists of sparse desert type ground cover and Tamarisks. There are no Indian habitations or artifacts in the immediate vicinity of the proposed drillsite, access road or flowline.

Very truly yours,

THE SUPERIOR OIL COMPANY

David G. Allison

I hereby certify that I, or persons under my direct supervision, have inspected the proposed drillsite and access route; that I am familiar with the conditions which presently exist; that the statements made in this plan are, to the best of my knowledge, true and correct; and that the work associated with the operations proposed herein will be performed by THE SUPERIOR OIL COMPANY and its contractors and sub-contractors in conformity with this plan and the terms and conditions under which it is approved.

To maximize effective corrosion control of metallic piping and structures down hole and above ground, Mobil Oil Corporation, Agent for Superior Oil Company, proposes to construct an electrified cathodic protection system consisting of a subsurface graphite anode bed connected to an above ground rectifier which has a lead connected to the well casing.

The construction will consist of a trench, 140' long, 6' deep and 2' wide in the old reserve pit area of the well location. All construction will be confined to existing disturbed area of well location. Existing electrical power to the well will be used for this cathodic protection system.

The construction area has previously been cleared archaeologically by J. Lee Correll of the Museum and Research Develop. of the Navajo Tribe, dated July 29, 1976 per 75-AZ-016.

SUPERIOR OIL COMPANY MERGER

Dear Mr. Firth:

On September 20, 1984, The Superior Oil Company (Superior) became a wholly owned subsidiary of Mobil Corporation. Since January 1, 1985, Mobil Oil Corporation (MOC), another wholly owned subsidiary of Mobil Corporation, has acted as agent for Superior and has operated the Superior-owned properties.

On April 24, 1986, Superior was merged with Mobil Exploration and Producing North America Inc. (MEPNA), which is also a wholly owned subsidiary of Mobil Corporation. MEPNA is the surviving company of the merger.

Procedure

Job Scope – Shut off existing Desert Creek (Zone I) production & complete Desert Creek (Zone 2C) via an open hole.

1. MIRU.
2. Pull & LD production equipment.
3. Clean out to 5738' (PBTD).
4. Cement squeeze Desert Creek - Zone I perforations (5650'-5678' & 5692'-5720').
5. Pressure test production casing to 1500 psig.
6. Drill out \pm 160' internal cement plug (5575' to 5738').
7. Pressure test squeezed perforations for leak-off.
8. Drill 4-3/4" open hole (vertical) from 5738' to 5880' (MD/TVD).
Well will TD base of Chimney Rock Shale (top of Akah zone of Paradox Fm.)
9. Install appropriate artificial lift.
10. RDMOL.
11. RWTP.

