

UTAH DIVISION OF OIL, GAS & MINING

**MONTHLY OIL AND GAS
PRODUCTION REPORT – BY FIELD**

All oil and gas well operators in Utah are required to submit monthly production reports to the Division of Oil, Gas and Mining. This publication is a summary of those reports, giving detail by field.

■ **Units of Measure**

1. Oil production is measured in Barrels (42 U.S. gallons) and abbreviated as “BBL”.
2. Gas production is measured in Thousand Cubic Feet and abbreviated as “MCF”.

■ **Production by Field**

- All oil and gas fields with “active” wells (i.e, wells in a producing, shut-in, or temporarily-abandoned status during the report month) are listed on the report.
- All oil and gas fields that have any cumulative production are listed on the report, even if they no longer have any active wells.

■ **Report Accuracy**

Substantial effort is made to create an accurate report, however errors may occasionally occur. Discovery of any discrepancies may be reported to the division by calling (801) 538-5331.

■ **Frequency of Report Generation**

Each web report is created when a majority of operators have submitted their reports to the division for each calendar month. The web reports are generally run once and not updated at a later time to include amendments made by well operators or the division.
