2. Notification Requirements

Notify the Division within 24 hours of spudding the well.

5. This proposed well is located in an area for which drilling units (well spacing patterns) have not been established through an order of the Board of Oil, Gas and Mining (the "Board"). In order to avoid the possibility of waste or injury to correlative rights, the operator is requested, once the well has been drilled, completed, and has produced, to analyze geological and engineering data generated therefrom, as well as any similar data from surrounding areas if available. As soon as is practicable after completion of its analysis, and if the analysis suggests an area larger than the quarter-quarter section upon which the well is located is being drained, the operator is requested to seek an appropriate order from the Board establishing drilling and spacing units in conformance with such analysis by filing a Request for Agency Action with the Board.

- "In compliance with the stated objectives of the Federal Regulations for Onshore Oil & Gas Operations and the applicable Federal Unit Agreement, Questar Exploration and Production Company hereby requests the commingling of production between intervals in the WRU-EIH 8MU 35-8-22. Questar considers this commingling to be in the public interest in that it promotes maximum ultimate economic recovery, prevents waste, provides for orderly and efficient production of oil and gas and presents no detrimental effects from commingling the two gas streams. Questar requests approval for the commingling between the Mesa Verde and Wasatch intervals. The proposed method to determine the allocation of production between the intervals is described below:**
- 1 - Three Wasatch Zones located at these depths: 6212' - 6222'; 6520' - 6528' & 6670' - 6674' and three Mesa Verde Zones located at 7786' - 7802'; 8348' - 8354' & 8392' - 8398' will be placed on production for a minimum of 90 days to stabilize production. At that time a gas sample will be taken and analyzed to serve as a baseline.**
- 2 - The initial allocation is being estimated from the net pay of the Mesa Verde and Wasatch formations. That allocation would be:**
Mesa Verde Production: 63% - for 29' of net pay
Wasatch Production: 37% - for 17' of net pay
- 3 - After the well is stabilized a production survey will be run across all of the zones to determine the allocation of produced gas from the Mesa Verde and the Wasatch.**
- 4 - If the production survey demonstrates that the allocation rates are different by more than 2% from the estimated allocation, the OGOR Report will be amended to reflect those changes.**
- 5 - On an annual basis the gas will be sampled and a determination will be made of the BTU content and gas constituents. These annual samples can be used to determine if the gas allocation is changing over time. If these samples do not indicate that any adjustments in allocation are necessary they may be discontinued after the fifth anniversary of the initial production.**

API #43-047-35195

“In compliance with the stated objectives of the Federal Regulations for Onshore Oil & Gas Operations and the applicable Federal Unit Agreement, Questar Exploration and Production Company hereby requests the commingling of production between intervals in the WRU-EIH 8MU 35-8-22. Questar considers this commingling to be in the public interest in that it promotes maximum ultimate economic recovery, prevents waste, provides for orderly and efficient production of oil and gas and presents no detrimental effects from commingling the two gas streams.

Questar requests approval for the commingling between the Mesa Verde and Wasatch intervals. The proposed method to determine the allocation of production between the intervals is described below:

1 – Three Wasatch Zones located at these depths: 6212’ – 6222’; 6520’ – 6528’ & 6670’ – 6674’ and three Mesa Verde Zones located at 7786’ – 7802’; 8348’ – 8354’ & 8392’ – 8398’ will be placed on production for a minimum of 90 days to stabilize production. At that time a gas sample will be taken and analyzed to serve as a baseline.

2 – The initial allocation is being estimated from the net pay of the Mesa Verde and Wasatch formations. That allocation would be:

