13 Point Surface Use Plan
for
Well Location
Ute Tribal 1-27
Located in
Section 27, T1S, R1E, U.S.B. & M.
Uintah County, Utah

1. EXISTING ROADS

See attached Topographic Map "A".

To reach Flying Diamond Oil Corporation well location Ute Tribal 1-27 located in the NW 1/4 SE 1/4 Section 27, T1S, R1E, U.S.B. & M., Uintah County, Utah; proceed Easterly out of Roosevelt, Utah along U.S. Highway 40, 5 miles to the junction of U.S. Highway 40 and the Highway to White Rocks, Utah; proceed North along the White Rocks Highway 7.25 miles to the junction of this road and a light duty service road to the East; proceed East and Southeasterly along this road 1.3 miles to the junction of this road and the proposed access road to be described in Item #2.

The Highways mentioned in the foregoing paragraph are bituminous surfaced roads to the beginning of the light duty service road which is a gravel surface road to the proposed access road.

There is no anticipated construction on any portion of the above described roads. They will meet the necessary standards required to facilitate an orderly flow of traffic during the drilling phase; completion phase and the production phase of this well at such time that production is established.

The roads that are required for access during the drilling phase, completion phase, and production phase of this well, will be maintained at the standards required by the Ute Indian Tribe governing or controlling agencies.

2. PLANNED ACCESS ROAD

See Topographic Map "B".

The proposed access road leaves the existing service road in the SE 1/4 SE 1/4 of Section 21, T1S, R1E, U.S.B. & M. and proceeds in an easterly direction along the South Section line of Section 22 to the SW 1/4 SE 1/4 of said Section 22; thence in a Southerly direction along the West line of the W 1/4 NE 1/4 and into the NW 1/4 SE 1/4 of Section 27 and then in an Easterly direction to the proposed well location site in the NW 1/4 SE 1/4 of Section 27. The approximate length of this road is 1.3 miles.

In order to facilitate the anticipated traffic flow necessary to drill and produce this well, the following standards will be met:

This proposed access road will be an 18' crown road (9' either side of the centerline) with drain ditches along either side of the proposed road where it is determined necessary in order to handle any run-off from normal meteorological conditions that are prevalent to this area.

Back slopes along the cut areas of the road will be 1 1/2 to 1 slopes and terraced.

The road will be centerline flagged prior to the commencement of construction.

The grade of this road will vary from flat to 8%, but will not exceed this amount. This road will be constructed from native borrow accumulated during construction.

If deemed necessary by the local governmental agencies or their representatives, turnouts will be installed for safety purposes every 0.25 miles or on the top of ridges or at intervals and locations that will provide the greatest sight distance. These turnouts will be 200' in length and 10' in width and will be tapered from the shoulder of the road for a distance of 50' in length at both the access and outlet ends.

PLANNED ACCESS ROAD - continued

Any fences that are encountered along this access road will be cut and replaced with a cattleguard with a minimum width of 18' and a loading factor large enough to facilitate the heavy trucks required in the drilling and production of this well.

If cattleguards are to be located at existing gates, they will be installed with the above requirements and with a new gate installed at one end of the cattleguard.

The access from the road to the gate will be of such a nature that there will be no impedance of traffic flow along the main access road and no difficulties encountered by traffic utilizing the gate, either leaving or entering the proposed access road.

The terrain that this road traverses is a relatively flat plain area located between the West Channel Uinta River and the East Channel Uinta River.

The vegetation along this route consists of sagebrush, grasses and cacti as the major flora with other types of flora encountered along the proposed route.

3. LOCATION OF EXISTING WELLS

There are other Flying Diamond Oil Corporation wells within a one-mile radius of this location (See Topographic Map "B"). For the exact location of this well in Section 27, T1S, R1E, U.S.B. & M., see the Location Plat.

For location of existing wells in the vicinity, see Topographic Map "B".

