(Location Subject to Survey Correction)

- (1) A total of about 60 feet of Dakota sand should be encountered; first should be about 25 feet of siltstone then about 30 feet of shale then about 60 feet of sand with thin shale breaks. This 60 feet of sand is the primary objective reservoir for gas production in this well.
- (2) The upper 25 feet of siltstone could be gas productive if encountered where the rock has been naturally fractured to form a reservoir.
