

Disposition Data Download File

The Disposition Data file contains monthly disposition report data for each Entity, as submitted by operators, dating back to April 1984. An Entity is defined as a well or a group of wells that have identical division of interest, have the same operator, produce from the same formation, have product sales from a common tank, LACT meter, gas meter, or are in the same participating area of a properly designated unit. There are two separate records for each entity, one for oil and one for natural gas. Disposition reports are filed each month in conjunction with the Monthly Oil and Gas Production Report.

Below is a description of each data field in the file

FIELD NAME	DESCRIPTION
ReportPeriod	Month and year of production.
Operator	Company that currently operates the wells being reported on.
Oper_No	Account number of the current well operator.
Old_Oper_No	Old account number of the current well operator used in a previous database (discontinued).
EntityNumber	A 5-digit number assigned by the division that represents a well or group of wells that have a common operator, produce from the same formation, have identical division of ownership interest, and have a common sales point, or, are in the same participating area of a properly designated unit. It is used by the Division to record oil and gas disposition data. Other state agencies use it for tracking ownership information of oil and gas sales. This is a KEY data field for linking to the Monthly Oil and Gas Production Reports.
Product	Oil or Gas (natural gas).
Gravity	Average heating content of the oil sold.
BTU	Average heating content of natural gas transported.
BeginningInventory	Total volume of oil on hand in stock tanks at the producing Entity at the beginning of the report period. This volume should correspond to the Ending Inventory on the previous month's report.
VolumeProduced	Volume of oil (bbl - barrels) or natural gas (mcf - thousand cubic feet) produced from the wells in the Entity during the report period. This volume should match the total well production volumes for each product reported on the Monthly Oil and Gas Production Report for the corresponding Entities.
VolumeTransported	Volume of oil (bbl - barrels) or natural gas (mcf - thousand cubic feet) physically removed from the Entity location by sale or other accounting arrangement, during the report period.
VolumeUsedOnSite	Volume of produced oil or natural gas used at the producing location for Entity operations.
Vol.VentedFlared	Volume of produced natural gas vented to the air, or flared (burned) at the Entity location.

Other	Volume of oil or natural gas disposed of in a manner other than one of those listed above, such as spills, leaks, or other unusual dispositions.
EndingInventory	Total volume of oil on hand in stock tanks at the producing Entity at the end of the report period.
ReportReceivedDate	Date the Disposition report was received by the Division from the operator of the wells.
Amended?	Data flag (Yes or No) that indicates whether the report has been amended or not.
