The Ground Water Protection Council invites your participation in the first Water/Energy Sustainability Symposium at the GWPC 2009 Annual Forum, co-sponsored by the U.S. Department of Energy, held at the Hilton Salt Lake City Center.

This unique Symposium will explore the complex relationships between water resources, quality, and sustainability, and energy development and generation, with the goals of informing policy decisions at state and federal levels.

Nothing is more vital to life on our planet than water--a finite and vulnerable resource. Correspondingly, the demand for greater quantities and additional sources of energy is increasing rapidly. Much like siblings, these two entities both depend on and compete with each other.

Just one example: 39% of all water used in the US is for electricity production--450 gallons per person each day. Treatment and delivery of water for individuals and industry requires vast amounts of energy--and vice versa.

Abstracts should inform participants about cutting-edge studies, research, processes, and programs designed to coordinate the use of water and energy in a manner that recognizes and refines the rapidly transforming and interdependent nature of these resources.

[Apply Now](#) to be part of our Water/Energy Sustainability Symposium. Deadline for Abstract Submission is April 1st, 2009.

Sincerely,

Mike Paque  
Executive Director  
The Ground Water Protection Council
