Federal Oil and Gas Leases

All lease and/or unit operations will be conducted in such a manner that full compliance is made with applicable laws, regulations (43 CFR 3100), Onshore Oil and Gas No. 1, and the approved plan of operations. The operator is fully responsible for the actions of his subcontractors. A copy of these conditions will be furnished the field representative to insure compliance.

1. Formation Tops

The estimated tops of important geologic markers are as follows:

<u>Formation</u>	<u>Depth</u>	<u>Prod. Phase Anticipated</u>
Uinta	Surface	
Green River	3114'	
Mahogany Ledge	3926'	
Mesa	5914'

CONDITIONS OF APPROVAL FOR NOTICE TO DRILL

Approval of this application does not warrant or certify that the applicant holds legal or equitable title to those rights in the subject lease which would entitle the applicant to conduct operations thereon.

Be aware fire restrictions may be in effect when location is being constructed and/or when well is being drilled. Contact the appropriate Surface Management Agency for information.

A. **DRILLING PROGRAM**

1. **Casing Program and Auxiliary Equipment**

As a minimum, the usable water and oil shale resources shall be isolated and/or protected by having a cement top for the production casing at least 200 ft. above the shallowest potential productive zone.

**SURFACE USE PROGRAM
Conditions of Approval (COAs)**

-Access roads and surface disturbing activities will conform to standards outlined in the Bureau of Land Management and Forest Service publication: Surface Operating Standards for Oil and Gas Exploration and Development, (1989).

The road shall be constructed/upgraded to meet the standards of the anticipated traffic flow and all-weather road requirements. Construction/upgrading shall include ditching, draining, and crowning (2 to 3%). Graveling or capping the roadbed will be required as necessary to provide a well constructed safe road. Prior to construction/upgrading, the proposed road surface or existing road shall be cleared of any snow cover and allowed to dry completely. Traveling off the 30 foot right-of-way will not be allowed. Should mud holes develop, they shall be filled in to prevent detours. Road drainage crossings shall be of the typical dry creek drainage crossing type. Crossings shall be designed so they will not cause siltation or accumulation of debris in the drainage crossing nor shall the drainage be blocked by the roadbed. Erosion of drainage ditches by runoff water shall be prevented by diverting water off at frequent intervals by means of cutouts. Upgrading shall not be allowed during muddy conditions. When snow is removed from the road during the winter months, the snow shall be pushed outside of the burrow ditches and the turn outs shall be kept clear so that when the snow melts the water will be channeled away from the road.

Shenandoah Energy will control noxious weeds along the right-of-way for roads, pipelines, well sites or other applicable facilities. If noxious weeds spread from disturbed areas onto adjoining lands, Shenandoah shall be responsible for control of the infestation. A list of noxious weeds may be obtained from the BLM, or the appropriate County Extension Office. On BLM administered land it is required that a Pesticide Use Proposal shall be submitted, and given approval, prior to the application of herbicides or other pesticides or possible hazardous chemicals.

-4 to 6 inches of topsoil shall be stripped from the location and windowed on the south end of the location as shown on the cut sheet. This topsoil shall be seeded as described in the standard operating plan with the recommended seed mix shown below.

-The pipeline disturbance will be kept to a 30' width. The topsoil shall be stripped and windowed along the edge of the cleared area, then replaced prior to seeding the disturbed area. Care shall be taken not to mix the topsoil with the subsoil from the trench. Water bars shall be installed along the pipeline routes at 100 foot intervals wherever the slope of the pipelines exceed 7 %. The water bars will be constructed in accordance with the guidelines outlined on page 34 of the third edition of the Surface Operating Standards For Oil and Gas Exploration and Development (1989).

-The following seed mix shall be used to seed the topsoil pile, pipeline disturbance, reserve pit and for final abandonment:

Fourwing saltbush	Atriplex canescens	4 lbs./acre
Gardner saltbush	Atriplex gardneri	4 lbs./acre
Western wheatgrass	Agropyron smithii	4 lbs./acre

All poundages are in pure live seed.

The seeding of the reserve pit shall be done in the same manner as the seeding of the topsoil pile, however, seeding of the pipeline disturbance and the location after final abandonment could be completed by drilling the seed, broadcasting the seed and dragging the disturbed area to cover the seed, or by broadcasting the seed then walking it in with a dozer.