4. LOCATION OF TANK BATTERIES, PRODUCTION FACILITIES, AND PRODUCTION GATHERING AND SERVICE LINES

At the present time there are other Flying Diamond Oil Corporation batteries, production facilities, oil gathering lines, gas gathering lines, injection and disposal lines within a one-mile radius.

In the event that the production of this well is established, then the existing area of the location will be utilized for the establishment of the necessary production facilities. An additional area may be required to facilitate the necessary tank facilities.

This area will be built, if possible, with native materials and if these materials are not available, then the necessary arrangements will be made to get them from private sources.

The total area that is needed for the production of this well will be fenced and cattleguards will be utilized for access to these facilities.

In the event that production is established plans for a flowline to existing transmission lines will be submitted to the proper authorities.

If there are any deviations from the above paragraphs then all appropriate agencies will be notified prior to construction and all necessary requests and applications will be made.

5. LOCATION OF AND TYPE OF WATER SUPPLY

At the present time it is anticipated that the necessary water will be acquired from the main channel of the Uinta River that is approximately 2100' East of the location and will be pumped to the location.

If this water source is not available then the necessary arrangements will be made to acquire the water from other sources and will be hauled by truck over portions of the roads that are described in Items #1 and #2.

The local governmental agencies and any other parties involved will be notified and all governing guidelines and regulations will be strictly adhered to.

6. SOURCE OF CONSTRUCTION MATERIALS

All construction materials for this location site and access road shall be borrow materials accumulated during the construction of the location site and access road. No additional road gravels or pit lining material from other sources are anticipated at this time, but if they are required, the appropriate actions will be taken to acquire them from private sources.

The native materials that will be used in the construction of this location site and access road will consist of a sandy-clay soils and cobble rock gathered during the actual construction of the road and location.

7. METHODS FOR HANDLING WASTE DISPOSAL

See Location Layout Sheet.

A reserve and burn pit will be constructed.

The reserve pit will be approximately 8' deep and at least one half of this depth shall be below the surface of the existing ground.

One half of the reserve pit will be used as a fresh water storage area during the drilling of this well and the other one half will be used to store non-flammable materials such as cuttings, salts, drilling fluids, chemicals, produced fluids, etc.

If deemed necessary by the agencies concerned, to prevent contamination to surrounding areas the reserve pits will be lined with a gel.

The pits will have wire and overhead flagging installed at such time as deemed necessary to protect the water fowl, wildlife and domesticated animals.

At the onset of drilling, this reserve pit will be fenced on three sides and at the time the drilling activities are completed, it will be fenced on the fourth side and allowed to dry completely prior to the time that backfilling and reclamation activities are attempted.

When the reserve pit dries and the reclamation activities commence, the pits will be covered with a minimum of four feet of soil and all requirements in Item #10 will be followed.

The burn pits will be constructed and fenced on all four sides with a small mesh wire to prevent any flammable materials from escaping and creating a fire hazard.

All flammable materials will be burned and the residue will be buried upon completion of this well.

METHODS FOR HANDLING WASTE DISPOSAL - continued

A portable chemical toilet will be supplied for human waste.

8. ANCILLARY FACILITIES

There are no ancillary facilities planned for at the present time and none foreseen in the near future.

9. WELL SITE LAYOUT

See attached Location Layout Sheet.

The B.I.A. Representative shall be notified before any construction begins on the proposed location site and road.

As mentioned in Item #7, the pits will be unlined unless it is determined by the representatives of the agencies involved that the materials are too porous and would cause contamination to the surrounding area; then the pits will be lined with a gel and any other type of material necessary to make it safe and tight.

When drilling activities commence all work shall proceed in a neat and orderly sequence.

10. PLANS FOR RESTORATION OF SURFACE

As there is some topsoil on the location site, it shall be stripped and stockpiled. (See Location Layout Sheet and Item #9). When all drilling and production activities have been completed, the location site and access road will be reshaped to the original contour and the stockpiled topsoil spread over the disturbed area.

Any drainages re-routed during the construction activities shall be restored to their original line of flow as near as possible. Fences around the pits are to be removed upon completion of drilling activities and all waste being contained in trash pit shall be burned and the non-combustible materials buried with a minimum of 5' of cover.