Recompletion Program

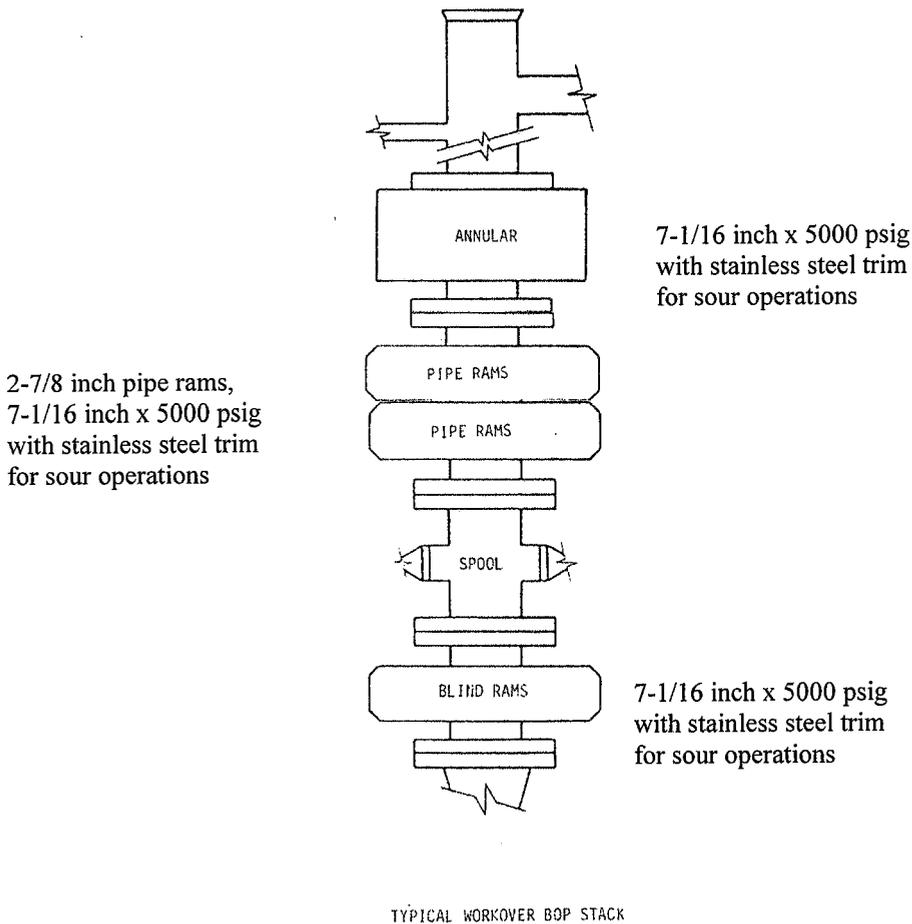

(1) Estimated tops of important geologic markers.

<u>Existing Formation Tops</u>	<u>(MD):</u>
Upper Ismay:	5504
Lower Ismay:	5578
Gothic Shale:	5641
Desert Creek:	5649

Projected Formation Tops (MD):

Desert Creek IIC:	5764
Desert Creek III:	5832
Chimney Rock Shale:	5858
Total Depth:	5880

- (2) The proposed operation is for deepening within the Paradox Formation.
- (3) Pressure Control Equipment and the testing procedures and testing frequency.

- (4) Deeping will be open hole of 4-3/4 inch Diameter from 5738 feet to 5880 feet.
- (5) The proposed operations will be completed with fresh water. If higher than anticipated bottom-hole pressures are encountered, C12 brine water or drilling mud with a salt polymer will be used.
- (6) Logging will be a single run triple combo (gamma ray, porosity, resistivity).

(7) Due to ongoing EOR injection, bottom-hole pressure of approximately 5000 psi (approx 3000 psig at surface) can be expected in the Desert Creek interval.