All seeding shall be done immediately after the dirt work has been completed.

The reserve pit shall be lined with a plastic nylon reinforced liner. It will be a minimum of 12 mil thickness with sufficient bedding (either straw or dirt) to cover any rocks. The liner will overlap the pit walls and be covered with dirt and/or rocks to hold it in place. No trash, scrap pipe, etc., that could puncture the liner will be disposed of in the pit.

Pipeline and Flowline Reclamation

Reclamation and abandonment of pipelines and flowlines may involve replacing fill in the original cuts, reducing and grading cut and fill slopes to conform to the adjacent terrain, replacement of surface soil material, waterbarring and revegetating in accordance with a reclamation plan.

Pipeline trenches are to be compacted during backfilling and must be maintained to correct backfill

settling and prevent erosion. Waterbars and other erosion control devices must be repaired as necessary. Pipeline routes shall not be used for roads unless they are properly constructed and authorized for such purposes.

Abandoned pipeline routes must be waterbarred as shown in Figure 10. Supplemental guidelines and methods may be available that reflect local site and geographic conditions. These guidelines or methods may be obtained from the local BLM/SMA office.

Narrative:

This well was drilled in October 2000 and completed in November 2000. The wellbore consists of perfs. in the Gt7; Gx3; Gy2; Lu6; Lv5; Lw4 zones with the Ly2 and Mesa 3 and Mesa 2 zones isolated with a CIBP. The proposal to convert this well into an injection well will be performed by initiating injection into the existing perfs. in the wellbore above the CIBP. A bottom hole pressure (BHP) survey will be conducted prior to injection along with an MIT test.

TD @ 6089'

Conversion Procedure

1. MIRU completion rig. POOH with rods and pump and lay down. NU BOP's and POOH with 2-7/8" tubing. RIH with 4-3/4" bit and 5-1/2" csg. scraper and tbg. to PBTD of ~5800'. Circulate the hole with hot 2% KCL water and POOH with bit and scraper.
2. RIH with Arrowset I pkr. and set at ~5530' after circulating packer fluid.
3. Perform MIT test of casing to >1000# and run a BHP survey with bombs hanging at ~5600'.
4. Turn well over to production department to start well injection.

RE: RWU # 34-13A, UIC # UT2922-04643

Dear Mr. Craver;

Enclosed for the MIT repair work for the subject well, are the following items:

MIT Pressure Data and Graph
Well Rework Record form 7520-12
Updated Well-bore Diagram
MIT Casing or Annulus Pressure Test form
Daily Work Report

It was discovered that the well had a pressure build up on the annulus on March 27, 2003. The subsequent repairs have corrected the problem and the well passed the MIT. Injection in the well will not begin until re-authorization to resume injection is granted by the EPA.

If you have any questions or need additional information, I can be reached in Denver at (303) 308-3052. Thank you for your time in this matter.

Sincerely,

Scott M. Webb
Regulatory Coordinator

(SEI), iii) Shenandoah Energy, Inc. has now been re-named **QEP Uinta Basin, Inc.** pursuant to a State of Delaware Amended and Restated Certificate of Incorporation, iv) the same employees will continue to be responsible for operations of the former SOC and SEI properties, both in the field and in the office. Gentlemen:

On April 12, 2007, we received an indenture dated April 6, 2007, whereby QEP Uinta Basin, Inc. resigned as Unit Operator and Questar Exploration and Production Company was designated as Successor Unit Operator for the Red Wash Unit, Uintah County, Utah.

This indenture was executed by all required parties and the signatory parties have complied with Sections 5 and 6 of the unit agreement. The instrument is hereby approved effective April 23, 2007. In approving this designation, the Authorized Officer neither warrants nor certifies that the designated party has obtained all required approval that would entitle it to conduct operations under the Red Wash Unit Agreement.

Your nationwide oil and gas bond No. ESB000024 will be used to cover all federal operations within the Red Wash Unit.

It is requested that you notify all interested parties of the change in unit operator. Copies of the approved instruments are being distributed to the appropriate federal offices, with one copy returned herewith.
