Be aware fire restrictions may be in effect when location is being constructed and/or when well is being drilled. Contact the appropriate Surface Management Agency for information.

A. DRILLING PROGRAM

1. Casing Program and Auxiliary Equipment

As a minimum, the usable water and oil shale resources shall be isolated and/or protected by having a cement top for the production casing at least 200 ft. above the base of the usable water, identified at $\pm 2,450$ ft.

**SURFACE USE PROGRAM
CONDITIONS OF APPROVAL (COAs)**

-Access roads and surface disturbing activities will conform to standards outlined in the Bureau of Land Management and Forest Service publication: Surface Operating Standards for Oil and Gas Exploration and Development, (1989).

The road shall be constructed/upgraded to meet the standards of the anticipated traffic flow and all-weather road requirements. Construction/upgrading shall include ditching, draining, and crowning (2 to 3%). Graveling or capping the roadbed will be required as necessary to provide a well constructed safe road. Prior to construction/upgrading, the proposed road surface or existing road shall be cleared of any snow cover and allowed to dry completely. Traveling off the 30 foot Right-of-Way (ROW) will not be allowed. Should mud holes develop, they shall be filled in to prevent detours. Road drainage crossings shall be of the typical dry creek drainage crossing type. Crossings shall be designed so they will not cause siltation or accumulation of debris in the drainage crossing nor shall the drainage be blocked by the roadbed. Erosion of drainage ditches by runoff water shall be prevented by diverting water off at frequent intervals by means of cutouts. Upgrading shall not be allowed during muddy conditions. When snow is removed from the road during the winter months, the snow shall be pushed outside of the borrow ditches and the turn outs shall be kept clear so that when the snow melts the water will be channeled away from the road.

Shenandoah Energy will control noxious weeds along the ROW for roads, pipelines, well sites or other applicable facilities. If noxious weeds spread from disturbed areas onto adjoining lands, Shenandoah shall be responsible for control of the infestation. A list of noxious weeds may be obtained from the BLM, or the appropriate County Extension Office. On BLM administered land it is required that a Pesticide Use Proposal shall be submitted and given approval prior to the application of herbicides or other pesticides or possible hazardous chemicals.

A paleontologist shall be present during the construction of this location to monitor construction of the new access road, pad and pit.

If cultural resources or paleontological resources are found, the BLM Authorized Officer shall be notified. Procedures described in the Standard Operating Practices for Wonsits Valley Unit Wasatch Formation Wells will be followed as such finds are evaluated.

No construction or drilling activities shall be allowed on this location during the ferruginous hawk nesting season of March 1 through July 15. This requirement may be waived after May 31 if a qualified wildlife biologist determines that no hawk nesting activity is occurring within one half mile of the project by May 31.

Four to six inches of topsoil shall be stripped from the location and windrowed on the east end of the location between corners 2 and 3. This topsoil shall be seeded as described in the standard operating plan with the recommended seed mix shown below.

The following seed mix shall be used to seed the topsoil pile, pipeline disturbance, reserve pit and for final abandonment:

Fourwing saltbush	Atriplex canescens	4 lbs./acre
Needle and threadgrass	Stipa comata	4 lbs./acre
Indian ricegrass	Oryzopsis hymenoides	4 lbs./acre

All poundages are in pure live seed.

The seeding of the reserve pit shall be done in the same manner as the seeding of the topsoil pile. However, seeding of the location after final abandonment can be completed by drilling the seed, broadcasting the seed and dragging the location to cover the seed; or by broadcasting the seed then walking it in with a dozer.

All seeding shall be done immediately after the dirt work has been completed.

A pit liner will be required to prevent seepage into the adjacent drainage.

No blading will be allowed on the surface pipeline.

No pipeline construction will be allowed when soils are muddy and rutting of soils becomes apparent from the use of vehicles. If rutting occurs, operations must cease until soils are dry or frozen.

Seeding may be required if surface damage is done during the pipeline construction.

The pipe will be welded together on the well location and the pipe dragged into place.