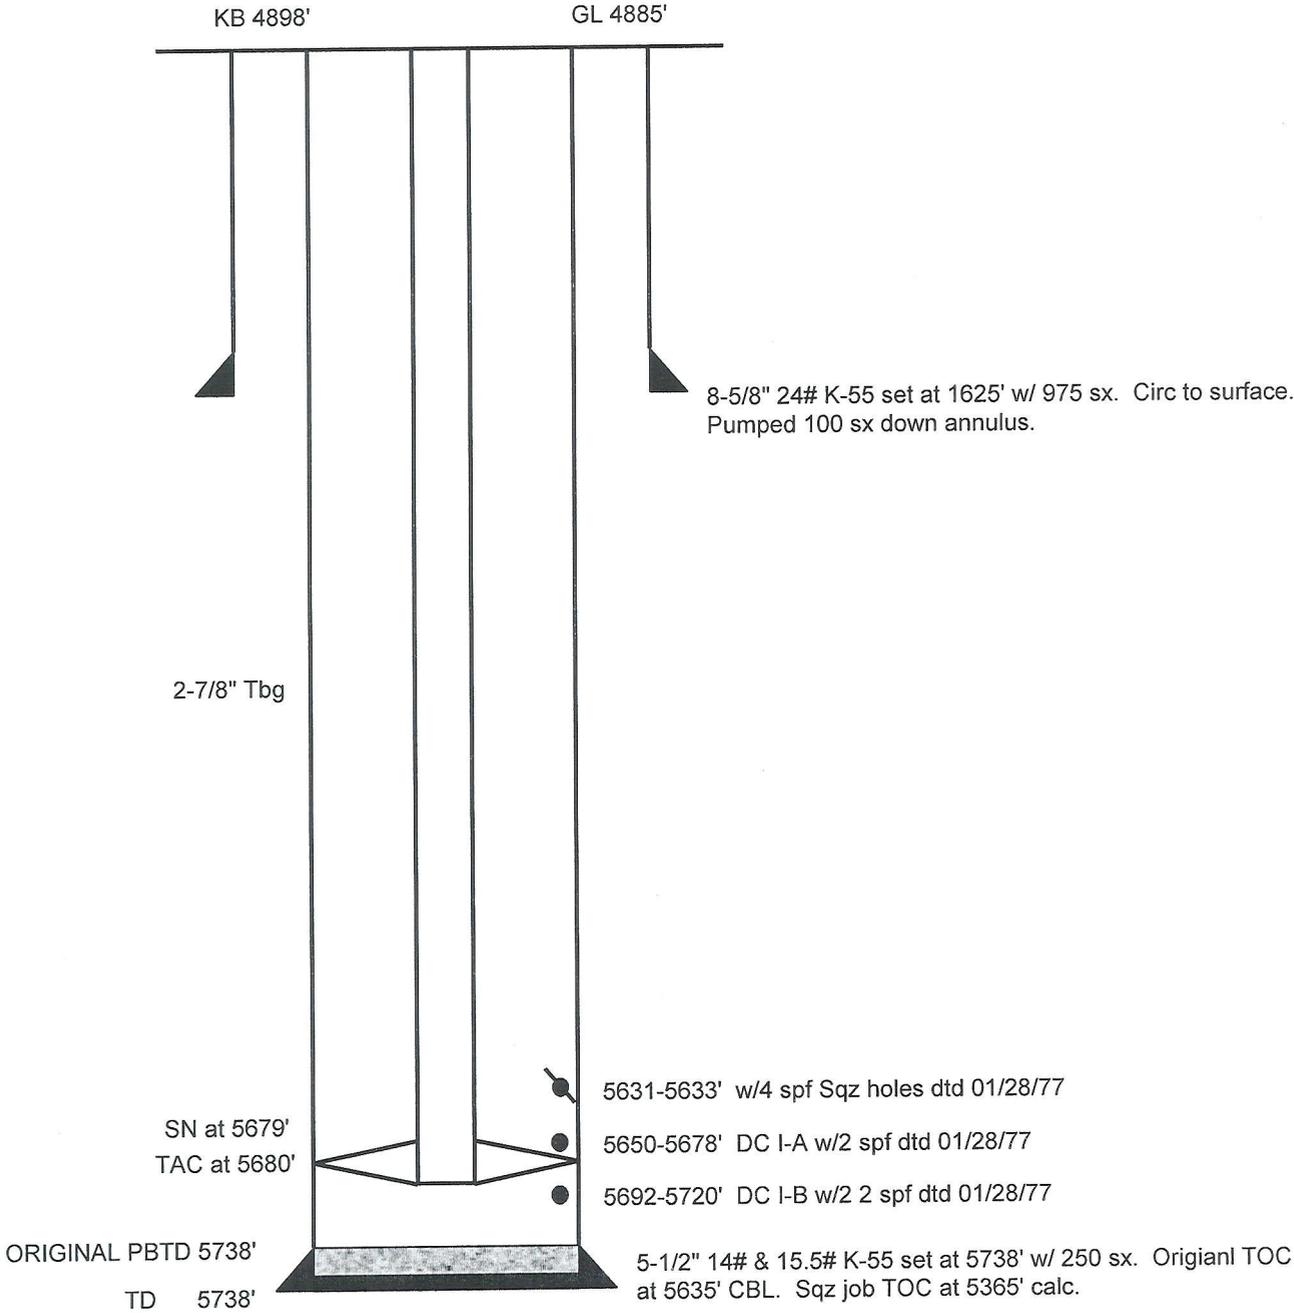

The Desert Creek interval in the Greater Aneth Oilfield is also known to contain concentrations of H₂S ranging from 100 to 10,000 parts per million.

All operations will be conducted in accordance with the applicable requirements of BLM *Onshore Order No. 6, Hydrogen Sulfide Operations* and the attached H₂S Operations and Contingency Plan. A copy of Section II of the H₂S Operations and Contingency Plan shall be available during operations at the wellsite.