As mentioned in Item #7, the reserve pit will be completely fenced and wired and overhead wire and flagging installed, if there is oil in the pits, it will be allowed to completely dry before covering.

Restoration activities shall begin within 90 days after completion of the well. Once completion activities have begun, they shall be completed within 30 days.

When restoration activities have been completed, the location site and access ramp shall be reseeded with a seed mixture recommended by the Ute Tribal District Manager when the moisture content of the soil is adequate for germination. The Lessee further covenants and agrees that all of said cleanup and restoration activities shall be done and performed in a diligent and most workmanlike manner and in strict conformity with the above mentioned Items #7 and #10.

11. OTHER INFORMATION

The Topography of the General Area (See Topographic Map "A").

The area is a large Basin formed by the Uinta Mountains to the North and the Book Cliff Mountains to the South and is part of what is known as the Uinta Basin.

11. OTHER INFORMATION - continued

The area is interlaced with numerous canyons and ridges formed in sandstone, cobble rock, conglomerates and shale deposits.

The majority of the larger drainages, draining from the Uinta Mountains are perennial streams which drain Southerly into the Green River, a major river in the area.

The majority of the smaller drainages are of a non-perennial nature with normal flow limited to the early spring run-off and extremely rare heavy thunderstorms or rain storms of high intensity that last over an extended period of time and are extremely rare in nature as the normal annual precipitation is only 8".

The soils of this semi-arid area are of the Uinta Formation and Duchense River Formation (the Fluvial Sandstone and Mudstone) from the Eocene Epoch and Quaternary Epoch (gravels surfaces) and the visiable soils (SM-ML) with poorly graded gravels and shales with outcrops of rock (sandstone, mudstone, conglomerates and shales).

Due to the low precipitation average, climatic conditions and the marginal types of soils, the vegetation that is found in the area is common of the semi-arid region we are located in and in the lower elevations of the Uinta Basin. It consists of, as primary flora, areas of sagebrush, rabbitbrush, some grasses and cacti, on the Upper benches with cottonwoods, beach, willows, Russian olives, and grasses along the lower levels close to the wet areas and streams.

There are areas within close proximity to this proposed location that have been and areas that are cultivated by man and some crops are raised which consist mostly of forage type crops and is then utilized as pasture.

The fauna of the area is sparse and consists predominately of the mule deer, coyotes, rabbits, and varieties of small ground squirrels and other types of rodents, and various reptiles common to the area.

The birds of the area are raptors, finches, ground sparrows, magpies, crows and jays.

The area is used by man for the primary purpose of grazing domestic livestock.

The Topography of the Immediate Area (See Topographic Map "B").

Ute Tribal 1-27 sits on a relatively flat area on what is known as Uinta Bottoms which separates the West Uinta River Drainage from the East Uinta River Drainage, both of which are perennial streams and drain into the Green River to the South.

The geologic structures of the area surrounding this location are from the Duchesne River Formation containing fluvial sandstones and mudstones from the Eocene Epoch and relatively younger alluvial deposits chiefly along the active stream beds.

The ground slopes from the North through the location to the South at approximately a 3% grade.

The location is covered with some sagebrush and grasses.

There are no occupied dwellings or other facilities of this nature in the general area.

OTHER INFORMATION - continued

There are no visible archaeological, historical, or cultural sites within any reasonable proximity of the proposed location site. (See Topographic Map "B").