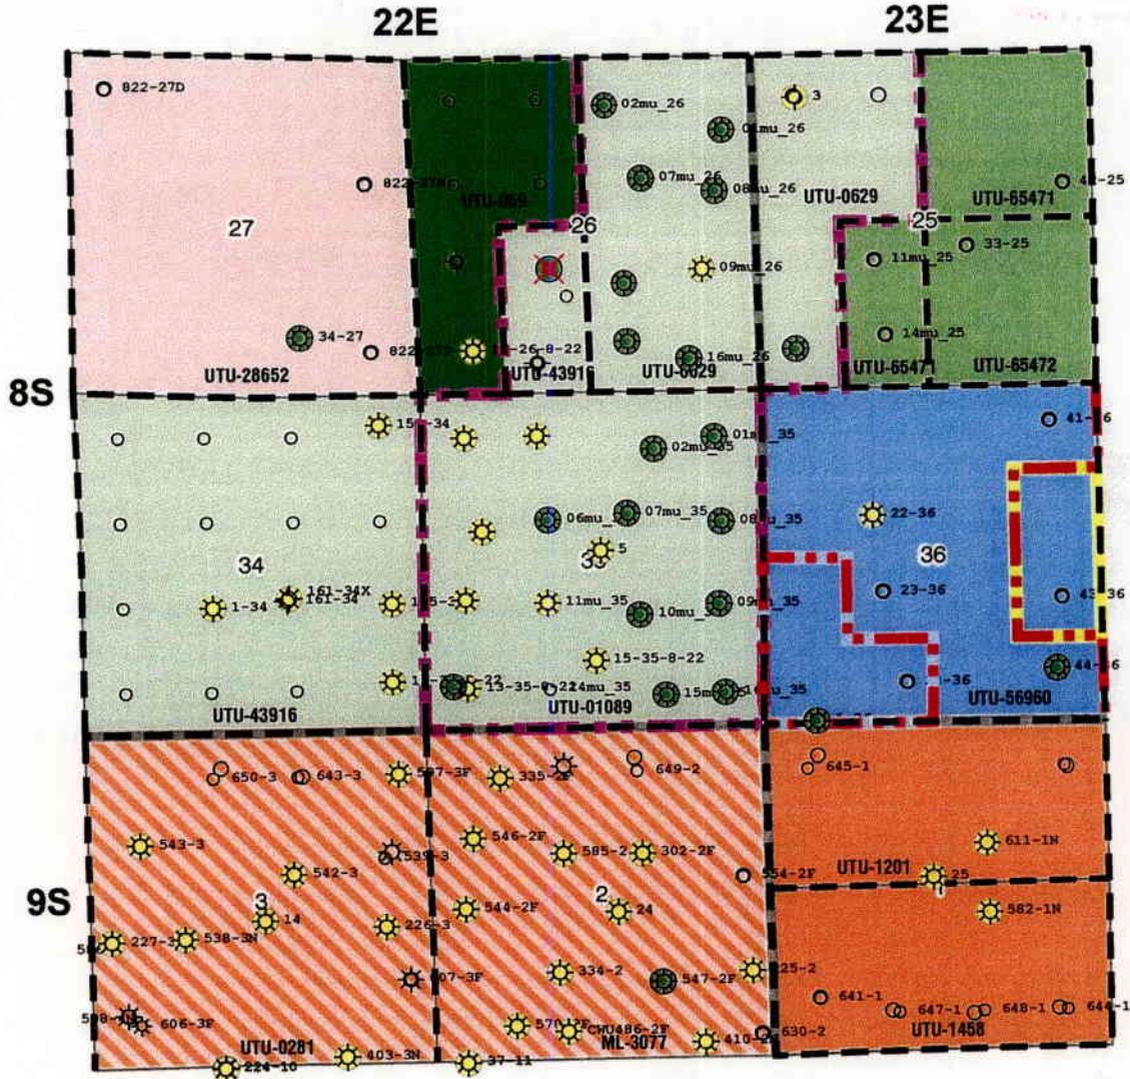

Mesa Verde Production: 63% - for 29’ of net pay

Wasatch Production: 37% - for 17’ of net pay

3 – After the well is stabilized a production survey will be run across all of the zones to determine the allocation of produced gas from the Mesa Verde and the Wasatch.

4 – If the production survey demonstrates that the allocation rates are different by more than 2% from the estimated allocation, the OGOR Report will be amended to reflect those changes.

5 – On an annual basis the gas will be sampled and a determination will be made of the BTU content and gas constituents. These annual samples can be used to determine if the gas allocation is changing over time. If these samples do not indicate that any adjustments in allocation are necessary they may be discontinued after the fifth anniversary of the initial production.

Operator has commingled the Mesaverde and Wasatch Intervals. Three Wasatch zones were perforated at 6212' to 6222', 6520' to 6528', 6670' to 6674', and three Mesaverde zones were perforated at 7786' to 7802', 8348' to 8354' and 8392' to 8398'. The well was placed on production for 90 days and production allowed to stabilize. After that period, a gas sample was taken and analyzed to serve as a baseline.

The initial allocation was estimated based upon the net pay of the Mesaverde and Wasatch formations and determined to be:

Wasatch 37%
Mesa Verde 63%

A production survey was planned to determine accuracy of the initial allocation.

In Compliance with the Administrative Utah code for drilling and operating practice R649-3-22, completion into two or more pools. Questar Exploration & Production Company hereby requests the commingling of production between intervals in the WRU EIH 8MU-35-8-22. Questar considers this commingling to be in the public interest in that it promotes maximum ultimate economic recovery, prevents waste, provides for orderly and efficient production of oil and gas and presents no detrimental effects from commingling the gas streams.

Questar requests approval for the commingling of production of the Mesa Verde and Wasatch intervals. Based upon offset production logs, the proposed initial allocation is as follows: Mesa Verde - 29% ; Wasatch - 71%.

On an annual basis the gas will be sampled and a determination will be made of the BTU content and gas constituents. These annual samples can be used to determine if the gas allocation is changing over time. If these samples do not indicate that any adjustments in allocation are necessary they may be discontinued after the fifth anniversary of the initial production.