NOW THEREFORE, in consideration of the mutual agreements and covenants set forth herein, the Constituent Corporations hereby agree, subject to the terms and conditions hereinafter set forth, as follows:

I. MERGER

1.1 Merger. 1.6 Effect of Merger. Upon the Effective Date of Merger, the separate existence of Flying J Uintah shall cease and Oil & Gas, as the Surviving Corporation: (i) shall continue to possess all of its assets, rights, powers and property as constituted immediately prior to the Effective Date of Merger, and shall succeed, without other transfer, to all of the assets, rights, powers and property of Flying J Uintah in the manner of and as more fully set forth in Section 71 of the Utah Business Corporation Act, and (ii) shall continue to be subject to all of its debts, liabilities and obligations as constituted immediately prior to the Effective Date of Merger and shall succeed, without other transfer, to all of the debts, liabilities and obligations of Flying J Uintah in the same manner as if Oil & Gas had itself incurred them, all as more fully provided under the applicable provisions of Section 71 of the Utah Business Corporation Act.

II. MANNER OF CONVERSION OF STOCK

At any time before the Effective Date of Merger, this Agreement may be terminated and the Merger may be abandoned for any reason whatsoever by the Board of Directors of either Flying J Uintah or Oil & Gas or both, notwithstanding the approval of this Agreement by Parent, as the sole shareholder of Flying J Uintah and Oil & Gas.

3.3 Amendment. The Boards of Directors of the Constituent Corporations may amend this Agreement at any time prior to the filing of Articles of Merger of a counterpart of this Agreement with the Utah Department of Commerce, provided that an amendment made subsequent to the approval of this Agreement by the Parent as the sole shareholder of the Constituent Corporations shall

not: (1) alter or change the amount or kind of shares, securities, cash, property and/or rights to be received in exchange for or on conversion of all or any of the shares of any class or series thereof of such Constituent Corporation; (2) alter or change any term of the Certificate of Incorporation of the Surviving Corporation to be effected by the merger or consolidation; or (3) alter or change any of the terms and conditions of this Agreement if such alteration or change would adversely affect the Parent as the holder of the Flying J Uintah Shares and the Oil & Gas Shares.

3.4 Registered Office. The registered office of the Surviving Corporation in the State of Utah is located at 50 West 990 South, Brigham City, Utah 84603. O. Jay Call is the registered agent of the Surviving Corporation at such address.

PROCEDURE

1. MIRUSU. Pump hot water down casing and RD pump jack. Unseat pump and flush tubing with hot water. Pull and lay down rods and pump. Rig for tubing, install BOPE, release TAC and POOH with tubing.
2. Pick up and run bit and scraper for 7" (32#) casing. Clean out to top of liner at 9812'. POOH. L/D BHA.
3. Pick up 94 joints of 2-3/8" tubing and run bit and scraper for 5" (18#) liner. Clean out to top of fish at 12,626'. POOH. L/D BHA.
4. RU wireline company and re-perforate the Wasatch in the following intervals using 3-3/8" expendable guns loaded 3 SPF with premium charges (0.4"+ EHD and 30"+ TTP in Berea) on 120° phasing. Correlate depths to Schlumberger Dual Induction Log dated 7/21/78 and 8/15/78.

11,804'- 812' (8')	11,896'- 900' (4')
11,820'- 823' (3')	12,526'- 534' (8')

(10 intervals, 48 feet, 144 perforations)

5. Hydrotest 2-3/8" and 2-7/8" tubing to 8500 psi while TIH with 5" (18#) RBP w/ extended ball catcher and a 5" (18#) stimulation packer. Set RBP at 12,600' and packer at ±12,230'.
6. Acidize lower Wasatch perforations (168 holes) with 10,000 gallons 15% HCl acid plus additives using 350 ball sealers for diversion. Flush to bottom perf at 12,589'.
Maximum Treating Pressure: Tubing 8000 psi
Maximum Rate: 10 BPM
Acid Additives: Corrosion Inhibitor, Mutual Solvent/Surfactant, Scale Inhibitor, Friction Reducer, Iron Control
7. Flow and swab to cleanup and test the lower Wasatch.
8. Move RBP to 12,040' and set packer at 12,030'. Pressure test tubing, packer, and RBP to 8000 psi. Reset packer at ±11,300'.
9. Acidize middle Wasatch perforations (284 holes) with 10,000 gallons 15% HCl acid plus additives using 600 ball sealers for diversion. Flush to bottom perf at 12,003'.
